

Raw transcript of interview:

Graham and John speak with Steve Kirsch...

Publish

January 26, 2024 7:00 pm AEST

Well, hi everyone. And in Australia at this time, it's the 24th of January and it's a big day because around Australia at the moment, Australians are meeting in small and large groups in protest for two for one, and, um, it's a very big day and we hope you're all enjoying that day. As much as we're about to, because we have a very special guest today, John, from the USA, Steve Kirsch.

Welcome to the program, Steve. Thanks, Graham. It's good to be here. Heard a lot about you. Oh, good on you. I hope it's, uh, yeah, anyway, we won't go there, but it's great to have you on. And, uh, there's so much we can discuss, but a little bit of background from you. Uh, I'd like to get before we get right into it, but we know that you're an entrepreneur.

You've been a very successful businessman. You're right over the data and you've done a lot of work lately, and especially on a pandemic and the so called vaccines. You've done a lot of research and you've been out there and I believe you are the most heavily fact checked person on the planet. Is that right?

Uh, you know, there's probably not a fact check on that, but I wouldn't be surprised if I was. Yeah, well, we're getting used to that too. So it's great to have you on. So as we get into it, can you unpack a little bit of your story pre this madness? And what got you inspired to get involved in it to the depth that you're in?

Uh, sure. I, I was a high tech entrepreneur working at, uh, my, I think it's 7th or 8th startup company. And we were shut down, uh, with COVID. Uh, I ended up funding a COVID 19 early treatment fund. Uh, I was featured on 60 Minutes. I ended up, uh, being convinced to take the job because they said this was new technology and that's how they could develop it so fast and it's really cool and safe technology and it's the safest technology ever deployed and everybody should get one just as an extra precaution against COVID.

And at the time, even though I had some doubts about the FDA, I still trusted them on, uh, drug approval. I took two of the shots. And shortly thereafter, I started hearing horror stories from my friends, people who were either disabled or dead, uh, from these vaccines. And so I then started looking into it, and there was just no question that the vaccines were killing people.

So, I spent about two weeks, uh, doing research and, um, Uh, just to make sure, and I wrote up about 150 page article for trial site news. It was published on on May 25th of 2021, and it basically outlined the case against Tony Fauci said he was corrupt, said these vaccines were dangerous, and I thought in a couple of weeks, it would all be over and people would realize I was right.

And to my surprise, People didn't believe me. They thought I was a nutcase. My scientific advisory board from the COVID 19 early treatment fund all resigned. They said I was a danger to society. They didn't want to associate with me. And they, um, I asked them, well, I thought I got it right. And if there's a mistake, could you tell me where I made the mistake?

And they said, No, I know we don't want to talk to you at all. You're a danger to society, and we don't want to talk to you. So ever since then, nobody's been willing to work with me to point out my mistakes. I have never been able to since that day. There's, and since I started this, nobody has been willing to come on camera with me to explain how I got anything wrong.

And you've offered a million dollar reward for anyone who can, am I right? Uh, I, I, yeah, I, I made a million dollar offers to people on the FDA outside committees to come on camera with me for four hours. And if there were two people, they'd split the million. If there were four people, they'd get 250, 000 each, and they wouldn't do it.

Now, at that point, you know, you know, you're on the right side of the issue, and they're on the wrong side, because, look, who would turn down a million dollars for a four hour conversation? You know, who in their right mind, with nothing to hide, would turn down a million dollars for four hours? I will talk to you for four hours for a million dollars, no problem at all.

You would? We would. See? We're on the same side. Even, even John would talk to me. I mean, John would probably, if I offered John 25, 000 for, to talk to me for four hours, he'd probably take it. Right, John? 100 percent I would, especially now. So, I made this ridiculously high offer to show. How corrupt these people are that they would turn down a million dollars.

I mean, look, I mean, you don't have to have much common sense to figure this out. You know, I mean, I did the million dollars to make it obvious to anyone with a working brain, which seems to there. It seems to be in short supply nowadays, but. Anyone with a working brain should figure out that if these guys are not willing to talk to me for four hours for a million bucks, there's something seriously wrong here.

Somebody's afraid, somebody's very camera shy, and it's not me. And, uh, you can't say it's Fauci either because he spent most of his, uh, most of his early career in this pandemic, uh, on the screens every day, telling people safe and effective go and get it. You won't, if you get it, you won't get sick. You won't get COVID.

