

Raw transcript of interview:

Graham and John speak with Dane Wigington about geoscience issues...

Published

2024/01/16 at 3:34 pm

Well, hi everybody, Tuesday, the 16th of January, and welcome to another episode of Club Grubbery. And John, great to have you back on, mate. Mate, it's an absolute pleasure to be back and, uh, what a, what a great interview this is going to be. I know you've been looking forward to this. And so have so many of you.

Our viewers out there, uh, it's going to be fantastic. Yeah, look, some of them we put the promo up and, um, and, uh, we, the promo has had more hits than, than a lot of the material we put out lately. A lot of people in Australia are seeing this as a prize fight between Cassius Clay and Sugar Ray, whoever he was.

Um, but I can tell you, you're going to be disappointed if that's the case. So that's not happening. Um, as my wife ducks down in the corner behind me and, uh, we're just going to have a really frank conversation with a man. You know, I've got to be honest, I really have to be honest, I thought our guest tonight was a nut job.

And this goes back a long time because our guest tonight is Dane Wigington, who is the founder of geoengineeringwatch.org. Welcome to the program, Dane. Thank you, Graeme. Thank you, John. And I have to say that in arranging this interview, which I started the process of doing about three weeks ago, Dane and I have been emailing backwards and forwards, and I've shared some of the things I'm concerned with.

He's shared a few things he's concerned with. And it got to a stage where we thought this might all be too difficult, but we reached a point of mutual benefit in the whole thing, because at the end of the day, all we want to do is understand what the real truth is. So before we go into the interview proper, I want to do a little bit of an editorial.

John and I have been heavily involved for the last three and a half years in trying to find truth around the COVID narrative. To that end, lots of people came together in Canberra and that can be seen. That's Australia's national capital. Behind John on the 12th of February, uh, 2022. And a massive rally was held that was said to be the largest rally in Australian history.

And most people were there because of what happened with the pandemic restrictions, COVID lockdown mandates. Most of those people back there had lost their jobs because they wouldn't go along with the medical mandate. So that has been the thing, the catalyst that woke John and I up in particular, and we've been fighting on that battleground ever since it started.

And there have been a lot of peripheral issues that have been brought to our attention as we've gone through the process. There are a lot of people concerned about wholesale pedophilia around the world and pedophile networks. There are people concerned about chemtrails and flat earth. And all this has shown to me in particular, as I've journeyed this country with my wife over 70,000 kilometres.

We visited 300 communities. We've spoken to 30,000 people in our national tour of community unity, and we have never seen a people so perplexed and anxious, and I've often said that if Australia was a person, uh, it would be in the psych ward. I've never seen such anxiety. Suicide rates have gone through the roof around the world, not only here in Australia.

And that has been driven by a global elite who are. Who are convinced that the only way to control us and the narrative is to feed us on fear and we've been fed on fear for hundreds of years. That's been aided and abetted by the, uh, by the news media, by governments, who are the largest purveyors of misinformation in the world.

There is no doubt about it. And while I used to scoff at conspiracy theorists, I am now a conspiracy realist. I've woken up, I've woken up to a lot of issues. And I want to say this to government people who are watching us because at the moment they're trying to bring in a bill to stop misinformation and disinformation.

I can honestly tell you that misinformation and disinformation is coming from the highest levels of government. And not only that, these theories thrive when governments don't tell the truth. And we're in this position because you are not telling the truth. As we look at the world as it stands today, Dane and I agree, it is a very dark place.

It is a very dark place indeed. Um, evil has become the new good. God has been cancelled. Men and women have been cancelled for some new kind of gender arrangement. We're seeing transhumanism now being pushed by Klaus Schwab the World Economic Forum and Youssef Harari who seems to think that humans are useless and need to be done away with.

I mean, the whole concept has been turned upside down and inside out. And the people of the world are becoming Untrusting, they don't trust anything anymore. They don't trust government. They don't trust corporations. They don't trust banks. They don't trust, um, insurance companies. They don't trust non-government agencies, charities, even churches, and not trusted.

And we're in a position now where we're starting to not trust each other. And Dane, I have to tell you that as a pilot of some, a captain of 32 years, when I've seen the chemtrail debate put in front of me, I've looked at it, tried to look at it from a perspective of trying to understand where it's coming from and is there anything that I'm not seeing?

Is there anything I need to be looking for? And I've spent a lot of my life trying to find out Not ways to debunk the chemtrail debate, but see if it's really happening. And I've struggled to find stuff, so I'm really glad that we've got this opportunity. But as it stands in Australia today, I'm seen, compared to you, as the Antichrist.

I'm seen as this guy who's spent, uh, 53 years in aviation killing people from the sky. And that is There is nothing like that. That's even close to the truth. And I'm speaking for so many people in civil commercial airline aviation who are in the same boat. And as a result of that, it's been hard to watch a lot of the material put out by geoengineering watch because we get to a stage where we say, well, no, that's not true.

No, I don't agree with that. That's not right. And after a while, you start to wonder. How much of what's being presented is actually true, and how much is so easy to debunk. And I've made myself watch a lot of your presentations. I've made myself watch the Deming three or four times. I found the first half of it hard to watch because I didn't agree with a lot of it.

But the part I did agree with scared the daylight out of me. And this is where I want to go with you today. And we're going to, we'll obviously talk about some of the things that might slightly divide us. But I think we've already agreed that the things that divide us are nothing compared to those that unite us.

So to that end, I'm really looking forward to this conversation. And um, I want to start. If I may, I, first of all, thank you for coming on, uh, thank you for having the courage. Um, you've got big kahunas, buddy. You have, uh, you have stood up, uh, on your platform for 20 odd years and, uh, nobody can doubt that you don't have the conviction and that you certainly have a lot of knowledge.

