

Raw transcript of interview:

Graham and John Interview John Ruddick...

Publish

January 22, 2024 5:00 pm AEST

Well, G'day everybody and welcome to Club Grubbery. And the date today is the 19th of January, the years slipping by, the months slipping by. Johnny Larder, welcome and good to have you back on. Thanks, Woody. Yeah. Great to be, uh, back and, uh, some big things happening. Some big things happening. Also, welcome to you, John Ruddock, who is the head of the Libertarian Party in Australia.

Well done. John Ruddock, great to have you on the program. It's always a good interview when we have you on, and we appreciate your time to be with us today. Happy New Year, gentlemen. Good to see you. Thanks, mate. Let's hope it's a happy New Year. We hear you've been traveling. Tell us about that. Well, I've been to Argentina and back, uh, with, uh, Ross Cameron, who's the president of the Libertarian Party.

Now, we, I should tell the viewers that, uh, the Liberal Democrats have now officially changed their name to the Libertarian Party. And two days after that was, uh, all done and dusted, Javier Mele wins 56 percent of the vote in the presidential election in Argentina. Now, then what happened about two days after that was Um, when, every day Parliament sits, there's an hour of question time where anybody can ask the Ministers anything, and, and, and when you're a crossbencher, there's a roster, we just go around in a cycle about when we get to ask the, uh, someone, one of the Ministers a question.

So I sort of looked at the roster, I said, oh, I'm up the next day, and I thought, well, I'll ask them a question about Harvey Millay. And so I asked, uh, Daniel Mookie, the New South Wales Treasurer, I said, look, you know, are you aware that, uh, Pretty radical libertarian has just been elected, overwhelmingly in, uh, Argentina and, uh, do you think the government can learn anything from this experiment?

Are you going to be keeping a close eye on it? Now he got up and gave quite an entertaining answer. Then after question time, there's another half hour debate where people just, members can get up like myself and it's called the take note debate and you can get up and give a three minute speech about what the minister said.

So I got up and I, and look, Daniel Mooker, who's not a bad bloke as far as labor treasurers go. He, uh, he said, Oh, well, look, I think Argentina's problem is, uh, that they haven't had enough welfare and I got up and I said, well, look, I think that's wrong. Uh, I know what's wrong. I think welfare has been the problem in Argentina.

They had a very big, they haven't been like a communist government, but they have been democratic socialists. Yeah. And, um, so I got up and I. I said, look, I think you're wrong, Mr. Treasurer. I think welfare has been the problem, not, not, not the solution. And I, I finished that speech. And just as I was going out to the dispatch box, I, I thought of this little line.

It just popped into my head and I, I used it as my final line in my little three minute reply. And I said, don't cry for me, Argentina is out. Inspire me, Argentina is in. And then I put it up on social media. About 12 hours later. My Twitter is just getting flooded with all these new followers from Argentina, like about 2, 000 in a, in a, in a day.

And I thought, what's going on here? And then I, and then, uh, and then people said, John, your speech just made the six o'clock Buenos Aires news about, about don't cry for me Argentina, etc. And then I start getting these, uh, messages, um, through social media saying, John, I think the, uh, and this is people in Argentina who are very happy with what we're doing, because I've said a few things in Parliament about Harvey Malloy.

And, uh, they said, John, I think that the president might be inviting you to his inauguration. And I thought, well, that'd be terrific. I'd love to go. It'd be a great honor. Uh, but no invitation came through. And the invitation, the

inauguration was on a Sunday and then, uh, Thursday night at about six o'clock Sydney time, the invitation did arrive and I thought, well, it's too late to get there.

But then I realized, you know, if you're going to Latin America, you're going across the international dateline. So it's, we've actually got another day and I thought, okay, so we scrambled. I was on the plane with Ross the next day and we got there and, you know, we had a week in Argentina. Now we, they invited about 300 international guests.

But 90 percent of them were from other Latin American countries. And Ross and I were the only Aussies there, although the, the ambassador was there. Typical DFAT person, nice guy, but not a true believer. And, um, and, um, so, so look, look, we walked, look, people have asked me what's Argentina like, and I'll tell you what it's like.

I grew up in the 80s, I was a teenager in the 1980s, and I, I remember hearing, because I was interested in politics even at that age, I remember hearing that Australia and Argentina had the world's highest living standards. you know, up until the 1940s. And Australia still does, you know. Despite very bad governance, gentlemen, Australia is still a great place, okay?

Because we've got a small population. We've got a whole continent to ourselves, okay? Uh, but Argentina, Argentina, you walk around the place, you know, look, I only went to Buenos Aires, but, uh, you know, that's the, that's the capital and everything. You walk around and you can tell the place was, once was very, very wealthy, okay?

Because, you know, in Martin Place in Sydney, there's very beautiful colonial architecture from the 19th century. You know, the big, impressive, uh, you know, uh, sandstone buildings are everywhere. But in Argentina, the architecture is twice as big, twice as grand, twice as colonial. And it, and it's like in about 10 times as much space and all the, all the streets are big, beautiful boulevards and there's parks and gardens and statues and fountains.

So you can tell the place was once absolutely booming. It used to be for a while, the most popular place for European migrants to go to, even more popular than the United States. In sort of the 1890s because Argentina had this policy for a very long time where we're going to have a very small government and we're going to let the people naturally flourish, spontaneously flourish.

And it worked. It worked beautifully. Now, then in the 1940s, they elected Juan Perón as their president and he was a democratic socialist. And ever since then, they've had. Look, they've had a few military dictatorships along the way, okay, not that many, but they have. But generally speaking, the people have voted for democratic socialists.

And so I say to Aussies, um, we remember that we had three years of Gough Whitlam in this country in the early 1970s, and it was personally, not that I've met Gough Whitlam, but I mean, he is an impressive human being, Gough Whitlam. Okay, he's highly intelligent, he's got a, he's a big guy, he's got a lot of presence about him, and I think he was basically a good person.

But he was just badly misguided. He really believed in democratic socialism. He thought, we need to make Canberra really powerful, and Canberra can sort of boss the people around, and it'll all work out well. So we had three years of that experiment, and it was a disaster. Anyone who's sort of, you know, over the age of 60 can verify that, because we had an election, after the Queen dismissed him, we had an election, and about 56 percent of the country said, no, no, no, Gough, we don't want you.

And, but that was only three years and we bounced back from that, you know, fairly, fairly quickly. But poor old Argentina has basically had goth Whitlam style government for 60 years. That that's the bottom line, probably 80, 80 years. And the place, while it was once very wealthy, the people are walking around and they've sort of, you know, what, what happens when the government's bossing you around is people lose energy, they lose entrepreneurial drive, they lose initiative.

And, uh, so now, now it's just a mess. You know, I walked in there with a, I walked into the money exchange place there with a, a hundred dollar us bill. I came out, seriously, there must've been like, you know, there was just a ton of pesos. One very good thing about Argentina is, uh, doesn't cost much to live. I barely spend any money.

You know, it's like, it's, you can go out for a beautiful meal at a very flash restaurant. It's like 20 Australian bucks. Um, and so now what's happened is. The Democratic socialism has finally come to an end, and I, and Harvey Malay is elected now. Who's Harvey Malay? Well, firstly, he's not a politician. He was a very good economist.

He's written about 50 academic papers. He was an academic and he's, and, and he's radical libertarian, you know, he is really, he actually, he, he opened openly, says that, he says, ideally there would be no government. He's actually an an Arco capitalist. So that's as radical as you can get. He really believes in the markets and free enterprise and a very, very small government.

And now, now, so he's, he's not only a brilliant academic and he's not a politician, he doesn't talk like a politician. He just talks so it says how it is, but he's also, which is a huge asset in politics. He's highly charismatic, you know, he, he, he, he's, he's just got presence about it and he, and he's, he's an ideologue.

He's not going to muck around. And so, young people voted for him in a big way. Now, I bet a lot of those young people voted for him, not because of his policies, but because they thought he was cool. So, but, and he's got this huge majority. Now, I've got to say, Cody and John, he's got a hell of a job ahead of him.