You won't die. You won't go to hospital. Uh, Johnny Lada. Yeah, Steve, the, the Pfizer trial, was there anything that was identifiable? Were there any risks? Was there any safety profiles that should have alerted the regulators early on? Absolutely. They faked the data. We have multiple whistleblowers that tried to talk to the Department of Justice in the United States saying that they fabricated the data in the trial.

The Department of Justice wouldn't talk to the whistleblowers. What does that tell you? Absolutely. Now, the other thing that's very obvious to anybody, again, with a working brain, is Maddie DeGarry. And she's just one of the cases. But Maddie's, uh, was a 12 year old girl, got the shot, a perfectly fine 12 year old girl.

Less than 24 hours after the shot, she couldn't walk.

And she has never recovered. Now I called up Janet Woodcock about it. Janet Woodcock was the acting head, acting commissioner of the FDA. Janet said, we'll investigate this. Thank you for bringing this to our attention. We'll investigate it to this day, that family has never received a phone call from the FDA or the CDC.

And that, you know, his mother is devastated. Isn't she? She can't believe you'll never forgive horrible. Yeah, it's absolutely horrible. What they did to Maddie. And this is a, there were a thousand kids in the trial. One of them is paralyzed for life. Now that should be a stopping condition. She was reported in the trial as mild abdominal pain.

So there's clearly fraud going on in the trial. These people don't want to look at it. And you know, Tony Fauci, who happily answers questions on CNN when he knows what the questions are, is never going to come and answer any of my questions.

That's not gonna happen. So yeah, there's the data that doesn't match reality. Come on. You look at the data and it shows that, well, you know, there were fewer adverse reactions for the Pfizer vaccine than for the placebo. Come on, we know from the V safe data that 8 percent of the people sought medical care after getting the vaccine that now that's like COVID 19.

If the vaccine is as safe as a placebo, then that means that every time you brush your teeth, like the every, um, if, if it's, if it's, um, uh, 8%, that means one in every 12 times you brush your teeth, you have to go to the doctor because of the, your toothbrush. You seek medical attention, you know, every 12 times you brush your teeth.

Because that's what's happening with these COVID vaccines. These COVID vaccines are no way, they are safe. Absolutely no way. I have a friend who in his entire life, he's, he's like, I don't know, he's in his 40s. Um, and in his entire life, he's, he's known only one person who died unexpectedly, his entire life.

Since the COVID vaccines rolled out, he's, he, he's known 14. And of the 14, four of these people died on the same day that they got the vaccine. And three of them are under 30. Now, come on, you know, if you think this is a safe vaccine, you've got to be kidding me. We just did a, an episode of VSRF. It's our most popular episode ever.

It had 16 nurses. On the episode and people love nurses because they're the most trustable people in the world. There was a survey that was just done. Nurses ranked at the very top and Congress is at the very at, I guess, at the very bottom. Yeah. So, um, so these nurses come on and they basically say, Hey, look, you know, 90 percent of the deaths from COVID were due to the hospitalization protocols, not to the disease, to the hospitalization protocols.

And then on top of that, is the other equivalent number of people who are killed by the vaccines. So we have this disaster of, of gigantic proportions, where the, the COVID virus itself is a little bit more dangerous than the flu. And, and if you treat it right, it's like, it's not, it's a nothing. If you treat it wrong, you can magnify the impact by at least, you know, maybe 100 times, uh, what the death toll should be.

I mean, you're probably looking at millions of people versus should have been maybe 30,000 people at tops, you know? So what is that? That's a factor of, um, 30. 30 times, it was 30 times more, uh, deadly than it needed to be. It's because it was so mishandled by the authorities. And what we did, what the government's did is they listened to all the people that they should have censored and they censored all the people that they should have listened to.

They just got it completely wrong. And everybody would have been served well by listening to the, everything, what the CDC said and doing the opposite. I mean, that would have been perfect. They say, wear a mask, don't wear a mask. They said. Six foot distancing, which they made up out of thin air, even Fowchee.