I know that you grew up in the, in the Los Angeles basin and as a result of pollution you saw over LA in your, in your childhood, you had a yearning to be in the forest. To be out in nature and to that end, you've done that. So unpack a little bit for us, if you would, of your life prior to the discovery that all of a sudden you weren't developing as much solar energy as you thought you'd hope to.

I'll get right to that, Graham. And first I want to say to you, to John and to all your listeners that geoengineering watch has never, ever in any way implicated commercial pilots or commercial personnel. We fully, fully state that

we have never seen any data. That would in any way implicate any commercial personnel having any direct involvement with these programs.

We are working with commercial pilots covertly that are aware of these operations taking place. And they are circulating our booklets. We have 20 page color fact and photo summary, booklets, non political, extremely damning images, satellite images, uh, the federal gag order, national weather service and no employees, the nation's weatherman.

Why would they have a federal gag order on them? And the pilots are circulating these, uh, in the pilot lunchrooms and so forth. So I want to state that clearly. We certainly have never pointed a finger at. At any commercial pilots or personnel in regards to me being here off the grid and that skepticism that I once shared.

Also, when I first heard about this issue, I thought that couldn't be. I have some background in solar and my home was on the cover of the world's largest renewable energy magazine, and I initially thought if this was happening, I would know about it. This is prior to me building this large off grid home, by the way.

But once I did. It was my large solar system and losing on some days, 60, 70, 80 percent of my solar PV uptake from whatever these aircraft were emitting. I absolutely knew that could not be quote condensation. And that doesn't mean for your listeners. So they understand that's not a loss of 80 percent of visible light.

That's direct sunlight. Loss of direct sunlight means PV does not work. So I began to test my precipitation. Um, I looked for, I was astounded at the amount of data there was on geoengineering, solar radiation management, stratospheric aerosol injection. I looked for the primary elements named in those patents and began to test my precipitation.

Had hoped, prayed I would not find it there because I knew if I did it would alter the entire course of my life. I did find it there. First rain test of seven. Uh, PPB of aluminum, which in my filtered forested location, nothing. West of me before you hit Asia should not be there. I talked to geo hydrologists, confirm that subsequent tests over the next 18 months saw that level rise as high as 3, 450 PPB.

That's highly toxic rain. That's aluminum, by the way, aluminum nanoparticles in that rain. And for those. That try to stand on the lie that because aluminum is an abundant element in our strata, we should expect to see it everywhere, including our rain. That's not free form. Aluminum free form. Aluminum does not exist in the environment.

Naturally, it must be mined and refined and distributed or dispersed in order to be there. And it was there. So that's what started my journey, Graham and John. And I, I have not looked back since I can't in good conscience, look at my children or myself in the mirror, or certainly not face my maker and know that I.

Had not faced this battle. So here I am. Yeah, John, I think you and I would both agree. That's why we're in this battle. We, um, we're not doing this for us. I mean, I turned 71 the other day. My life's just about done anyway, but I can't leave a world that I'm seeing deteriorate in front of my very eyes for my kids and grandkids.

And it's the one thing that we three agree on. Wouldn't you agree, John? Hoodie. Yeah. And I think what Dane just, just said, just to kick off things, uh, is really, uh, comforting, uh, for everyone. I mean, because I know it's been, uh, a real issue for a hoodie and many others that have flown commercially for years and years.

And there's been a lot of, uh, insults made. Uh, and derogatory, uh, remarks about, uh, commercial pilots spraying, uh, people, um, with, with the commercial aeroplanes and people are looking up in the sky and seeing, uh, Qantas and Singapore Airlines and American Airlines flying by and, and thinking that, uh, those trails behind, uh, are leaving, uh, chemical sprays.

Uh, and, and it's good that, Dane, that you've been able just to rule that out. Uh, and. If we could stop, but before, when you, when you're done, John, though, if I could elaborate, because I haven't ruled that out. I've

ruled out. Not, not commercial aircraft with commercial markings. What I've ruled out is that we have seen no evidence to indicate that there is any direct involvement from commercial personnel or pilots, but with film footage, we know.

And with our testing, we took a National Oceanic Atmospheric Administration lab to altitudes all in the dimming and with the sampling we took and the film footage we have, whoever is piloting those planes, and we have evidence to indicate DOD has leased at least 400 commercial aircraft with commercial markings, we have United Arab Emirates, KLM, we have FedEx, we have all these aircraft emitting what can only be concluded as being a sprayed dispersion because we have up close photographs of nozzles, retrofit nozzles on the wing pylon into the exhaust jet stream with dispersions being turned on and off.

So again, definitely not implicating commercial personnel or pilots, but we absolutely have film footage of commercial aircraft leaving dispersions. We'll get to that in a moment, uh, Dane, but how has, how has this changed your life in an everyday sense since you discovered this 20 years ago? I can scarcely remember my life before, Graham.

Thank you for asking. But I, as I tried to indicate in the dimming and I knew even before I faced this specific battle, that there was something I, I, I, the world was hurtling towards what could only be imminent collapse. And I, I knew. I needed to dedicate myself to that. And I restored habitat in the forest here on an, on an industrial scale.

And that's one more false narrative that the forest are burning down. And you've certainly paid your price for that in Australia burning down because we're not allowing enough fires or we're not clearing enough underbrush. The forests are off balance one because of irresponsible logging here. They have decimated the forest in Northern California, but two, and most importantly, when the rain is toxic, when climate engineering is destroying the ozone layer and totally disrupting the hydrological cycle, that is the key core factor that is causing forest to burn period, no matter what the source of ignition, and that's a secondary subject, the single greatest causal factor for the forest incinerations is.