Okay? Oh yeah. You know, and, and it's going to take, I, I think things are going to get worse in Argentina for two years. That's my prediction and Harvey Mullay has said, look, it's not going to, it's not going to become a utopia overnight. He said it's going to get, you know, it's like when someone's sick, you got to give them some medicine.

The medicine tastes bad at first. Okay, but it fixes them up long term. He's got to get the socialism out of the system and he's doing it. He's absolutely not mucking around. And I think that things are probably going to get worse for a period of time because you've got to clean out the mess. But then if they, if the people can stick with him in two years time, I think Argentina will then really start to rebound with strength.

They've got a ton of natural wealth there. You know, you know, the, the biggest, uh, copper, copper is an important mineral. The biggest copper producing country in the world is Chile. And they dig it out of the Andes Mountains. Well, Argentina has 50 percent of the Andes Mountains, and they don't have one copper mine.

And they've got a ton of copper there. Their governments have just said they have, they've been anti mining. I don't know why, but they've been anti mining. And so they, they, there's so much potential there. If anybody can turn Argentina around, it is Javier Millet. We wish him all the best. Um, and so that's my, uh, postcard from, uh, Buenos Aires, gentlemen.

Well, I've got a massive, uh, lithium content over there as well, which they're going to exploit, exploit. Oh, excuse me. Here you go, John.

The lithium. This is the first, John. He's lost his tickets. Um, and Buenos Aires, it was always considered the Paris of the South. Oh, look, look. Absolutely. I mean, the word, the word in Spanish means beautiful air. It's a very big city, but it, you know, it's got very clean air. A lot of these third world countries have got, you know, a lot of pollution.

Now, Buenos, Buenos Aires is a beautiful place. People are very friendly. One thing that sort of surprised me, I've been to a few sort of developing countries and you know, on the street, a lot of people up in Vietnam and India and, you know, other places. And a lot of people on the street can speak pretty good English.

And you'd think, I mean, Argentina is a very European country. It's actually about 50 percent Italian, but they speak Spanish and the foundation is settled by the Spanish and everything. But, um, it is a ton of Italians went there in the late 19th century. But the thing is that very few people I found spoke English.

Now, why was that? That was because in 1992, we had the Falklands War where Margaret Thatcher, you know, uh, defeated them over the little silly little islands in the South Pacific. And after that, Argentina said, Oh, well, we, we don't want anything to do with the West. We're going to plug in with all the baddies around the world, you know, Cuba, Nicaragua, North Korea, China, Russia.

And so they basically haven't been teaching their kids in school, English. Uh, Harvey Mille is, is going to, to change that because it is important. You know, if you want, if you are in a desperate situation, if you want to turn it around, it's helpful. Even Harvey Mille, I saw him speak at Davos the other night.

He is a super smart guy, academic and everything. I don't think he can speak English well because I have never heard him even attempt to speak in English. He, uh, that, that speech in Davos and the world economic forum is a cracker. He would swab and that crew squirming in their boots with what he said. It was just brilliant.

Look, I'll try and get a link up on, on there, uh, on our interview tonight. So people can watch it. It is well worth the 25 minutes. Believe me. Um, Yeah, I was, I was waiting for him to tell Klaus Schwab where to go at the end of it, but um, he didn't, although there is a video floating around of someone telling Klaus Schwab where to go at the World Economic Forum, but I don't know whether it's real or whether it's been fake, but the sentiment is shared by people around the world, I'm sure.

So I watched that speech, I was lying in bed the other night and it was about two o'clock in the morning and I just happened to wake up and I saw a message, someone sent me a little SMS. John Harvey Mollet is about to speak at Davos. I thought, I better get out of bed for that. And I watched it live. Now, now, he's, what he's doing is, why did he go to Davos in the first place?

And I can understand a lot of your viewers would say, well, what the hell is this guy doing in Davos? Well, he's in a desperate situation and he desperately wants to turn the country around. Now he wants to be. Uh, he wants to be friendly with the West, which they haven't been friendly with before. Now, we, the three of us, are often critical of Western governments, but if you've got a choice between plugged in with China, Nicaragua, Cuba, you know, Russia and everything, or plugged in with the West, well, you're going to choose the West.

That's, they're going to be able to help with foreign investment and things like that. So he's being, uh, friendly, and he didn't attack Charles, uh, Klaus Schwab, and he didn't attack the WEF, but he did give a magnificent speech, as you said, Hootie. Uh, about the, uh, the, uh, the dangers of socialism and the, and the opportunities that free market capitalism provides.

Yeah, no, it's awesome. I thoroughly enjoyed it. I was riveted to it for the whole, uh, whole speech, but, um, yeah, so we, we look forward to that now we're seeing good government happening in other parts of the world, Italy is, um, really cracking on with some amazing reform over there. What do you know about that?

Anything at all? Look, I don't know it well, that well, but I mean, Georgia Maloney, I, I, I think she's probably, you know, I, I admire her very, very much. Um, and you know, I, I hear she's very popular. We never hear about that. I mean, I remember when she got elected about, you know, sort of 15 months ago, we were told, oh, this is the return of.

Mussolini. Okay. That's what we were told. Uh, but, you know, she's extremely popular. She's doing a very good job. They've got this dreadful problem with boat people coming in. Now, I've been critical of Tony Abbott in many respects. But look, you've got to give Tony Abbott credit. You know, he militarized our border and he stopped the people smuggling.

I really, you know, I don't know why these European governments, Britain or, you know, the Southern European countries, I don't know why they don't employ Tony Abbott to come over and show us how it's done. You've got to, they've got to stop these boats. And I think Georgie Maloney is doing what she can on that front.

Well, John, we can ask Tony Abbott next week, I think, can't we? We're having him on. Hopefully. Yeah. He's agreed to come on. So, uh, Very good. Ask me about that. Well, I mean, look, I, I reckon Tony would probably want to take the job, but they should be. You know, they've had a conservative government, so called conservative government in Britain since 2010.

Now that's a long government, right? It's coming up to 14 years. And the place, you know, it's almost like you've got a Greens government, okay? And then they, and they're getting, you know, all these people, all these, you know, uninvited people coming over here through the British Channel. You know, the British Navy is pretty powerful.

Well, they could turn these boats around, but they just They lack the will. They lack the guts. Tony Abbott, you know, I remember when we had the boat people in this country. You know, and like, you know, people think that, oh, we're hard hearted because we didn't want them to come. A ton of, hundreds of people, if not thousands of people, drowned on the way here.

It must have been a miserable death. You're on a happy little boat, you know, from out back Indonesia, trying to get to northwest, you know, the Kimberleys. And, you know, you, you, you've got a boat full of, you know, 50 people and the boat, boat starts drowning. Okay? You know, boat starts sinking, you know. Now, a lot of this didn't turn, we never saw this on TV.

We never got, got it on video. But there would have been 50 people there. It would have been a desperate situation. Some people would have been alive after a day or two. And it just would have been completely horrible. So what Tony Abbott did was, was a very compassionate thing to do to stop it. And, um, you know, uh, and he did it.

And then the miracle is. And the Rudd and Gillard and Rudd, you know, they just kept coming, kept coming, kept coming. And it's like, oh, we don't know what to do. We don't want to do it. Tony Abbott and Jim Mullen probably deserves most of the credit, the great Jim Mullen. They stopped it in two weeks. You know, where there's a will, there's a way.

Where there's a will, there's a lawyer. Yeah, that's right. Yeah, that's right. Tony. Definitely is. Smart cities, mate. What can you tell us about that? Okay. Well, it sounds like a totally wacky conspiracy theory. That they, that, you know, that these smart cities are coming in, but it's happening right in front of our eyes.

Uh, we have got a surveillance state being erected all across New South Wales, probably all across Australia. Okay, but my focus is New South Wales, of course, but I challenge people to type into Google or, you know, whatever their favorite search engine is, the name of their local council, so whether it's the North Sydney Council or the Tumut Council or Dubbo Council, type in the name, you know, Dubbo City Council Smart Cities.