Fowchee admits that they made that up out of thin air. But there are places, there's, North Carolina wants to have businesses enforce social distancing, even though there's no science behind it, and Fowchee admitted there was no science behind it. Just like masks. You know, one day, masks never worked for treating a virus, and the next day, bam, it's like, yeah, you can mask and double mask, works great, like, there's no science behind this, there was no study that suddenly came out where masks suddenly worked against the virus, it's so ridiculous, I mean, the whole thing is preposterous, and so I'm, I'm, I'm, you know, wealthy enough that I could quit my job on this and, And, uh, and so I transitioned to a journalist because I just thought it, you know, it was important for people to understand the story.

So, um, I started up, uh, and on Twitter, they got, I got banned on Twitter. So I started a sub stack and got replatformed on Twitter. I got, uh, you know, somewhere around a million followers between Twitter and sub stack and my other platforms. So, um, I can't go on Facebook anymore. If I, if I post on Facebook, I'll get banned for life.

Well, we'll probably get banned when we put this interview up and you've really reached the high note now, mate, being on this program, so, um, it's a real feather in your cap getting on to Club Grubbery, I can assure you, but, um, that's the, uh, we had, uh, uh, Kristen Megan and Tammy Clark on the program from the U.

S. who, um, You know, between the two of them are pretty much brought down mask mandates because they did the science, they knew the science, and they said that masks were ridiculous in this situation. And, and they were proven right. They had all the science to back it up. And still in Australia, we've got, uh, we've got a chief medical officer in the state of New South Wales, Kerry Chant, who's one of John's favorite people, is now telling people to go out and mask up if you go shopping.

I mean, it's just bizarre, but Rock me. Yeah, you know, I, there's this classic video. I don't know if you guys have seen this, there's this classic video on masking. It's done by these two Marines. It, have you seen this? On, it's on YouTube. Go, go, look for, um, uh, Marie, uh, here, let me, let me see if I can find it here while we're, um, Uh, uh, and here, lemme go to YouTube.

Uh, so they use Bear spray, uh, Marine Bear Spray. Yeah. You said Marine Bear Spray video. Um, it's there. It's uh, uh, and I don't know how to pronounce this. Salme uh, valley Marines test testing, mass with Bear Spray. And this is, it's 11 minute video. It, it is. here. Sorry. Um, it's a classic video. Um, so, uh, Marines testing mass with bear spray.

Everybody should watch this video. It is hilarious. They basically they have this tent and They go in with the military grade gas mask. They spray the bear spray. Nothing happens. And bear spray, by the way, is way bigger than the virus. Okay. So nothing happens. They got the mask. They put on the N95. Spray the bear spray.

And it's like, get me out of here. It's it's hilarious. This is how much protection these 95 mass offer. It's like visual proof. Like you need to get these guys on camera doing this. I would pay to see that, you know, and meanwhile, they're telling you Oh, yeah. Yeah. It's going to protect against the virus, right?

Yeah, we'll put the, yeah. Oh, oh, and you can take, you can, you can catch the virus through your eyes. What are you doing? You're masking up. You got to cover your eyes. You gotta like, you know, put goggles on. Yeah, really? You know, if you're gonna stop this, it's like, it's like saying that, well, we closed the front door, but we let the windows open.

It's, it's, I mean, these people are insane and I can't get them on camera to expose them because they won't talk to me. Yeah. Well, look, you know, it's, it's easy to say we'll put the, we'll put the link into the chat for that, um, that Marines with bear spray. But I want to touch on, on the way that. The administration treated ivermectin now, clearly Fauci did a job on that.

They had all the mainstream media saying it was a horse dewormer, a horse drug, one of the most successful and cheapest to produce drugs in the world. Peter McCullough, Zeb Zelenko, all these guys proved that they were keeping people out of hospital with it. What's your take on that? You know, there's never been a study that has had that many.

Peer papers published in the peer reviewed literature that shows that the thing works there has never in Medical history have you seen like 50 studies showing it works and then they find out later. It doesn't work never happened I mean it and ivermectin has multiple they're called Meta analysis and and systematic reviews and they're multiple.

This is the highest level of evidence In evidence based medicine. This is playing by their own rules. Highest level of evidence. They got two of them. What happens? They get ignored. It's, it's insane. So they're not playing by their own rules. They're, they're, they basically say at the top of the evidence based medicine is these meta analysis, uh, it's systematic reviews.