Climate engineering operations, setting the template for the forest to burn with that kind of ferocity, and we found U. S. military documents, one titled forest fires as a military weapon that describes exactly the kind of forest preparation that we saw, Australia, the Northwest, Maui, there's no question this is going on, absolutely no question, so again, source of ignition, separate subject, um, uh, What is setting a template for these forests to burn?

So back to the original question, my life before restoring habitat and solitude on an industrial scale, working actually with federal and state officials, I did six cooperative programs that I ran myself. But why would I stay there when I knew this overlying problem would make every bit of that work completely pointless?

And indeed it has. Because we have the predominant tree in Western North American forests, the Douglas fir tree. Is completely imploding. Recent science study titled Firmageddon. I think the term speaks for itself. Every single fir tree in this forest is in some stage of death or already dead. Trees die.

Pull you up there with an observation my wife and I made driving through the forest in, uh, near where we live in northern New South Wales. It was pouring with rain and we're driving around this mountain road and all the trees were frothing. Like they'd been through a car wash and the road was covered in foaming material running off the trunks of these trees.

Not from the base. So it wasn't caused by anything that a farmer had sprayed on the property that we were driving through. This was running down the full length of the trees. And I've never seen that before. And I've asked other people, have you ever seen trees emitting soap suds? Have you got an explanation for that?

We do. And it's from lab testing. It's surfactants. And surfactants are named in climate engineering patents, they're, they're named in the materials lists for those from companies like American Elements. And I hope, I hope it's clear, I'm not shooting from the hip on any of this. This is from 20 years of nonstop research.

But surfactants. alter the molecular attention of water molecules. It's what makes soap soap, and it keeps the climate engineering dispersion particulates, nanoparticles from coagulating from sticking together as they coagulate the descent times increase radically because it's a larger clump. So the surfactants are associated with that.

We see it here as well. And we, from. recent lab testing with a major internationally recognized agricultural institution we're working with now. We have now confirmed that they are also spraying defoliants. And this is to force deciduous trees into dormancy because the temperatures are not cold enough any longer to cause that to happen.

So what we see happen, Graham, John is, and we noted this 10 years ago, we were just able to perform conclusive testing. Um, this last season, but we see after specific rains in the falls, deciduous trees of many species, the leaves will die and hang on the trees. And if they're in a sheltered location, they may hang there all winter long, fully foliated with stone dead leaves.

That's not nature. That's not nature in the abscission hormone, releasing that leaf. That is a forced. The foliation and we now know that is occurring as well. So this is quite a witch's brew of materials coming down on us and the overall toxicological effects are certainly grave. Okay, well, man, there's a whole lot we can unpack here and maybe we need to get back together at a later stage and talk about some of that stuff as well.

But I am, I'm stating clearly that I'm utterly convinced that geoengineering is happening and it's happening on a large scale. We are seeing incredible weather events around the world that are very hard to explain. Now, From my perspective, I look at what the globalists are trying to do with climate, the climate change agenda, and that's a whole operation to manipulate the population.

There's no doubt about that. And it seems bizarre to me that it, that it is highly likely or possible that they're using the kind of stuff that you're talking about to create the climate change that brings about the solution they want. Where do you go with that?

I, I wish that that were the sole factor in this equation and Again, my, my focus is definitely to stop the intentional interference in the planet's life support systems, which was first fully deployed immediately after World War II, and we can go over that in a moment because we have film footage, as you saw in the dimming of B 17s in formation, shutting dispersion off in midair, and although they had water vapor injection systems on them, those were typically used during takeoff, not Information in flight.

So were they beta testing then with the bombers, but the film footage is certainly compelling. Whatever that dispersion was, it certainly wasn't condensation. But if we look at the state of the climate, it's imperative to remember that all forms of human activity. And I want to, before I state that even, I want to make clear, I am no fan of Al Gore, AOC, Sierra Club, any of these environmental groups that are displaying immense hypocrisy by their total denial, systematic denial of climate engineering.

So I have no love for any of these people. But that being said, any human activity, any form of human activity that interferes with the Energy balance of the planet is a part of the problem. We're going through 100 million barrels of carbon fuel a day. 23 million tons of coal a day. We're cutting down the forest.

We're down to about a third of the original tree cover. We've literally lost 60 plus percent of the forest that were here before the dawn of civilization. That's profound. How does one get their arms around that? Plankton, for example. Now down 90 percent in the Atlantic based on peer reviewed science study in 500 locations.

Plankton, the largest oxygen producer, CO2 absorber. We have decimated the planet in countless ways. I mean, where would we even start to address that equation? But intentionally interfering in the planet's life support response has made an already bad situation exponentially worse, putting us from the proverbial frying pan into the fire.

So now we have a decimated ozone layer, which climate is during is the core causal factor in that equation. I can elaborate on specific statistics there. So we have, in the case of the forest, with the toxic rain falling, we have period studies to prove that bioavailable aluminum affects root systems, causing trees to shut down nutrient uptake.

When you're in the forest here now, Graham and John, You smell no forest smell. There is none because the trees are not breathing. Their stomata, the respiratory ports are closed. They're not absorbing carbon. They're not releasing oxygen. Same is true in tropical forests as well. They're no longer carbon sinks.

They're carbon sources. Climate engineering has radically further fueled that equation. So again, we try to unite the tribes at GeoengineWatch.org to say, look, we recognize these. That we have been horrible stewards of planet earth. Absolutely horrible. And that can't be denied. But that being said, this intentional willful interference in climate engineering, I want to make this clear as well.

There is no benevolence in climate engineering. It's not some act on the part of the controllers. To do something benevolent to save the planet and populations. This is malevolent from top to bottom. It's weather warfare from top to bottom. It's an attempt to mask and I'll leave it at this. It's an attempt to mask the true severity of damage done to the planet already and the immediacy of what's about to hit us while inflicting even more damage in that process.