And 90 percent of them have got this page where they're saying, Oh, we're bringing in all this monitoring technology. They're telling us that they're doing it. Now they're doing it through the local councils. They're not doing it through the federal parliament or the state parliaments because there's a lot of media scrutiny about it.

They're doing it through the back door, through the local councils. Now they're putting up all these very ugly cameras, very powerful cameras, which it's not the CCTV thing where we've got CCTV thing on the street corners. You know, so if there's a mugging or something bad happens, we can go back and rewind it.

There's not like people monitoring it all the time. I'm still skeptical of the CCTV. I think they probably have reduced crime, but they could also be flicked, flicked into a surveillance state. But putting that aside, these new cameras is openly about a surveillance state. They want to measure your movements.

It's going to be tracking, they're putting it all around roads. They want to see where the number plates are going. Now what, it's all about global boiling, the non-existent global boiling fairytale. So what they want to, oh yeah, just on the global boiling fairytale, you remember we had a few hot days in, uh, Europe had a few hot days in July this year, uh, last year, okay, and that's when the silly UN Secretary General got up and said, oh well the era of global warming is over, we're now in the era of global boiling because I've had a few hot days.

And, you know, these things happen. It's just nature's, you know, a lot of, a lot of, it's random, it's a variable and, uh, and so anyway, so I now call it global boiling. I don't call it climate change. That's, that's, they said UN Secretary General, so it's global boiling. Now, um, and they're obsessed with it. The one thing, the one thing that has surprised me the most about being in Parliament for almost a year is that everything, everything from the major parties, Liberal, Labor, National, Greens, of course, they see every piece of legislation, it goes through the lens of climate change, climate change, climate, it's this religion, it's this religion, right?

So they're obsessed with climate change, and I knew they were obsessed with climate change before I got there, but they're three times more obsessed with it than I thought it was, than I thought they were, okay? Now, what this Smart Cities thing is about, it's about monitoring your movement so you don't travel that much, you don't have a high carbon footprint garbage, okay?

Now, at first, I think what they're going to say is, once I've set it all up, Well, hopefully we can resist it, but once they set it all up, they'll say, Oh, well, you will get rewarded for not having a high carbon footprint. But then before long, the carrot will be out, the stick will be in. You'll get punished for having a high carbon footprint.

So what are we going to do about it? Well, most people don't know about it. If you start talking to people about smart cities, they'll think you're a, a cooker. Okay. Now, uh, and I'm proudly a cooker, by the way. Uh, but, uh, but the, the smart cities, what they're doing is they, uh, they are erecting this surveillance state and they're going, it's, it's about sort of getting us all to reduce our carbon footprint.

They want to treat us like farm animals. Now, I think they want to do this all around the world, but I believe that particularly that their, their experiment, their practice run is good old Australia. And why is that? Because we were infamous around the world during the stupid COVID period. About how compliant most of us were, you know, gone is the sort of the larrikin, you know, the, the Paul Hogan larrikin.

No, no, no. We just went along with it. Well, well, 15 percent of us didn't, all your good people listening. Uh, you know, you, you didn't go along with it and it took courage as you would remember. It took courage to take a stand. I remember I first met John Lada and he got up and gave a very fiery speech in Martin Place.

You know, all these, there was costs, there was costs, there was costs for all these things, you know, for all of us. And, um, so, but this is, but COVID was the entree. The main meal is global boiling. This is what they're obsessed about. It's all nonsense. It's all an excuse to have a big, all powerful, George Orwell state.

It's like they've read 1984, and rather than being horrified by it, they've been inspired by 1984. So, the Libertarian Party, we've never paid much attention in the past to local council. Uh, and I know you're a, a, a councillor, John. But. In the, uh, we've got elections in September across New South Wales, this year, not that long away.

And the Libertarian Party, I'm going to be announcing it in Parliament next week. Uh, uh, in about three weeks. When Parliament's first week back, I hope. We're going to be running a big, bold, Libertarian campaign across the state. We're hoping to run in every council, in every ward. Uh, and we're going to have this, uh, we're going to say, look, if you want to stop the surveillance state, we're the only party taking a stand on it.

Now we're going to, we're going to say, get woke BS out of council. You can go to any council you want around the state. You walk into their foyer and there's a million rainbow stuff, Aboriginal stuff, sorry stuff. Global boiling, of course, just doesn't end, it just does not end, and it's coming through the local council.

Local councils have got an important role to play. Roads, rubbish, and practical things, little things, little things that actually affect the community. But now they've all become highly politicised. Even, you can go to seats where it's like a safe National Party seat, or a safe Liberal Party seat. That's still got all the woke stuff everywhere, right?

And, uh, you know, so, so, but a major part of it, oh, we're going to be against the, we're going to be, we, we, we're going to be campaigning in favour of councils being able to demerge if they don't want to have a big mega council with a big bureaucracy. They want to have a council closer to the people. We're going to be campaigning in favour of that.

And we're going to be in favour of development. We're going to be in favour, you know, if you own your property and you want to sort of build a granny flat in the backyard, we're going to say, do it. We're going to vote pretty much in favour of every development application. So we are gearing up big time gentlemen, uh, for a vigorous, uh, bold libertarian campaign in the New South Wales elections later this year.

Well, that's, that's news, that's music to our ears because local government, we've been saying for a long while, John, uh, that's where the stuff's happening and, uh, if there's a grassroots movement of truth and resistance in this country, and there is, then it has to start at local government. We have to build from the grassroots up.

Um, you know, people, the truth and resistance movement can't expect to go in and rule Canberra straight up. We've got to come up through the ranks and I think that's, that's really important because that's where all the rubbish is going to be implemented. All the stuff that affects us most is going to be implemented.

Things like electric cars and, you know, look, I just saw a report, um, it was, I think it was on Channel 7 News. Uh, a company that does road testing for vehicles and writes articles about it. They took two BMWs to Melbourne from Sydney. One was petrol and the other one was electric. Both the same car, they're just different model.

Uh, one was electric, one being petrol. Uh, the electric car took two hours longer to get there because it had to stop for 45 minutes to an hour to, to recharge. It also had trouble recharging because a lot of the charge stations weren't working, and when the Optus outage was on, there was no ability to do it.

It costs \$40 more for the electric car than the petrol car. In electricity to get down there. And it's just mind boggling. It's something like 36 hours to charge your electric car from home through your PowerPoint. And, and if you do use one of these public ones, it's about 45 minutes or an hour, and it costs you about 45 bucks to charge your battery.

So. You know, the end of the report was we've got a lot of things to do. Now, what's ridiculous in Queensland is, um, their, uh, their, their energy minister up there has said, we're going to allocate half a billion dollars to put charging stations in every 150 kilometers around Queensland. Now, the irony of that is they're using coal royalties to pay for it.

So how are they going to fund it when they shut down coal? You know, I mean, there's just no common sense in any of this, John Ruddock. Um, Well, look, you know, we're, you know, new industries come along. In the 1920s, we had the radio industry and the cinemas, okay. And then refrigerators, you know, household appliances.

Then we've had, you know, cars come along and, you know, mobile phones in the 1990s was a big deal. And, you know, uh, all these things are great. And guess what? They're all funded by the private sector because consumers want them and producers produce them. The government didn't have any, didn't have any say in making the TV industry a big industry or all these other things, the car industry originally.

Now, why does the government have to be so involved with this electric vehicle industry? If, if they were fantastic, if they could look after themselves, if they could pay for themselves and people would make a profit. We wouldn't need the government to be involved. No, but the government has to meddle in all this stuff and

give you all these subsidies and reward you for having an electric car because it's not economical without the government's support.

But they're all still obsessed with it because they want to stop global boiling. Now, gentlemen, you know what? If the world really was going to come to an end in 10 years, and we've been told repeatedly, it's good, we've got a 10 year deadline, okay, even King Charles has said it a few times, Al Gore, Greta Thunberg, she said five years.

If it was true, I love the world, we all love the world, you'd be an idiot if you don't love, you know, I don't want the world to go to hell, but guess what, they've made it all up. Now what I was saying before about those few hot days they had in Europe early this year, last year, we were told about a hundred times by the Bureau of Meteorology, Australia's going to have a very, very hot summer.