At the bottom is expert opinion. So what do they do? They make expert opinion to be everybody follow what the experts say and ignore the peer reviewed literature. So that's what they do because the NIH says this is the way it is folks. And it's like the NIH is the, are the the people who said, oh, treat people with REMS severe.

And if they don't respond, then put them on a ventilator. I mean, this has killed 90%. Of the people from Colvin who died from Colvin died because of these stupid protocols and people in the hospital say, yeah, yeah, we got to follow the protocol that we're gonna be fired. But the protocols kill people, you know, Paul Merrick, um, one of the top, um, intensivists, meaning he's ICU doctor.

Yeah, in the world at Paul Merrick was saving 90. He was, he was getting patients late. He's getting patients in the ICU and he would save 95 percent of the patients who came into the ICU with COVID. They made him switch over to the NIH protocol because if you did the NIH protocol. Then you got money from the government.

And if you didn't, you did, you didn't get the money. You probably get decertified, whatever. So everybody's saying you've got to follow the NIH protocols. So Merrick followed the NIH protocols for his next seven patients. All of them died, including a pretty young kid. And he said to hell with this. And he went to management.

He said, I'm not going to do this anymore. And so he's basically forced to resign because he couldn't treat patients the way he wanted to treat patients. So he resigned, did the right thing. Hats off to him. He's Pierre Khoury's mentor. Yeah, yeah. Paul Merrick's a great guy. You know, and Paul, I talked to, I interviewed Paul.

I said, you know, when did you figure this out? He said, well, it was kind of the COVID thing that woke me up. He said, I had no idea how corrupt the system was. Until COVID came and now it's like he used to trust what was in the peer reviewed literature now He doesn't trust it at all. So he's taking Paul Merrick has taken a 180 and Paul Merrick is not a conspiracy theorist He's not a you know, somebody who doesn't know what he's talking about.

He's one of the most published guys Uh, in his field in the world, he said, basically, they pulled the, you know, I, he said, I drank the Kool Aid and COVID woke me up. And this is happening to a lot of doctors who can afford Um, to essentially lose their job like what all did a lot of people can't. And so they just kind of look the other way and they say, well, maybe there must be some science behind it, but I'm not going to look into it.

Cause they don't want to, I'm afraid to, uh, to see, to see what might be there, but these guys don't like to look at the evidence. These doctors basically follow orders from authority. They, they don't know how to evaluate data properly. I mean, I posted the New Zealand data and I deliberately kind of underplayed the analysis just to see.

if there are any smart people out there. And I found like, that basically we're on the other side that, that would then, you know, analyze this and then figure out that I got it right. And there is not a single person who properly analyzed that data on the other side. And, and when I, when I show them my analysis, I say, so what's wrong with this analysis?

One guy says, it's this, and one guy says, it's this one guy says, it's this one. It can't be all those things. There's the, uh, um, uh, Occam's razor. basically says, look, you know, if there's something wrong with your analysis, it's one thing. You, you screw it up. You, you, you had a sign error. You, you, you, you messed up the multiplication or you had a wrong reference in the spreadsheet or something like that.

And, you know, there's usually one error that Pops up. These people are like making this stuff up. Like I heard a doozy today on, uh, it's because the vaccination save lives. And that's why the death rates were going up because that wore off. It's like, yeah, where's the evidence on that one? And another person said, Oh, it's because of cold.

It was killing these people. Wait a second here. There were the guys who got vaccinated. How is COVID killing them at a higher rate than the people who didn't get the facts? So the, yeah, the, you know, these arguments make no sense. And, and so I'm attacked with, and these people are epidemiologists who claim that I don't know what I'm talking about and they won't go on camera with me because they're afraid of being embarrassed.

It's so silly. I've been studying this data for months. You know, so I've got I know where all the graphs are. I know where all the bodies are buried. I know all the numbers. And nobody wants to challenge me. That New Zealand data, that's really important, isn't it? And I think it cements what you were saying earlier, I mean, you spoke about four people that you knew died, uh, one day vaccinated and the one day here, we see that in New Zealand.

Yeah, so, you know, the New Zealand data, um, actually is nice because it, uh, corroborates the, uh, Medicare data. And I don't have the record level data, uh, from Medicare, because I don't have a good enough source on that. But I do have the record level data from Barry Young in New Zealand. And that was really nice because it matched, it matched the Medicare data.