If that makes sense. My jet of choice, uh, in fact, the only jet I ever flew in my 32 years in command at Qantas was a Boeing 737. And I would sit up in the sky there for hours, droning across to Perth on the other side of the continent from the east coast. And I would see dozens and dozens, if not hundreds of aircraft in that five or six hour flight, whizzing backwards and forwards past me, some leaving condensation trails, some not.

And the one thing that used to irk me was That it costs people more to park their car or to get a cab to the airport than it did to fly. And it overawed me how many people were flying for no apparent reason, because in a basic flight from Brisbane to Perth, I would leave 12 tons of kerosene in the form of burnt kerosene in the atmosphere.

And I was one of 100, 000 flights a day around the world. And even that alone, before I ever saw any of your stuff, used to concern me. Most of the fear that I have witnessed when I'm out there meeting the people in the community of Unity Touring that we're doing is around what they're seeing in the sky.

I have had, um, I've had elderly women say that they look out their window before they hang the washing out and if they see a trowel in the sky, they won't hang their washing out there. They're terrified that they've been poisoned. There's even an ex military officer in Australia, retired military officer who has a profile out here.

Who was questioned at a town hall meeting he was at recently by somebody who said, what are you going to do if you're elected, uh, in office about all the chem trials? And the person said, did you, for example, see the chem trials today? This guy replied and said, all the chem trials today were good ones. So they were the good guys spraying the antidote for what the bad guys put up yesterday.

And when he said that everybody cheered and clapped. Um, so there's a lot of really weird narrative around this whole debate, as there is with COVID, as there is with, with climate change. And I think it really beholds us to try and put a level playing field out there. Kirsten Mogan is a whistleblower that you featured on The Dimming.

And, uh, she very highly recommends that people go to your website, um, geoengineeringwatch.org. And I'll just play this quick couple of minute clip. Let me ask you the one question, the one, the one, uh, thought in my side

as a result of my professional career. Is that, uh, that, you know, you've got to tell the truth about all the spraying you guys are doing up there.

Now, I was a commercial airline pilot for 32 years and a pilot in aviation for 53 years. I have never sprayed anything in the upper atmosphere. And you guys are flying around all the time. You're always in the aircraft. Do you think the aircraft that you fly, United, Delta, whatever, do you think that they're spraying chemicals?

I don't think so. I don't think it's involving commercial aircraft and there are things called contrails. As you know, that's very real. We're talking about persistent, uh, I don't like the term chemtrails. It's, it's, that's not it. Um, you know about military, do you know about military chaff? Like, I, I believe that this stuff is going on.

I, I don't believe it's going on in commercial airplanes. Uh, have you seen any of the film footage, John? I have and look, I've got to say what, what worries me is. I just don't know how a captain, a first officer, a second officer, and in some cases, a flight engineer can be wandering around an airplane on the ground and not know these things are fitted.

Uh, it, it beggars belief. Uh, I would ask you this then, how does the entire medical industry not know injecting mercury and aluminum will do harm? How, how is that even remotely possible? How is it the entire medical industry? doesn't seem to know that wearing a mask and rebreathing your own exhaust and what amounts to a bacterial incubator can only do harm.

How was that even possible? So again, I would ask you to consider those types of questions and apply them across in every field. How is it that meteorologists That entire field of so called climate science won't acknowledge this massive part in the equation when we have the entire global climate science community saying we need to put jets in the air to spray particles, it's going to cover the sky, it's going to damage the ozone layer, it's going to disrupt the hydrological cycle, everything we see happening.

And yet they say we're not seeing what they're seeing every single field of quote experts, all either criminally ignorant of the field in which we're told they are experts or they're lying. So again, I would ask you to consider all the examples we have in that arena. I think, I think it's fair to say that I agree with what you say about the medical profession, it's not only the medical profession, it's, it's the media, for example, like news organizations where The big five W's of good journalism was who, what, where, when, and why.

And that's being thrown out for, uh, for commentary and opinion pieces rather than real journalism. And so it leads to people like you on, on the, uh, on the weather, on the weather modification front, people like us on the way pandemics are handled. We're all being led down this path that we're all nut jobs and conspiracy theorists, and we're being debunked at every turn.

And the last thing I want to do, Dane, is debunk you because I know the work you're doing. I know the hours that you're putting in, and it's not my intention to debunk you at all. And, um, and I want to, I agree that we should move past that because it's obviously a point where we are going to disagree. And I can do something later on where I can put that slideshow up and let people make up their own minds based on my information.

However, we do agree. We do agree though, completely. That we have seen absolutely no evidence at all to implicate commercial pilots or commercial personnel in any way being involved, and I can't stress that enough. We've never seen any any information. We've never stated otherwise. Thank you so much for that and I appreciate it.

And, but where I really want to get to is what really bugs me. In the dimming, in the last half, there are a couple of gentlemen and one of them you were asking questions of in some kind of a hearing. And this was a guy who's talking about if we put a million tons of some kind of material into the atmosphere, we can, we can Slow down the rate of global warming at a time when I thought global warming was debunked.

Now it's gone to climate change. The other thing that really bugs me is the world's greatest human being, Bill Gates, who has controlled the COVID narrative and is now controlling agriculture. Uh, by buying every piece of land he can find and controlling most of the seed stock, has now turned his interest to changing the weather to protect the people of the planet.

Now, most people who see through his arguments just debunk that straight away. Who do you think ultimately is in control of this stuff? Has your research taken you down any pathways that you can reveal? Certainly. And it isn't Bill Gates, and it isn't Dr. David Keith, who's the face of geoengineering disinformation.

That's who you mentioned that you saw. In fact, the film footage in the dimming is me confronting Dr. Keith at an international climate engineering conference after watching a three and a half hour symposium from Dr. Keith that was pushing for the immediate deployment of dispersing 10 to 20 million tons of aluminum nanoparticles into the atmosphere annually.