It's going to break records. It's going to be hot and dry and bushfires. I'll tell you what, look, it's been very disappointing, okay, if you want to get a bit of sun. It's been cold, I've had a jumper on for half of this summer. It's been cold, it's been wet, you know, it's unusual to see a hot sunny day. So they can't get the next few months right.

But they are definitely, they can forecast the next 100 years. Now, what we know about climate forecasts is, we're still guessing. I'm in favor of continuing to understand it. I think probably, give it, give us another 50 years, maybe 500 years, we will actually be able to, we'll have the science perfected. We will be able to sort of say, okay, well, we think this is going to happen, but at this stage, we're guessing, we've got no idea, and all we can say is, well, the weather, the climate, whatever you want to call it, is very variable, okay, and if anything, if it had to get two degrees hotter, or two degrees colder, the world would be a much better place if it's two degrees hotter.

Okay, now, uh, you know, I like it as it is at the moment, but cold is what stunts life. Cold kills life and that this, when it, when it's warm, life flourishes. So, uh, so we, we, we should actually be prepared. What, what is the civilizational threat? Since, since I think it's established that we don't know what's going to happen to the climate, there's a million factors that influence it and the temperature of the atmosphere.

We should actually prepare, be preparing for the worst case scenario, which is it gets seriously colder. We had the little ice age, you know, three, 400 years ago. You know, the Thames River in London was frozen for half the year. You know, this went on for about two and a half centuries. That's when life is, you know, really challenged.

Okay, and that's what we should be preparing for. Not this global boiling fairy tale. There's a lot of fairy tales around about all that stuff. I mean, there's, uh, you know, people are saying, uh, you know, the, the global warming cult is saying that, um, you know, the weather up in Cairns, for example, in, in the far north, uh, two cyclones in a year, for goodness sake, we've never had that.

I used to live up there. I lived up there for years. I flew in the tropics. I've landed in the eye of a cyclone up at Lockhart river in an old DC3. And I can tell you that we used to prepare, we, we, our aircraft fleet up there, Bush Pilot Airways, we used to be ready to fly our aircraft to Mount Isa to get them out of the, out of the cyclones.

And we, we'd often do that two or three times a year, at least. And so we haven't had many cyclones lately, and now we're getting them back again. Uh, we're getting weather where we live in Northern New South Wales at the moment. Michelle commented, this is just like when we first bought this place 10 years ago, we had nine years of drought.

And we were, we were begging for a thunderstorm to dump some rain. Then we had the floods that took out Lismore and Corakay. And now we're getting weather that we used to have when we first moved here, which was, you know, hot days, steamy days, thunderstorms in the evening. Um, it's been lovely. So, I mean, um, There's so much you can say about that.

And, um, the, the, the thing I noticed when I was touring, and I want your perspective on this, when we were touring around Victoria, for example, we were, we were sickened by the number of, of wind turbines. I mean, for goodness sake, they are everywhere. And Chris Bowen is now telling the people along the coast near Portland that they're going to put wind, wind turbines out off that beautiful wilderness coast there in the water.

I mean, it's just bizarre. I mean, that coastline is sensational. I mean, we're talking about, you know, from the 12 apostles towards the South Australian border. Um, what, what's, uh, what's your position on, on that kind of renewable energy? Well, they're unreliable and they should be called the unreliaables, not the renewables.

And, uh, what we had in this country, you know, I can remember when I was about 10 years old thinking, gee, it really is amazing. This little, this little hole in the wall where I can insert a electrical device. And it powers it up, and it's so cheap. You know, I used to look at my mum and dad's electricity bill, and I'd think, look at all the good electricity does, and, you know, all that goodness for just this little bill.

And we had, we had some of the lowest energy, uh, costs in the world, because we've got a ton of coal. Coal's, coal's the best way to produce energy. If we want to go nuclear, you know, a lot of people do, uh, we've got a ton of uranium. We've got, you know, we can and, you know, the foundation of any economy and the economy gives us a successful civilization.

The foundation is the energy source. We need cheap, reliable energy. They've got a thousand years of proven coal reserves in New South Wales, and they haven't even looked for it. There's just so much coal, all the way up to Queensland, down to Victoria. Western Australia's got a fair bit too. Uh, and so, but so we had this magnificent, when we, you know, up until the last 15 years, we didn't even talk about the electricity prices.

We didn't even talk about the energy system. But no, no, these masterminds, these geniuses, our political geniuses and the crony capitalists, the crony capitalists are making a ton of money out of all this garbage. They've decided to rip down our magnificent, cheap, simple electricity system and rebuild it.

And there's, there's trillions of dollars sloshing around and it's all for nothing. It's all for nothing, you know, and it's a, it's a dreadful thing. It's, uh, this, this, this religious thing, which is what it is, it's got to collapse at some point. But the problem with it is, is, uh, you know, the politicians love it.

Because it makes, I don't think the politicians are making money out of global boiling. Uh, they're making, um, it makes them feel like Winston Churchill. You know, they're saving the world from this great threat. It makes them feel like the superhero. Then you've got all the, uh, then you've got the media.

The media love global boiling because they love hysteria, as we saw during COVID. Now people, when there's a hysteria on, you've got to watch the news, okay? And they love, they love it. So, so the, the politicians love it. The media loves it. And the crony capitalists love it. You know, the people that are just getting money off the government.

Okay. Non stop, lots of money, lots of money. All these carbon credit scams. It's unbelievable. These carbon credit scams. And so we've got these powerful forces all come together saying, Oh, you know, global boiling, global boiling. And, and, and so they want to go and, um, build these wind turbines. You know, these things that break down, it's all making China rich, of course.

Now I haven't looked into it. But I am, uh, very much open to this idea that when we all love whales, one thing the Greenies were right in the 1970s, they had a big campaign, save the whales. Okay, well, who could disagree with that now? Okay, that's when the Greenies actually cared about the ecology and the environment.

Now they're basically communists. They want to bring about a big Marxist government. Now, There are a lot of whales that go from Antarctica up to the sort of, you know, equator every year, the migrations, and they're majestic animals, they're highly intelligent, they love their, their family and everything, they're close, you know, they're sophisticated beings, and, and, you know.

Now people tell me that these stupid wind turbines out in the middle of the ocean you know, off the coast stuff up their sonar communications and they dunno where they're going and they frazzle 'em, you know, they sort of end up lost in, you know, and, and, and I reckon, well, you know, we should at least be looking into it.

I know some smart people, Michael Shellenberger. He says, look, these things are hurting the, hurting the Ma Majestic whales. Well, knowing, knowing that when you have massive government intervention, there's always unforeseen consequences. And I have a feeling that they are stuffing up the marine life, but they wouldn't care about that.

Because they actually don't care about the environment. It's just all about this, let's build a big, big, big government to boss everybody around. And what better excuse than that? Saying, oh, well, if we don't do it, we're wrecking the planet. But back in primitive times. Back when the witch doctors were running the world, you know, before we started writing and having civilisation, the witch doctors used to say to people, Oh, well, look, you know, I'm not going to go out and hunt for animals today or pick berries.

My job is to talk to the gods. And you've got to give me free food. And I've got a fancy, fancy hat on, a fancy beads on. And I'll talk, talk to the gods. And if you don't give me enough food, Uh, there'll be a drought. Okay, and then if there was a drought, they'd say, Oh, you haven't given me enough. You haven't given me enough.

You've got to give me more food. You've got to obey me more. And they thought they could control the weather. All primitive societies, with their primitive religions, they thought that they could control the weather. Christianity doesn't say that. You can read the whole Bible. It's too, it's too elevated. It never says, you know, God's going to change.

Jesus in fact says at one point, he says, look, God makes it rain for the good, for the good guys and the bad guys. You know, he says these things that he basically says we can't control the weather because Jesus was pretty smart, whatever you think of him. And, and so the, these, which, and this is what we've got now, which doctors are running the global boiling agenda.