The same signal in the Medicare data is in the New Zealand data. It's unambiguous. But anyone who challenges me doesn't want to go on camera with me to challenge me about it. I tried to get these guys at, uh, New Zealand, uh, Health New Zealand. Hey, let me just talk to one of your epidemiologists. Let's have a conversation.

If I'm wrong, you know, I'll admit it. Uh, nah, we're not going to do that. They just ignored it. And all the epidemiologists say that, oh yeah, we've analyzed the New Zealand data and there's nothing there. I said, hey, let's talk, let's chat about it. No, we don't want to chat with you.

People are afraid of the truth. I represent truth. Yeah. People don't like to talk to me about it. That's a dying commodity, as you know. But I mean, I'm ex aviation, and looking at the stats in aviation is just frightening. Oh, yeah. A lot of my ex colleagues who took Who took the, uh, took the government's advice and followed through to keep their jobs.

A lot of them aren't well. There's a lot of long term sick leave. We've seen a four, almost 400 percent increase in Mayday calls and SCORC 7 700 calls, uh, around the world in aviation, which means aircraft in distress. We've had pilots dying at the controls. The US military have admitted through their data that they have a 1000 percent increase in military pilots of cardiac arrest.

I mean, and yet nobody's, nobody's analyzing it and to say, what's going on here? We know what's going on. They know what's going on. You know, I have a military doctor who says she's never seen anything like this. She has super healthy people who get the vaccine and now they have heart problems. And she says, this is like disabling.

These people, she works in the, uh, the air force. Um, and so this is just disabling pilots, which is really, really expensive. And it's really hurting our readiness, but, and she reports it to our commanders and her commanders don't give a crap. They just say, make sure everybody's vaccinated, you know, it's not, you know, and they get the exemptions, but the troops don't, it is insane.

And nobody wants to talk about it, and nobody wants to talk about it on camera. You know, there's no doubt that these things are, are really hurting young people, especially athletes. You know, I was watching this video last night about these, all these athletes that are dropping dead. I mean, um, and, uh, Uh, the this guy is talking about.

Hey, he talked to his friend and his friend was telling him. Well, you know, it's actually always happened. It's just that people are noticing it more. And and the guy said to him, Hey, look, you and I played sports in our younger days. Was there ever a time when you had somebody dropping from a heart attack while we were playing?

Well, you know, in the 10 years or 20 years that we were, you know, doing, uh, uh, football, this is in, uh, England, uh, uh, footballers association in, in, uh, in the uk. And, um, the guy says, well, there was this guy. And, and he said, and the guy said, no, no, no. That guy happened. After our time, I'm asking you, during our time when we were on the field, did you ever see this happen?

And he said, no, I can't think of an incident. He said, yep, that's right. Because, because he's noticing that I've never seen so many athletes dropping on the field. And so it's, it's not that he's noticing it more. It's he's noticing it more because it's happening more. There's no doubt about it. You know, so all of this stuff is just happening in plain sight and people are just ignoring it and looking the other way.

And, and it's really, really disgusting what's going on here. The brainwashing here is unbelievable. I mean, if you were to put this in a movie and, and tried to make people believe that this could happen, they would say, that's, that's a fantasy. People couldn't be brainwashed like this, but they are because they trust the doctors.

The doctors were told that it's safe and effective because of the clinical trials. Well, the clinical trials were rigged. And so So it looks safe and effective so the doctors are convinced it's safe and effective And so all of these doctors are seeing all these adverse events, but they are assuming that it's only happening to them They're assuming that oh, it's just me.

It's just i'm unlucky I don't want to poison the well just because i'm unlucky, but the fact is it's happening everywhere But the doctors aren't allowed to speak out about it Because they're going to get fired, so they just think it's just happening to them. And so, it's like this willful blindness that happens and the doctors say, Wow, you know, like, I had this one doctor He got the shot and, um, and he had a, um, uh, um, uh, um, uh, trying to remember whether he had this thing where he had to have an operation on his heart.

And so he had an operational heart. He, he, it cleared it. And then they said, okay, you should get your second shot now. So you got the second shot. It came back, had to have another operation again. And his son died. After he got the Vax. After his son is like, you know, was in his 20s. He supports the Vax today because he just thinks it just happened to him and nobody else.