And my question to Dr. Keith there, again, your listeners can see that on film, on the record, on the dimming. Has any toxicological study been done or any EIR, environmental impact report? His first response was, I'm paraphrasing, but he said, we've looked at this. There's a lot of particulate matter in the atmosphere.

A little more won't hurt. Wait a minute. And again, there was a hundred journalists in the room. I was one with the press pass. There was about three questions allowed and they stopped after me. They didn't want any more. missteps. But I asked him that particular matter isn't aluminum nanoparticles. Have you studied that?

And he said this, no, we haven't. Could terrible things happen tomorrow? We don't know. Now, what kind of a question, what kind of an answer is that from the world's most recognized geoengineer, Dr. David Keith from Harvard? This individual is in As much of a tool for the power structure as anybody alive period and about gates again a prop in the play distraction, pretending that we should may might do this someday when it's been ongoing for over 75 years so the deception is.

Absolutely incomprehensible in this case. And look at Bill Gates is vaccination record when we have the government of India suing him. In fact, the statistics that we've found at G on during watch indicate that some of his vaccine programs in India may have damaged as many as a half a million Indian women.

Same in Africa. They run when they see anything to do with gates or vaccines now. And when we have these people stating that That 95 percent of the planet's population needs to go. Do we really think they're here to help? Well, a lot of us do sadly. And how do we get that message across to people in a way that gets them to take some positive action rather than just wallowing in fear, because a lot of people are stuck in the fear narrative.

It's really hard to get them out. And I think it's clear from what you're saying, and we do agree on this, that there are massive forces arrayed against us. And I believe we're in a battle between good and evil. And how do we get people to stay in the narrative that in a positive way, rather than being too afraid to come out and enjoy what's left of our planet?

Let me answer that. And I'll back up to what I didn't answer a moment ago. I'm sorry, I got sidetracked. Those who print the money. control the strings. They control militaries, thus they control countries and everything else, matrix media, everything. All roads lead back to those who print the money, those who control the central bankers.

There's a core of global cancer that has certainly been around for again, far longer. I don't want to get into specifics because people tend not to believe what they, they can't research themselves, but there is definitely a core of power. It centers around the control of money. We have a similar area, a longstanding core there.

involved with that. And that's where all roads lead. As far as the fear factor goes, it starts with the complete overturning of our philosophy that life is about personal pursuits of pleasure and living happily ever after and

having A McMansion and a, you know, whatever else goes with the quote, um, dream of modern civilization and all that's a total delusion.

And there's no, I would argue there's no foundational meaning in such a life and that the meaning comes from knowing that you are part of the cure and not the disease that you were doing everything in your power to make a difference for the better. And that's the kind of solace that can't be shaken.

The only thing we own any of us, you, me, John. Is our will and the correct exercising of that will and no one, no one can take that from us. They can put a gun at our heads and they cannot take our will. And if we stand on that kind of foundation, and as I ended the dimming with it, any one of us could be the final pebble to trigger the landslide of awakening.

And if we can, starting with what's happening in our sky, starting with climate engineering operations, which is connected to COVID and everything else, because we know Italian researchers have identified CV 19 attached to airborne particulates. We know we have graphene in the dispersions with center precipitation.

We have polymer fibers. Those are used for biological carrier platforms, aka to carry a pathogen from a cloud to the ground. All this is inseparable. But back to my point, if we could expose what's happening in our skies, something that we cannot hide from, we can hide from an injection. We can't hide from the air we have to breathe.

But if we could expose it, I would argue Graham and John, we would cause a shockwave around the world. We would drag everything to the surface with it. That's the proverbial pitchforks and torches moment. And that's when all those involved either actively or passively in the passively part, John connects directly to what you are, Graham, excuse me, what you said earlier.

I think it was you that said it, Graham. The media and their culpability in this, they are completely an accessory in this, and all of them would be, one would hope, held legally and morally accountable by a justifiably enraged population. Well here you see glimpses of that in the background behind John and, uh, that's the big thing that we're seeing though is because of, uh, of, uh, global media, lack of participation in what's really going on.

All those people in Canberra that were there, and there are, there's speculation about the numbers, definitely several hundreds of thousands. The media hardly covered off on it. Most of the people who were sleeping at home in their lounge rooms watching reality television would never have even seen that footage.

So the media's compliance with, with whoever's pulling the strings is driving the lack or the ignorance of people who refuse to see what's going on. It's keeping them asleep. You've been fighting that all the time. Are you getting any traction in the mainstream media at all in the US or anywhere else around the world?

I've had some. In fact, I did an interview with ABC Australia and they brought someone on to quote debunk me. It was supposed to be a 20 minute segment and after 10 minutes of their quote debunking effort going horribly wrong, they cut the segment because that's not what they wanted. I've been on CBS here in the US.

Um, and we've had, we, we, the, one of the scientists, not Dr. David Keith, but Dr. Douglas McMartin, who was single handedly responsible for getting the dimming documentary censored on Facebook. We sued him. And although as we felt would be the case, the system sided with Dr. McMartin, considerable attention was brought to him and those like him, that they are performing a task for the criminals in power by.

Using their position to hide the climate engineering, A. K. A. Weather warfare assault, and we sued Dr McMartin, and it was covered by Bloomberg News and other major media and the simple fact that we were willing to sue him in spite of the odds against us put a shot across the bow. I would argue of many of those scientists that we are not going to stand by and allow them to play the part of mass deception, and we need populations to realize again.

If the example I've used Yeah. On many occasions that however great the odds seem against us. If our child was in a burning house and we knew we had almost no chance of saving them, would we not try? And if we didn't try, would we not regret that? Every single day of our lives. And that is exactly the situation we find us in ourselves.