People like alcohol, they're all making hundreds of millions of dollars. And that's a, that's, Gore said it in Davos 12 hours ago, he said, if we don't do this, you know, or he said as soon as we bring about all the EVs and the windmills and everything else and the solar panels, as soon as we have that, the temperature will drop.

I mean, you've got to be a complete idiot to go along with this. And I'll tell you what, there's only two people in the world today, two categories of people that believe in this global boiling thing. Firstly, there's the people making money out of it or getting political fame out of it or whatever. But there's a big chunk of people, I reckon 50 percent of people out there at least, are fairly sceptical to some extent about global boiling.

But there's a lot of people out there who said, Oh, yeah, the ABC says it's true, the Sydney Morning Herald says it's true, I believe in it. Now I'm thinking to myself, look, we've been hearing this for 15 years. If you really think that the world is coming to an end because of this, Well, you should have really looked into it by now, after 15 years, you haven't looked into the world coming to an end, because that's what they're claiming is going to happen.

And they, they, they, if anybody who has looked into it with an open mind, 100 percent of them say, Oh yeah, yeah, yeah. It's BS. Okay. So these people, there's a lot of people out there, the sheep, like the COVID sheep, they say, um, they, they tell you, I believe in it because they haven't looked into it. And I'm thinking, well, you're not a very good person.

If you haven't looked into it, you should have looked into it. You know, we, we meant to all love the world. We don't want the world to go to, you know, become a boiling, a boiling apocalypse, but they haven't looked into it because they don't care about it that much, but they still say, Oh yeah, I'll vote for the Teal.

I'll vote for the Greens. I believe in global boiling. We'll just have to keep fighting, gentlemen. We'll have to keep fighting and hopefully we'll tip them out. I'm, I'm very pro President Trump. I hope he can make a comeback. The reason why the leftists hate his guts so much has been they hated John Howard, they hated George W.

Bush, they hated Tony Abbott, they hated Boris Johnson, but the Trump hatred is ten times higher than any of that. Why is that? I believe the biggest reason they hate his guts is because Trump's the only world leader, only significant world leader, who came out and said, I don't believe in global warming.

Okay, now John Howard and Tony Abbott, they don't believe in it either and they never have. But they went along with it because they, on this occasion, they were weak. Tony Abbott's given very good speeches since he left the prime ministership, saying it's nonsense. Good. Thank you, Tony. But as prime minister, he brought in a lot of, um, a lot of, he got rid of the carbon tax, but then he brought in worse stuff.

All this, you know, regulation stuff, which we're still living with. So, this is why they hate Trump's guts, because he, he attacks their golden calf more than any other world leader. Now, there's other reasons they hate him, but I believe that's top of the list. Johnny? Well, on to matters medical, John, um, there was an article this morning in the Sydney Morning Herald about the rise in, uh, cancers in the tongue of all places, I think it was, uh, in the under 45s, um, they don't know why.

Uh, we spoke with, uh, Professor Angus Dalglish. Uh, professor at the St. George's Hospital in London, uh, only a couple of weeks ago. And, uh, he quite openly said on our program that he believes that the mRNA vaccines are causing, uh, significant, uh, uh, rises in, uh, cancers, uh, throughout the world. And he, he believes that, uh, they should, uh, stop the mRNA vaccine immediately.

Uh, he's quite outspoken on it. He says that, uh, he's seeing these turbo cancers, he's had friends die. When you look at what's going on here, we've got, uh, only last week in Tumbarumba, uh, they booked an ambulance to take a patient from Tumbarumba Hospital to Wagga. They couldn't get an ambulance for hours, so the patient's family ended up driving them from Tumbarumba Hospital to Wagga Base Hospital.

They got over there, they sat in a waiting room for 22 hours in a seat, because there was no bed available in the Wagga Base Hospital. 22 hours. This is Health Care 2024. I'm still waiting on an IRC decision. That was last heard in May of 2023. The Commissioner reserved his decision. Here we are in January, 8 months later, still no decision about whether we can go back to work.

Uh, it just, it's just mad. You've got Kerry Chant, uh, now ramping it all up again, saying we've got to have masks. I don't know how many experts we've had on club grubbery over the three years saying that masks are absolutely useless. Uh, but this idiot keeps fearing the public into thinking that they're going to die.

If they don't wear a mask down at the supermarket. Where can we, where can we go, John? It just seems to be, uh, the never ending story. Well, John Larder, you know, you have been a victim of state malicious persecution, which is disgusting, which is fascist, because you took a stand on it. Now, with these turbo cancers,

surprisingly, you know, I seem to have seen an uptick in people I know in my personal circle who have had cancer. I heard about someone who I don't know that well, but I've known him for about 10 years. I spoke to his partner today. She said he's passed away. I said, what happened? She said he got cancer and three weeks later, he was dead.

He was about 40 years old. Now, uh, what it is, well, what it could be. Okay. Look, what, what, what we, if the corporate media was actually curious about this subject, we could have, we, we, we could hopefully find out some more. Okay. But the weird thing is, is. Nobody who, who I know didn't, who, who was unvaxxed is getting this stuff.

It does seem to be a correlation with the more stupid vaccines you have. Now, um, and how many people, how many people get a bad flu in the middle of summer? Look it happens occasionally. Bloody hell. Half the people I

know, all the vaxxed people of course, not the un vaxxed, spoke to someone today. Oh John, I'm in bed, I'm in bed, I'm in bed.

We can't move. We've got the worst, worst flu ever in the middle of January. This didn't happen when I was growing up, right? But the, but those stupid, demonised, nutter cooks, the people who didn't take the COVID vax, I, a. k. a. the best people in Australia, are not getting it, okay? Now, so is it because of the mRNA vaccine?

Well, look, what would I know? I studied history. But I would say this, the COVID vaccine, The mRNA, which was Pfizer and Moderna was not your everyday flu vaccine. Now, I, I, I wa I remember about 10 years ago, I was walking past a chemist in North Sydney, and they had this sign out the front saying, flu shot available here.

I thought, oh gee, that I never heard about a flu shot that might've been 12 years ago. And I, I looked at it for a second. I thought, oh, flu shot. No. I thought, no, I don't. I'm, I'm not gonna take that. I said, I'll, I'll, I'll just get the flu, because I thought, man, what the hell's in that, you know, it's gonna, the flu's been around since we were a caveman.

And I just, I just immediately said, no, no, no, no, I'm not going to get a flu shot. A lot of people I know would take the flu shot. I didn't argue with them. I didn't complain. I said, no, no, it's just my personal choice. I'm just not going to take it. And in fact, people I knew who did take the flu shot, I'd actually, I'd say, what's it like?

I'd say, yeah. And a lot of the time they'd say, oh, I didn't get the flu. I'd say, okay, well, that's good. Well, I'm still not going to take it. You know, I just, I just thought it could be, it could be preventing you getting the flu, but it could be also doing something else that we don't know about. Anyway, that's the flu shot.

That's the flu shot. They came out with this COVID situation, and they said, Oh, it's a whole new type of vaccine. It's not the flu shot, it's this whole new thing that's never been done before. mRNA, I don't know what the hell that means, but they told us it's brand new. It's brand new. I'm like, okay. So it's rushed.

You know, normally these vaccines take, you know, five to ten years to get to market. This one's rushed. It was born of hysteria, born of craziness. And it's a brand new vaccine. I thought, bloody hell. Yeah, I mean, I remember when it first came out, I thought, look, it'll probably work. Probably not gonna poison people, but I thought, I, I remember thinking at the top, I said, there's a 5% chance this is gonna be a monumental worldwide stuff up, because that the, and I don't, I, I, I know there's some people on Twitter, they say, oh, they're deliberately trying to poison you.

Look, I don't think that's the case. Okay. I mean, I, I think they're bad people. I don't think that're completely evil. I could be wrong, could be wrong. I know a lot of people disagree with that, but I thi I actually think that they thought that they were gonna help people with covid. That's what I think they were trying to do.

But of course, you know, when you're, when you're in a hysteria and you're rushing to something, you know, and there's a lot, ton of money, of course, you know, tons and tons of money for these pharmaceutical executives, et cetera, et cetera. And the media and the politicians are all into it, of course, you know, and I just thought, look, I'm not going to take this thing.