And this guy is a, is a chief medical officer or was a chief medical officer, man. We had, that's how bad it is. We had British son got killed by the VACs and he thinks it's safe because he just thinks that he was unlucky. We had British oncologist, uh, and Professor Angus Dalgleish on our program. And you've no doubt spoken to him or heard of him.

He's, he's just churning out this data saying that turbo cancers are on the rise because of mRNA. There's no doubt about it. And he describes it beautifully by saying what this, what this so called vaccine does is send all the troops in your immune system to fight a battle on the Western Wall while the enemy's attacking on the Eastern Wall.

And so he said cancer is, cancer deaths are going through the roof. They've never seen anything like it. I mean, the ripples in this pond, Steve, are going to go on and on, aren't they? Oh, yeah. Yeah. By the way, the condition, I just looked it up. It was AFib. AFib, yeah. Atrial fibrillation happened right after he got the vax.

They had surgery to repair it. He got the next vax. Afib came back. I mean, come on, like, you know, how could you not? You know, he was one of the first people to get it too. They didn't stop the vaccine for this. I have a nurse friend who got the vaccine. She was disabled, um, from the vaccine. My carpet cleaner got the vaccine.

He had a heart attack within two minutes after he got the shot. He spent the night in the hospital. The guy has never been the same since. He's a young guy. Perfectly healthy before the shot. Right? This affects me. 'cause it affects me personally. I mean, it's, it's someone I know. Another guy I know. P Paul Lagasse.

I was, uh, we were roommates, uh, with him, uh, at, at MIT, uh, when I was a student there. He became an MIT professor, highly regarded. Um, swimming in his pool, drops dead six months after he gets the vxx. Very typical. Very typical. A lot of people die swimming. Obviously people don't, they don't even want to think about it because Yeah, couldn't even talk to his wife about it.

Well, I think long COVID, uh, is another reason that they're, they're, they're masking this up. Uh, a lot of people obviously think that their, uh, adverse reactions, their, uh, shingles, all these side effects that they're getting are actually a by product or, or leftover from, from COVID. Uh, Yeah. But it's only happening to vaccinated people.

That's the problem. Yeah. You know, if you look at the ICUs today. Okay. It's failed. It's basically 100 percent vaccinated people. Okay. In the United States of America, and only 75 percent of the people are vaccinated. So you tell me, how could, how could it be that 100 percent of the people in the ICU are vaccinated?

And you know how I know this? I know this because I know an ICU. She's, she's a level three nurse, which is very rare. And so she, she's been asking, she's been looking at the charts, the charts say, unvaccinated. She'll say, yes. Hey, have you been vaccinated? Yes. So she finds out the truth that the medical record system show these people are unvaccinated.

They're not unvaccinated. It's because they don't put it in the chart. So she asked these people and then she, she puts it in the medical record and people are pissed. At the hospital about that. She's doing that, you know, what the heck? Dr. Pierre Corey actually explained that to us. He said that, uh, these people are underrepresented in the ICUs because of that fact.

It's not, it's not linked. There's no recording. See, in Australia, your vaccination status is carried through on your medical records through a computer system, but it's not in the US. It's a, it's a voluntary admission when you, when you're, uh, when you enter the hospital. And in fact, the data, uh, from 2022 from New South Wales Health, uh, reveals exactly what Steve has just said.

That the, in the two week period, uh, ending, uh, December, 2022, uh, there was 58 people in New South Wales Health Intensive Cares that had, uh, four or more doses, 58. There was zero people in hospital that were unvaccinated, zero. And here's the thing, because the government is, the government is saying that if you If you haven't kept up to date with your shots, then you're unvaccinated.

So 85 percent of the people who got two jabs in Australia, uh, Steve, have refused to get any boosters. 85%. So there's a lot of people smelling a rat in the cheese factory. Are you finding that in America as well? Is that happening in the States? Yeah, yeah, yeah. The adoption. On these booster shots is very low and we have the data from Medicare from I don't know it's like 12, 000 different nursing homes reporting in and I can show you a chart of the number of COVID cases and the number of COVID deaths.