And now to re evaluate what life's about, why we're here and what we will do in the time we have. The best things in life aren't things, Dane Wigginton. Correct. It's people and relationships. And we're seeing so much of a broken heart. Our country has a broken heart. I'm sure the U. S. has a broken heart.

And the world watches with bated breath to see what happens this year in the United States. Your broader world view of perhaps what's going on over there might be of interest to some of our viewers as well. Um, we're hoping very soon to interview one of Trump's lawyers. Uh, on matters pertaining to the things that he's facing over there.

How on the edge is the United States of America at this time internally? A lot of people are predicting that there'll be a civil war. How do you see it? It's very much on edge. And I would argue what happens there, it won't stay within our borders. The moment there's not enough to go around, the moment the store shelves are empty, that's when Global Mad Max scenario kicks off in earnest and those in power know this moment is coming again.

Fisheries collapsing around the globe. Global Pelagic fish populations. The food fish down 90 percent crops collapsing everywhere. We have many factors affecting that so many related to climate engineering. VPD vapor pressure deficit gram on the humidity. You know, you follow that at altitude. We have many scenarios now because the desiccant particles being dispersed dry out atmospheric RH.

So we have Mhm. Not enough humidity in forest crops, plants shut their stomata, they have the intense UV, all of that combining toxic soils, crops collapsing. So back to the empty store shelves, those in power know that the moment that happens, the party's over, the game will change and they are not just going to stand by and allow populations to grab their pitchforks and torches and go looking for them.

I would argue they have much bigger cards that they are close to playing another pathogen release, likely something much more. virulent and lethal. And we have, and I'm not sure Graham, if you and John know this, but we have circles in Washington openly discussing the quote benefit of a nuclear exchange to put enough particulate matter into the skies.

To slow the warming of the planet. If they do that, the ionizing radiation will strip away what's left of the ozone layer. Game over. We're done. And back to the fires in Australia, southern hemisphere, which you should probably perhaps expect more of those in the latter part of this year. I know they're flooding certain regions right now in the Dane tree and Certain regions in Australia, um, the Dane trees for, I know your listeners know what that is for our listeners, the tropical forests in the north.

I've had the pleasure of visiting there before, but, and the, and we know Canada lost and Graham and John, I'm not sure if you know how much Canada lost this year. About 72, 000 square miles of forest, larger than the states of Florida or Georgia. That's how much burnt and the source of ignition separate subject climate engineering set the template for those forced to burn back to the nuclear bomb exchange seen as a benefit by those in power.

They are facilitating incineration of boreal forests to put enough particulate matter in the atmosphere to mimic the short term cooling effect. eruptions. That's how desperate they are. And we have peer reviewed science study advocating for exactly that. That's not just some consensus I came to. So that's, that's how insane they are.

So back to your question of America divided, or you expect conflict, uh, one way or another, I would be very surprised if we reached the end of this year without our collective reality. Being capsized. Wow, John. Well, it's

terrifying stuff, isn't it? Uh, I don't know what you can say to that, Woody. Uh, it's um, I mean, it's so difficult to, to really.

Take into account all this stuff. It's, it's, it's, it's mind blowing. Um, and it, it's a world away from where we were two or three years ago. Uh, and in some, some ways I think it's where we've come with COVID is a good thing, um, because I think it's opened our eyes up to what's. Going on in so many other, uh, places around the world and, uh, what people are up to.

Um, I mean, I, I, I certainly, uh, don't disagree with, with, with elements of what you're saying, Dane. I, I do believe that they are, they are altering weather patterns. I mean, I, I think I probably just am a little more comfortable. Uh, saying that, uh, for instance, you, you, you alluded to the, uh, the doctors and, and, and the vaccines.

Well, it would make more sense to me that they're adding stuff to the fuel. And the pilots don't even know anything about it. Uh, that, that, that seems to me, uh, to be a more logical explanation of what's going on than, than, you know, a Qantas pilot flicking a switch at 36,000 feet and sprang. I want to stop right there.

I, I, I want to completely stand with you on what you just said. We absolutely. Would adamantly deny that there's any pilot of any airline flicking a switch in the absolutely would adamantly deny that. And on the fuel additives, we do believe that is very much a part of the equation as well. But again, we do have up close footage of military tankers.

We have some really competitive, compelling footage if you guys haven't seen it, especially C 17s, KC 135s, um, even AWACS. So, but, but the bottom line is on the severity of what's happening. And this is what very few people are willing to face. This is simply outside of their frame of reality. Can't be true.

Somehow we'll take our way out of this. How's that going so far? Everything we do to try to take our way out of what tech caused in the first place only makes it worse. And again, for the notion that many people have that those in power. The vaccines or any other mass public health program they have for us.

Anybody who thinks that those in power are trying to protect them or their posterity time to wake up that could not be further from the truth. And no matter how dark the horizon looks again, I would argue. The moment when one decides to face that storm head on, no fear, no trepidation, to know that the only thing that matters is, as Graham just said, that our will, our relationships, that's the only thing we own.

Everything else can be taken. But the moment that one decides at their core to face that horizon and know that whatever happens, whenever they take their last breath, they won't have to turn away in shame when they face their maker, that's all that matters. That's it. You know, there's a book called The Great Controversy, which was written almost 200 years ago, describing everything that's going on in the world today, and it's based on Bible prophecy, and in that book, the author says that there, at the, at the time of the end, there will be a deadly taint released in the atmosphere.

Some of the, some of the material in there, if you haven't read the book, The Great Controversy, the last day chapters done, it's well worth reading, but look, I've got to be honest with you. I came into this interview thinking I want to prove a point about condensation trials. I, I really knew and understood that we had the same picture of the world pretty much.