And I remember when it was really crazy, you know, sort of late 2021, you know, when it's just channel nine news, take your vaxs, you know, nonstop, nonstop. And I'm sitting here and I said, okay, look, whatever, if they lock me in my house for five years because I haven't taken the vax, I'll wait them out. I'll sit here for five years.

I'm not going to take the bloody thing. And yeah, I was lucky because my wife agreed with me on this subject. She often doesn't agree with me on other subjects. But on this one, we were united. Now, I feel very, very sorry for people who had the same position as us three and their spouse didn't. You know, and marriages broke up over it, you know, we all know people and it's terrible what the government forced us to do.

Now, if I wanted to come out with this stupid Vax, I should have said it's voluntary. It's a really good Vax. If you don't take it, you might die of COVID, but it's voluntary and we're not, and it's private. We're not going to ask you if you take it, but no, no, no, no. It was, it was just like, you know. When they were burning the witches, you know, this mass hysteria, mass hysteria, that's what it was all.

So are the COVID, are the mRNA vaxxers, um, causing these turbo cancers? Well, firstly, don't rely on John Ruddock. I studied history at university. I wouldn't know, I wouldn't, I wouldn't even know what mRNA means. But look, I reckon there's a decent chance. That's my gut reaction. There's a decent chance. And I know that you guys interview people who very well qualified in this field.

And they've got some alarming reports. And I think, look, even if it's a 5 percent chance that it's causing these turbo cancers, we should be having a massive public emergency saying, stop right now taking one more. I reckon it's more than a 50 percent chance they are, but who knows, even if it's a 5 percent chance it should be caught, even if it's a 1 percent chance it should be recalled immediately, because the last thing we can say about the stupid mRNA vaccines is, they didn't work.

That's the biggest thing. That didn't bloody work. Okay, because Fauci came out at the beginning and Gladys and all these other geniuses, Scomo, Joe Biden, one vaccine, you won't get COVID. Absolutely won't get it. Mr. Mr. Buller from Pfizer. One vaccine, you won't get it. Okay, two months later, well, you need two, you know, double the profits.

Now you have to, you know, if you're still listening to the government, I think you're up to about your seventh bloody vaccine or booster. Okay, so it didn't work. Okay, that's the bottom line. And so. That's the best case scenario. It didn't work. Worst case is, it's causing long term health issues. And I think there's a reasonable chance that's the case.

Certainly not, certainly not posting my, you know, that's not, that's just a hunch. Okay, I could be wrong. I think that there was, after the Vax rollout, there was a lot of high profile people died. And it would make the news a lot. People dying suddenly. Now look, the good news is that does seem to have dropped off, I think.

Okay, now we're dying of heart issues. A lot of young athletes were just dropping dead. I think the media reports have dropped off and that's a great thing. We don't want it to be poisoning people. Uh, but now we've got this, uh, this other thing about the turbo cancers. You know, all I can say is, you know, you'd be an idiot to keep taking these boosters.

And the good news is, barely anybody is. Because you know what? The cook has won. The cook has won in the end, because 90 percent of people aren't taking these boosters. They listen to us in the end. Now we had the government against us, we had the politicians against us, we had the state against us, we had the cops, the judiciary, uh, the corporates, the academics, the universities, everybody was against us, okay?

And little old us, the persecuted minority, we've won the debate. No one's taken us, barely anyone's taken the vaccines anymore and that's a good thing. Well, you know, Angus Dalglish, Professor of Oncology, it's in George's in London. Um, the way he described it is brilliant. He said he, he is 100 percent certain it's caused by mRNA injections.

And he said what it does to the immune system is it gets all the troops in your immune system to go to the Western Wall while you're being heavily attacked on the Eastern Wall. That's how he described what's going on in your body. It was fascinating. That's a great interview, John. It's well worth looking at.

This guy's top of his class, and he is really ripping it into the British government over all of this stuff. Now, I will watch that, yes. Another question I'm going to ask you, and I'm okay because this is, this is, uh, something that we may need to ask, given what you said about, uh, global boiling. Are any of your constituents, John Ruddick, contacting you about weather modification?

And their fears of it because we know from the people who are watching us and talking to us and what the trends are in social media is that weather modification is at the forefront of a lot of people's fears. Are you getting any, any people contacting you from your constituents to talk to you about that?

And have you looked at it at any, in any way? Uh, look, I received a couple of emails a week about it. Uh, look, I'll be honest, you know, you bring me on to the show, to be honest, I'm skeptical of it. I do believe that the global boy lists, they openly talk, the Club of Rome and et cetera, they openly talk about how.

If we can't stop the global boiling, they want to spray the atmosphere with aluminium or something to cool the world down. Now that would just be absolutely catastrophic. I can't believe it would get to that point. Now I have people contacting me saying that the government is already spraying stuff in the air.

Okay, I don't believe it's happening. Now I've got an open mind on it. I don't believe it's happening. I have had about six people, six friends this week, tell me I've got to watch. Putty and Larder's show, because I had someone on a couple of days ago. They say you've got to watch it. I do have an open mind on subjects.

I do change my mind. But the reason why I am sceptical, so at this point, and I haven't watched the show, and smart people have been telling me I've got to watch the show. But I don't believe it at this point because during covid, we did have whistleblowers within Pfizer and within the regulatory agencies, they'd lose their jobs.

We did have whistleblowers. They'd come forward and they'd say, look, this is a, b, C happened. Now they would get suppressed, but it would get out there on, on social media. Now, if there really is people waking up at five o'clock in the morning, they're going out to the Bankstown Airport, they're loading a ton of, you know, 44 gallon drums onto a plane, and they're flying around to spray poison in the air.

I'm pretty sure we'd have a few whistleblowers come forward and we haven't seen it. We have videos, at least, of this happening. Now, people point out to me, when I ask people sincerely, look, what's your evidence for this? They show me unusual cloud formations. I'm sorry, I mean, I don't believe it. I just, I just don't think it's actually, uh, I'm a libertarian.

I basically believe the state is a criminal agency. I don't think they're actually deliberately trying to poison us to death, okay? I'm pretty sure about that. I think that they're bad people. I think that the government, everything the government does eventually backfires. But look, that's, that's my frank assessment at this stage, I'm happy to be persuaded otherwise.

Yeah, not, not to do that either way, I mean, we've had a lot of people contacting us recently, asking us to explain condensation trails in the sky. Tell us how they work and why they're happening. There's a lot of people ask that. And to that end, we're organizing a program where we're just going to explain how condensation trails are, why there's a lot of them and why they're big and all that sort of stuff.

And we're going to, we're just going to lay it out in a slideshow and people can look at that. And then, because the part of all of these things that we're talking about is people need to be educated one way or the other. Having said all that, I've done, I've done a lot of work getting this presentation together, and I actually presented it to a group run by Charles Kavis, uh, the other day.

They, I was the guest speaker on, on this program. There are about 150, 200 Um, critical thinkers from all around the world on the program from the States and Europe and everywhere and Australia. And, and, uh, I was asked the question by a lady who, um, who has been researching this for a long time. While we've got you on talking about Matters Aviation, can you explain how condensation trials work?

And I just so happened to have the slideshow that I've been working on for this program ready to present. And I presented it to these people and so many of them went, Oh, That makes sense. Thank God for that. Now, having said that, I then went on to say, and I really believe this from the interview that we did with, um, with Dane

Wiginton, that people are recommending you watch, that weather modification programs and programs are well and truly in place.

I believe they've been planning it for a long time. I really do believe that. Now I don't know the method of delivery. Um, I, I, uh, I have my doubts around certain things, but governments need to start taking careful Not governments, but representatives of the people need to start looking at what's, what's causing their fear and actually digging into it because too often we, we push it aside and say, no, they couldn't possibly do that.

But we've learned so much out of the COVID debacle that they actually can do that. And when you've got people like Bill Gates openly saying, oh, we need to put a blanket around the planet. Uh, you know, and we need to put some aluminium up there and start to slow down the global boiling process. That by now should get everyone's hair standing up on the back of their neck because he's the philanthropist who said in the 1997 TED talk that the best way to solve the problems of the world was to reduce the global population by 17%.