And they track cases and deaths, cases and deaths that track, you cannot find, if you were looked at that chart, you would be unable to figure out when they rolled out the vaccines. Now, if the vaccines worked, you'd be able to see it in the chart. I'd be able to show you the chart and leave the dates out and say, when in this chart did they roll out the vaccine?

And nobody would be able to answer that question. That means the vaccines don't work. Now, we also know that the vaccines don't work. Because there was a paper that's published in JAMA, and it was, I think it was, uh, let me, let me, let me pull it up real quick. Here, should I, should I screen share it with you?

Yeah, go ahead. All right, here, um, let's go and, uh, screen share, where's the screen share? You invented the optical mass, right? There we go. There we go. Navigate around this. All right. All right. Let me see. This is the first for Club Grubbery having someone that knows what they're doing on a computer. Yeah.

I'm trying to find the right, I got so many windows open on, uh, here we go. Let's see. Here's, here's my zoom window here. I'll share this zoom window here. So let's go, um, to my sub stack here. And, uh, let's see, uh, so, you search for JAMA, uh, VA, uh, major, whoops, VA, uh, here it, okay, so this is, this is the study.

April 6th, 2023, it's a research letter, it's published in JAMA, top research journal. Uh, risk of death in patients hospitalized for COVID 19 versus seasonal flu. Innocent enough. And it says that, hey, if you're hospitalized for COVID, Uh, that you have a greater chance of dying, but you see, I looked at something else, which was in this paper and, um, this is, this is the, this is the key thing in the paper, this chart right here.

Okay, let me see if, can I blow it up, uh, uh, whoops, uh, sorry about that. I can minus it, but I can't, uh, ah, crap. Let's see. All right, well, hopefully you can see this, but this is the, before, this is the raw numbers. This is, uh, for FLU. This is the breakdown. 18%, not vaccinated, 4%, 21%. This is, uh, for the, for the covid vaccine and for the flu vaccine.

Okay. 61%, uh, vaccinated. Okay. And here it is for Covid. 63% vaccinated. 54. 54. Okay. Wait a second. Now wait a second. You have hospitalized for covid. 54% got the vax You hospitalized for flu? 54% Got the flu. Now, there's a big problem here, okay? If the COVID vaccine worked, then anybody, then these numbers here for the COVID vaccine would be really low as compared to these numbers.

And if the flu vaccine worked, then these numbers would be really low compared to the number here. But they're not! They're the same! And because they're the same! It means that neither vaccine does anything to protect against hospitalization. And guess what? There are no examples in medicine of something which has no hospitalization benefit and has a death benefit.

In the entire history of medicine, there is no example of a drug which has no hospitalization benefit which then does have a death benefit. The flu vaccine and the COVID vaccine have no hospitalization benefit. It's revealed here. And we know it's revealed because it's honest, because this guy wasn't thinking when he published this.

He didn't realize he was exposing the fact that these vaccines don't work. This guy works at the VA. He made a big mistake he didn't realize he accidentally showed. That neither vaccine worked and I showed this to doctors and the doctors at first are skeptical and then they look at it and they say, Oh, you're right.

There's no way you can explain that. And so I wrote an email to the author of the paper and the author of the paper is a really smart guy. I mean, he's, he works at the VA. Um, he's got an H index. That's, that's really high, you know, very respectable guy. And I said, look, you know, this thing proves that both vaccines don't work.

And he says, well, you know, we didn't really study that because we didn't really have a control group and study that specifically. I said, yeah, there's no way to explain this. And so he couldn't answer that. And I said, why don't you write this up as a note to, I mean, this is a significant, it shows that the COVID vaccines don't work and the flu vaccines don't work.

This is, it's pretty significant. He says, Um, I don't have time to do that. You can't make this stuff up. I mean, you really can't. I mean, this is this is just this shows you how corrupt that the system is, you know, I mean, all of this stuff. I would love to get somebody on camera to talk about it. Hey, if you can explain this, like, I'd love to know it.

I've written. I think I've written. Um, it's like it's, uh, it's over 1000 articles on, um, On, uh, on sub stack. Let me let me just go into my dashboard. It'll tell it. It now tells me and, um, uh, let's see. Yeah, I published 1377 articles, and I have 142 drafts that I haven't published yet. So I published almost 1400 articles, um, on my sub stack.