And I've got to tell you, I can't argue with you. And what's more, I don't want to argue with you. I admire your courage for standing up. I admire your tenacity. You're a hard person to argue with. I want to ask a question. Do you ever smile? You just made me smile. Thank you. Thank you for that. And, um, yes, I, I have my moments, but knowing there are people like you, Graham and John out there keeps me marching forward in this battle.

And it is all of our collective efforts that can make that difference. And that's, that's why that. Uh, that end of the dimming and, and the editor that did that, by the way, did that from excerpts he took from my weekly broadcast.

I had no idea he was going to do that last five minute epilogue, which was really what I wanted to say to the world and to, and, and to instill in people that those in power are not gods and we are not helpless, and if we stand together, that we can cause that avalanche of awareness.

And if we could, if we could stop what's happening in our skies. Expose it, stop it, hold those that have facilitated it responsible, and we could allow the planet to respond on its own to the damage done. We could buy time, and that's worth fighting for. And no matter what happens, doing what's right will always, always be right.

In regard to the ancient traditions, even, even the Hopi prophecies, Graham and John, that stated in the days of great change, there would be cobwebs spun in the sky. That's interesting, isn't it? So, uh, and, and from the standpoint of why we're here, even the Stoics, and that's been an anchor in my life, Stoic philosophy since I was 14, and, uh, Epictetus and Marcus Aurelius and Seneca, but the people think the Stoics were agnostic, and that couldn't be further from the truth.

In fact, the position of the Stoics was it would be better to die a thousand deaths than to desert the post at which your maker had placed you. And I would subscribe to that with every fiber of my being for all of us. Absolutely. Well, what's the, what's the most practical way for people to gather evidence on this?

Because I think we probably would agree that taking pictures of Qantas airplanes coming into land or going over the top of my place, uh, with a contrail and sending me a video really isn't cutting the mustard, is it? No, people should stand on other evidence. For example, the, what we 20 page fact and photo summary booklets, it's.

A copy of the federal gag order there. There's an illegal federal gag order on our nation's weathermen Why in the world what could possibly justify that? It's against Yes. Yes. It's in our it's in our 20 page book. In fact, that was sent to us by anonymously When it was first implemented, it's just restricting any discussion of the agency's operations So, I mean is that not an incredibly massive red flag in and of itself and then we have I'm not sure if you two would have seen in tomorrow in the state of New Hampshire, there is going to be a vote, an anti geoengineering bill.

It was drafted quite well. In fact, it goes for a vote tomorrow. We don't expect it to pass. But the two New Hampshire elected officials that drafted that did. A very exceptional job. It certainly puts, um, helps to put this issue on the radar and sharing those types of things have have teeth and generate traction and put substance behind this, um, in incredible documented form.

And it is the undercurrent of awareness is spreading. I had two U. S. Congressman call me on their own time about three or four weeks ago, wanting to meet with me in the state of California. They know this is going on there. They're treading lightly, if you will, Yeah. Because this is definitely the issue.

They will do everything they can to keep from surfacing until the last possible moment, because if it is disclosed, every single weather cataclysm becomes a liability to governments all over the world that have either actively or passively participated. And they certainly have. The COP28 conference that just happened and all the COP conferences.

That is nothing but smoke and mirrors and strong arming of nations behind the scenes to either actively or passively participate. In the climate intervention insanity. So we have a cancer that has an unimaginable reach, but it is starting to fray apart as those that are, that are connected with that cancer realize they are going down in the ship that they have also been lied to that climate engineering isn't going to buy more time.

In fact, it's sealing our fate by the day. So all of our combined efforts are making a difference. We must reach that critical mass awareness, that hundredth monkey, if we can. It would at least, at minimum, alter the flavor of the coming impact. Have you had any insurance companies reach out to you, Dane?

Because it strikes me as, uh, in their interest. You know, when I think of weather events, uh, here in Australia that cause untold damage. Uh, like at Lismore with the flooding, uh, in, in our area. I mean, it's, it's horrendous when these weather events take hold that they cause a massive destruction.

Exceptional question. Thank you, John. Very exceptional question. Yes, we have. And what we have concluded is they are certainly being supplemented behind the scenes to shut up and toe the line. Companies like State Farm. In the U. S. Which we contacted. They appear to be supplemented behind the scenes again to not dive into this issue.

Obviously, it's costing them untold billions. Why would they not be interested? And they are not. So again, we're back to those who print the money can and are printing whatever they want for whatever they want. We know the Pentagon's missing. 31 trillion, something in that order in the last 20 years. Where did that even come from?

Let alone, how do you lose it? And that's just what we know about the black ops operations are who knows how big, so farmers are being supplemented, not to dispose their soils are being, being poisoned. And, um, we contacted the ranchers association in, in, uh, South Dakota in, in 2013, October 4th, 2013, there was a freak snow storm.

That killed 100,000 cold hardy cattle while at the same time, and we captured the maps because they took them offline very quickly at the same time. It started snowing at 40 degrees in South Dakota and October 4th, which is our autumn. It shouldn't be snowing, killing 100,000 cattle with a chemically nucleated mix because it sticks to the cows snouts and they won't breathe through their nose or through their mouth.

Excuse me. If their nose is clogged, they die. Four days later, there was 100,000 cows laying around the mud dead. That's It was 85 degrees and raining in Chicago, 89 degrees and raining in Kansas City. How in the world could you have 100,000 cold hardy cattle die? We contacted the Ranchers Association and they didn't want to hear a word of it.

Nothing. Who's supplementing them and why don't they care? And again, all you have to do is supplement those at the top. It's the same as the so called environmental groups. And we know that they won't address this issue because our attorneys A geoengineering watch that are contacted everybody, World Wildlife Federation, the Greenpeace, Sierra Club, all of them.