And then he comes out as the father of vaccinations that he wants everybody to be vaccinated to save lives. So does he want to reduce population or save lives? Then he owns most of the agricultural land in America. He controls most of the seed stock around the world. And he comes out and says, I want to put a blanket around the planet.

Uh, to stop global warming, global boiling, you know, as skeptical as I am. And you are. I mean, I look at clouds and I still think they're magnificent. I really do. And I, I'm concerned that a lot of people are really afraid of cloud and, and I'm not. I look at it and I, I've spent 50 years dancing with clouds in my Yeah.

But, but I'm also in a position to know that. With all the stuff that's gone down and the fact that nobody trusts anybody anymore, I believe it's beholding on governments and people's representatives to look into this as much as they can. And I agree with you, a photo of a cloud is not evidence. If there are aircraft painted in civilian Airline colors doing stuff and, and Dane Wiginton said to us, I think it was off edge on that 400, there, there, there are 400 civilian aircraft painted in airline colors being operated by military for spraying.

I want to see the evidence of that. I want to see where they're parked. I want to see who's flying them, who's maintaining them. And if this is, if this is a scheme that's going. Massively the way it is, there has to be a million whistleblowers ready to come out and speak about it, but they're not coming forward.

But nevertheless, the people are afraid, the people are, um, rightfully concerned given everything that's happened. And I, I really believe, as much as I'm skeptical about some of it, I really believe that it's well and truly on the agenda if it hasn't already started. And people like Dane Wiginton will tell you that it's well and truly been started.

I think it's beholding on us all to take it seriously. A little more. I was I have been flipping about it in the past three years because I've never seen evidence of it. I knew that that there were concerns out there. And when I was flying, I was looking for evidence and I never found any. But, uh, given the state of the world at the moment, I really think that we need to we need to.

Take people's concerns seriously, even if it's so that we can say, look, we've, we've got all the evidence. We know what's going on. We don't think you should be concerned about it. Or if there is something to be concerned about, then we should be putting plans in place to fix it. Um, and that's, that's where I'm at with it.

Um, and I, and my, I want to encourage. I know Malcolm Roberts has put up a website or something where he is asking people to give him evidence and all he is getting his photos of clouds. Uh, gotta go beyond that. It's, it's gotta, the evidence, the evidence that I would find compelling is somebody would take a video in the hangar of, you know, 144 gallon drums going into a plane and it could even be video on the plane and 'em spraying it out.

Then the video comes back. Now we're just not seeing that clouds are random. Clouds sometimes do look unusual. Um, so look, I will watch the video that you had the other night. Um, I, I mean, look, the other question

I have on the subject is, what, what is their purpose of doing it at the moment? Now, I'll be 100 percent with you that Bill Gates and the Club of Rome, and I didn't even think the Club of Rome was a real thing up until two months ago, one of their clowns came to New South Wales Parliament.

And I gave them a hard time. Uh, I used to think the Club of Rome was like the Illuminati. It was just sort of this fictional thing. No, no, no. The Club of Rome is a real thing. And they, yes, they want to reduce the population of the world. But what they're talking about is they're talking about spraying it like seriously high up in the stratosphere.

And they're not saying they're doing it now. So this stuff that apparently, look, you know, I'm still, I don't believe it's happening, but I've got it. I'm going to watch a video from the other day. Um, but look, there would be, what, what, what, what are they doing it for? Are they trying to kill us? Are they trying to change the weather down at the lower level of the atmosphere?

I mean, is it the government doing it? Is it private, private people doing it? When we don't know this, look, I'm, I, I think it's, um. We look, we don't know. There are people who say that they do know, but when, when there's a concern, it should be investigated. And, and, uh, and I think there's enough people have been harmed enough by, uh, by a lack of proper investigation and censorship.

We've seen that with doctors being canceled and, and everything through this COVID madness. I think it, I think it beholds people's concerns to be taken seriously. Um, And because everyone's being triggered, you know, what the, the, the place where I'm coming from with all of this John Ruddick is this in the last.

Fifteen months that Michelle and I spent touring the country talking to 30,000 people at 300 gatherings. The anxiety levels are high. The people do not trust anybody anymore. And of course, when fear is the core of every narrative, uh, the only thing that comes out of that is compliance or rebellion. So people need to be reassured.

A, it's not going on, or B, if it is going on, we need to look at it, and we need to have a serious look at it. Because every time they write to their politicians, they're getting flippant replies. And, and, and I think they deserve better than that. I think the people of Australia who have been through this madness actually deserve better than that.

I'll be honest, I'm very skeptical about chemtrails, but I really do feel that, um, that weather modification is a thing that we need to take seriously, especially when you've got multi trillionaires like Gates talking about putting an aluminium blanket around the planet. I mean, that gets a hair standing up on the back of my neck, and that's why I took this on from a different angle in recent times.

Anyhow, um, So yeah, watch that and, uh, see what you think, um, we'll see where it goes from there, but I had to ask you, given that you're a politician and a lot of our viewers are concerned about this, I had to ask you and, um, and it does come up. It does come up. And, um, so, uh, what was the name of the person you interviewed?

Uh, Dane Wigington, he's the head of geoengineeringwatch.org. Now I don't, I don't agree with a lot of the stuff that he puts up as evidence and I, I sort of indicated that to him and, and he was, you know, obviously very defensive about all of that but, and that's fine, I expected him to. But when I look at the sky, I see what I've been seeing for 50 years in aviation.

I've seen a bit more of it. And I explain that in, I'll explain that when we do the program on what makes condensation trails and explain why. But the levels of anxiety amongst people, I think we need to take seriously. And I think we ease a lot of that anxiety when we, when the people know that we're taking it seriously.

And otherwise what ends up happening is, um, mass hysteria about, you know, I go back to that, um, uh, Orson Welles. Radio play in the 1930s, War of the Worlds. The whole country was convinced that Martians were invading America. And it caused havoc. It caused absolute mayhem. And I for one would like to know, A, whether this is really happening or not.

And, uh, and I think the people of Australia deserve to know. That's just my own view. And, and, and I haven't changed my opinions much on any of this at all, other than when you watch the interview with this Dane Wigginton, there's a consensus at the end. And that consensus is, John and I are fighting for bodily autonomy.

That's our, that's our lane, that's our battle. And in fighting for bodily autonomy, we want the immune, the God given immune system of human beings to be given an opportunity to heal itself. That's a natural thing. Now, people don't trust that immune system or they've got immune deficiencies and they want chemical help to do that.

That's their decision. And Dane Wigginton comes across from the same angle of, we should be letting the planet heal itself. Because when you've got a whole bunch of people who are claiming man made climate change and this global boiling cult that's going on, and they're proposing a man made solution which has put an aluminium blanket around the world, what could possibly go wrong, right?

Well, look, it's, look, it's the most, uh, uh, look, I, it's the most absurd thing, and it's like, you know, we grew up watching cartoons of some, like, evil maniac trying to take over the world, now, um, you know, look, life on this planet has been around for a very long time, and, you know, there's, you know, thousands of different species, probably hundreds of thousands of, you know, trees and panda bears, and, you know, insects and everything, and we're the smartest, we've got the biggest brains, and we sort of run the joint, and, Uh, that's been quite a recent thing that we've taken over the world, but we have taken over the world, and that's a good thing, you know, I'm proud to be a human.

But to think that we could be so dumb to go and sort of meddle in a serious way with the atmosphere and stop the amount of sunshine coming in here. I, uh, you know, I would just hope that there were, if they ever got to the point where they were going to be sending up rockets. To go and spray this around the world.

We would absolutely need to have a serious people's uprising and riot to stop it in the name of all life. You know, this would be humans going totally mental and trying to destroy the whole thing. Yes. And all these people are criminals, no doubt about it for, for if they. Yeah, look, they are being honest that this is what they want to do, but it sounds as though it's sort of they're thinking, well, look, if we don't, if we can't stop global boiling, then we'll do it.