And their attorneys told our attorneys, we're not going to touch that issue because we don't want to lose our 501c3 non profit. How's that for the epitome of hypocrisy? The single most environmentally destructive human activity of all. And they will, they won't talk about it because they don't want to lose their donations.

So that's what we have. And that's, that's what happened with corporate churches right around the world. Yes. Yes. They've let people down. I'm a man of faith and, and my own denomination has marched in lockstep with, with state. And you know, it's clearly evident that state and church much must remain separate.

We're even seeing. Narrative coming out of Rome, which is shocking. A lot of very staunch Catholics at the moment from the Pope. Graham. Thank you for bringing that up because I could not be more with you on that subject. I've spoken to all the major institutional leaders here. Including Bethel, which is a huge institution in our region, all the Christian churches and what their pastors have said to me, without exception, the first thing they say to me when I'm passing them my data, we don't need to worry about that.

It's all in bigger hands. Wait a minute. You show me in scripture where it says you can turn two blind eyes, sit. Behind your pulpit and do nothing or have your congregation sit in a pew and warm it with their backside and do nothing. Scripture says, before you knew your sins were washed away. Now, you know, your sins remain.

They're responsible to respond to this and they are not. Exactly right. And, uh, and we're called on to call out evil wherever we see it. Yes, I guess we've got it. We've got to let you go. We've been on for ages. Um, I really hope we can get you back on. Um, because I'll tell you what, I'm going to be really honest.

I like, I like wearing my heart on my sleeve as long as I don't stick my arm in the toilet. Um, I came into this, before I did this, I prayed for half an hour that I wouldn't allow pride to get in the way, that I wouldn't allow the desire to be right to get into my way, and regardless of all the prayer, it did.

I sit in a room, I wish you could see all of it, but I'm surrounded by my life in aviation. There are photographs and there are awards on the wall and there are models in the background you can see behind me, and everything you've ever spoken about. Since the day you started has challenged everything I believed of myself and also my industry, which I've always been really proud of.

I did come in today with a subconscious desire to smack you a little bit, and I didn't recognize it. I now regret feeling that way because I think my prayers have been answered. I really believe you have. Enlightened me in a way that I hoped you would because for me to even schedule an interview like this was going to lay me open to a whole bunch of flack from my aviation colleagues and from those in the freedom movement who say that I'm an idiot because I'm not covering off on what you do.

I'm between a rock and a hard place. And all I know is that we agree. We do agree. If I can, if I can return the sentiment Graham into you and John and I don't take many interviews anymore. I'm I'm too committed to, to other issues, but I, I watched both of you and with your interview with Kristen, who I also hold in very high regard, Kristen Megan, and I was, I was quite taken by your sincerity.

And John's and I feel very compelled to connect with both of you and that we are definitely on the same team and that we will compare our notes along the way that we are marching in exactly the same battle, and I am honored to march with both of you. Wow. What a great way to bring it up and bring it to a close.

And, uh, I'd ask you to stay on the line after we terminate the recording side of it, just for a second, buddy, and we'll just get this to you. But, uh, John, I think this has been great. I think, uh, I think this has been a great interview. This will go down as one of our better interviews, I'm sure. A hundred percent, Woody.

Look, I know how apprehensive, but also eager for this interview you've been. I mean, you, you, your health has suffered as a result of it. I know that. You've not been in a great place, but I think, uh, out of the back end of this, you, you will be comforted and, uh, I, I think the viewers will, will absolutely love it.

And, uh, thanks Dane for, uh, for, for being part of, uh, Club Grubbery. You, you're a remarkable, uh, uh, person, uh, and, uh, you're obviously, uh, you know, so committed to what you're doing and you're exposing, uh, a lot of the fraud that's going on around the world and good on you for that. Look, the honor is mine team effort at the end of the day, Dan, what you're talking about is protecting the Earth's immune system and John and I have been fighting to protect our bodily immune system and they're both inextricably linked.

Because body moves in the atmosphere and if the atmosphere is filled with a deadly, deadly tank, we're all in for it. We have a job to do. So, um, let's call on our higher power, my higher power, at least to bring this to a close. Do you mind if we pray? Absolutely. Please do. Dear Lord, father in heaven in seeking truth, because you said in John 8 32, know the truth and the truth will set you free.

Father, we just pray that the truth will set us free. Not only in an internal situation, but also in a day by day situation, Lord, help us to realize that every day, the sun comes up and every night the sun goes down and hopefully they won't change that at least. And we pray Lord, that we will get the strength and courage to stay with the flag that we planted on our respective hills.

Lord, we ask you to bless Dane and his organization. He has stood in his truth for 20 years and his truth is universal. There are dark forces at play to destroy everything we know and love about the beautiful place you've given us to live. So father, strengthen us, strengthen him and strengthen us together because we really do stand in the same trench and we're fixing the same bayonet.

So father, we ask that you'd be with all of those anxious people out there who are really feeling depressed. And I'm set. That you help them to realize that their, their relationships are important. What they did yesterday got them to today. And what they do today will get them to tomorrow. So let's stay real.

Let's stay close to one another. Let's love and support one another and stop tearing each other down. Let's get off the notion that we need to be right. And adopt the notion that we need to be real. So father, we thank you for this opportunity. We thank you for Dane. We ask you to protect him and his family and his movement as he moves forward and ours as well.

In Jesus holy name we pray. Amen. Thank you. You've often been heard to say Johnny Larder. You just couldn't make this stuff up. You couldn't make this stuff up. Stay out of the trees, everybody, while we've still got some. Um, stay out of the trees and we'll be back on Club Grubbery very soon. Dane, please hang on for a moment and God bless you all.

And please share this far and wide. I know we're going to send this to Dane for his organisation to share it as well. God bless you and bye for now.