So they're not saying that they're doing it now. And we would have heard about if they are doing it now. Well, as somebody pointed out from the US in an interview we did with Kristen Megan. Um, some time back, she was one of the ladies with Tammy Clark who got mask mandates dropped in America. Uh, she was a whistleblower for the Air Force on, on, uh, chemical dispersals in atmosphere, in, in atmospheric conditions.

Uh, she got whistleblower protection and she's got some very credible evidence that the Air Force was playing around with airborne chemicals. Um, she said, That, um, if the, if the government is talking about it, they've already started it. And, and, and I think given what we've been through with COVID, given what we've been through with COVID, I mean, you just said, you know, the thought that they would actually go up there with rockets and chains, that's crazy.

We should all fight for that. And Dame Wigginton says, if that's proven, then that's when the torches and pitchforks will come out. Everybody will come out, but we can also say the same as what they've done with COVID. They have, in the minds of many of us, they have manufactured a virus and then manufactured a countermeasure to counteract the virus that was manufactured.

It's, look, it's clear as the nose on your face that that's what's been going on. And a lot of people are going to have to answer for that one day. So they're already doing it medically. If they've injected 70 percent of the planet with this technology, Then they're capable of doing anything and we need to take that seriously and, and, uh, and we need to look at all aspects of it.

I mean, people, people really want to have faith in something again and that, that's why my Christianity holds me together. My faith in Christ holds me together and, uh, and I, I couldn't let you go, given what you were saying about global boiling, uh, without asking you to at least have a look at it and think about it.

And some of the stuff seems far fetched. And it may be. I don't know. I don't know anything about that stuff because I haven't spent 20 years researching it like Dane Wigginton has. I've spent 53 years flying around in the sky making condensation trails and feeling quite happily innocent about doing that because I know how they're made and I know what's in them.

It's water. But I can't say with any certainty that other things haven't been done. I can't. I didn't think the world would inject the majority of its people with a, with a serum that's likely to kill them. I didn't think they'd do that either. I didn't think we in Australia would be talking about smart cities.

So, well, you know, there have been, you know, I'm, I'm, I'm absolutely open to changing my mind and I, I'm proud that I changed my mind. You know, when the facts change, you know, so does my view. I know people that have the same political views in their 50s that they had when they're 20s. They never change.

Well that tells me they're not thinking. They don't have an open mind. That means they're not really. They're not, they're not, they're not a valuable thinker. So I do change my mind on subjects. So I, I remain skeptical. I brought up Dane Wigginton. I will, uh, I genuinely will give him, give him a listen to tonight.

I'll listen to your recent show with him. Yeah. And there's some material that he puts up. And as I said, a lot of it has aggravated the aviation community because there's some things he's saying that. Happening that we don't, we don't see as possible, uh, from an aerodynamic point of view, from a meteorological point of view, and that's an atmospheric point of view, because we spend our lives working with that stuff, and some of it appears and comes across as far fetched, and some of it I'd blatantly disagree with, and, and we had a conversation about that the other day during the interview, we talked about that, we didn't record that part of it, but he, he knows that I'm skeptical about some of his stuff, but 20 years of research, and, And some of the evidence he brings forward and some of the philosophy behind it, I think is worth for people in power to, to take seriously.

Uh, because if they don't, I think they, they, they, uh, they don't like that. If we don't take the fact that the mRNA vaccine could be deliberately set out to harm people. If we don't at least think that that's a possibility, then we're missing an opportunity to tackle evil head on. And I think we've, I really think we've got to look at all the aspects that are concerning the citizenry of our, of our planet because we're all sharing the same home.

I could, I could preach a shorter sermon, but once I start I get too lazy to stop. But anyway, that's where it is, uh, John. So, uh, Johnny Lada. I'm heading over to you now that I've blurted all that out. Well, I think we should let John finish on a positive. Is there anything else you wanted to bring up, John?

Ah, well look, Thursday the 25th of January, the Libertarian Party is having an event in the Rocks. Um, so you can find the details of that on our website, which would, you know, everyone would be welcome to come along. I think there's not that many tickets left, but, you know, hopefully. Ah, but look, we got, ah, I have moved a bill in the New South Wales Parliament, which will be debated in February, March.

Which is a free speech amendment to the New South Wales Constitution, cut and paste from the US First Amendment. Uh, so I've already given a 15 minute speech on that, and then we're going to be debating it soonish. Uh, now I don't expect the Labor government to support it. Uh, it'll be interesting to see what the Liberal Party does, because I mean, they are meant to be the Party of Freedom.

They weren't particularly the Party of Freedom during COVID, of course. Uh, so, but, uh, but look, I want to, I want to hear, I want to hear them say why they're not going to support freedom of speech. Well, hopefully the Liberal Party will. Hopefully the National Party will. Uh, there's a few other good crossbenchers there, Mark Latham and Rod Roberts and Tanya Michalik.

Um, shooters are often good on these free speech subjects. So we'll have a debate and look, you know, we, we can get it out there and, uh, so that will be one thing and then we're going to, um, uh, you know, we've got a few, a few other exciting projects this year, gentlemen, which I'll be more than happy to come back on the Club Grubbery and, uh, to share with you and the listeners.

Yeah, it's great to always have you on too, mate. And, uh, also some reminders for people, John, there is a, um, We're hearing more about a Farmer's Rally in Canberra on the 6th of February. We've got the 2 4 1 event happening on the 24th of January organized by Jody. Um, fantastic event and people are getting really excited about that.

And, uh, also we've got, um, some other things that we're going to be talking about happening on the calendar in the next few weeks. And looking forward to Tony Abbott and some more exciting guests from the U. S. as well, hopefully. So, uh Uh, great to have you on, John. We'll ask you to stay on the line after we stop recording for a second.

And, um, Johnny, anything you'd like to add before we close with a prayer? No, I think that's, uh, that's been a great interview. And, uh, I think everyone will love it. I think we've got it. First, did you, did you meet Harvey? Did you talk to him? No, no, I met the foreign minister. Uh, so I didn't, didn't unfortunately meet Harvey Belay, but hopefully one day, yes.

And the other question that a great many people who follow you and Ross Cameron will want to know, did you both learn the tango while you were there? Uh, no, no. We, uh, next time, next time we'll do that, then we'll make a video for you. Uh, hoodie. Yeah. I'll ask everybody to bulk erase the thought of even those two dancing together.

But anyway, there it is, mate. Um, I'll bring it to a close with a prayer if you like. Okay. Lord, father in heaven, we thank you for the Sabbath day and, uh, we thank you for the day of rest that you are giving us. We also thank you, Lord that, um, that you, uh. You are making it possible for us to talk about issues that are on people's hearts and minds and that we can hopefully alleviate some anxieties and get people focused on just how great this country is and what we have to do to bring it back to its glory to.

Those times that we mostly grew up in, that our children and grandchildren may struggle to live in. And father, we just need your help to do that. So God and lead us, help those who are anxious to realize that what they did yesterday got them to today. And we ask you to, to be with John Ruddock and his initiatives to bring about smaller government and a libertarian lifestyle in Australia, because it's very attractive, very attractive indeed.

And so we thank you for that. And we thank you in Jesus name. Amen. Johnny Lada, you've often been heard to say, you just couldn't make this stuff up. You couldn't make this stuff up and stay out of the trees. Everybody Club Grubbery coming back to you, uh, through the week with some more great interviews, some more stories as they come to hand, some pretty exciting things happening.

Cafe Lockdown, John bringing out, I think they're launching 21st of, um. of January. They're launching the, um, the D. A. E. N. Sharon Cousins and some researchers have done some great work looking at the at the stats on COVID injury, a vaccine injury and vaccine deaths. So, that's gonna be a big event. We're gonna be following that very carefully as well and good on Cafe Locked Out.

Always doing the duty of Cafe Locked Out as we try with Club Grubbery. God bless you all. Thanks for watching us. John Ruddick, hang around for a moment and we look forward to seeing you next time on Club Grubbery. Bye for now. Thanks for having us, gentlemen. Thank you, man.