I can't get a debate with anybody on any of those articles. to challenge any of those articles or what I wrote. Well, there's your answer there. There's your answer straight up. You don't need a debate. They've just proven your point by not responding to you. You know, they say, Oh, this stuff isn't debated in, in debates.

This is, uh, we, we do science in the literature. Yeah, right. Yeah, right. So tell me, how's that, how's that worked out for you for autism? Like, do vaccines cause autism? Of course vaccines cause autism. Does the medical literature admit that vaccines cause autism? No. There are thousands of papers saying that it causes autism and thousands of papers saying it doesn't.

The medical literature doesn't, doesn't decide anything. The only way we're going to get to a resolution is if we have a dialogue between the parties. And one side realizes that, oh, they got it wrong. But you see, we can't have a discussion because the people who believe that vaccines don't cause autism don't believe in debates.

They say, let's do it in the literature. Well, come on. It's been over 20 years that this has been going on in the literature and there was no resolution. So these people are saying, Oh, well, let's, let's keep doing the same thing over and over again and expect a different result, which is, of course, the, you know, definition of insanity, which is what these, you know, I mean, it's, it's so silly.

A whistleblower is so clear than the data is so clear on autism being caused by vaccines. I mean, there's, there's a clinic that doesn't vaccinate kids at all. Zero autism. If autism was caused by something else, how could these guys get zero? When they, when all that they did is they don't vaccinate kids.

Yeah. Well, it definitely needs to be looked at. I know in my 25 years, uh, as a paramedic, uh, when you think of sudden infant death syndrome, uh, and the amount of babies that were, uh, unfortunately lost, uh, due to that phenomenon, it's likely, uh, due to vaccines. And yeah, well, most of them happen right after they got the shot.

There's like the, it's like 50 percent of these things happen within like 48 hours of the shot. And I, I have a police officer who said that she has the records on this. And so I tried to FOIA the records and the police department and the police department stopped talking to me. They don't want anyone to know that they're, they're, they're killing the kids with these vaccines.

She's been really vocal. Hasn't she? She's a detective somewhere in the States. Um, yeah, there's a. Uh, there's one in the States. There's also one in Canada. Yeah. Steve, there was a whistleblower, uh, recently came out. I think they were from Pfizer, uh, leveling, uh, this at the Department of Defense. What do you make of that?

Do you think that these, uh, companies really did just, uh, have good intentions and botched this vaccine up or is it, is it, uh, worse than that? I think it's a, uh, it's kind of one of these perfect storms where everything went wrong. I think they were, the Department of Defense probably funded the gain of function research or, you know, helped to instigate the gain of function research to use as a biological weapon or as a defense, uh, for biological weapons.

And so they were doing the research to, I don't know, either to protect the public or as a, um, offensive, uh, uh, weapon, who knows, but the, there's, there's, uh, there's certainly evidence of DOD involvement in this. And. It's everybody's. Everybody's got their hand in the cookie jar on this one, right? And then the drug companies.

I don't think Pfizer or Moderna, uh, were, um, you know, deliberately trying to create a vaccine, which killed people. I really don't. I think they tried to make a lot of money because they were given this task of trying to make a vaccine to save people. But hey, they cut. They cut a lot of corners. They cut a lot of corners in bringing this to market.

And people within Moderna were, like, shocked about the corner cutting that was made. And, um, you know, it's one of the reasons why we have these DNA contamination things in the, in these, um, in these files. It's because, like, hey, we brought it to market quickly, and, uh, you know, that was the goal, that was the job.

And, oh, why is it still in there? It's probably because we used an off the shelf thing that we already had in the lab for lab purposes. And so you got the one that we happen to have available at the shelf rather than something custom for designed to be injected into human beings. And so corners were cut, but I don't think that they Deliberately planned to put in a time bomb, which would kill people over the next two years after they got shot or, or that would sterilize them so that they couldn't have kids.

I think those were, were accidents that they didn't intend to happen, but they have to cover it up because if anybody found out. They'd be out of business, so their duty is not to their, to the public, to protect the public. Their duty is to their shareholders to make money. So this is why I can't get a debate with anyone from Moderna or Pfizer to have them defend their product on camera.

Because that's a losing proposition because they'd lose the debate. So there will be no discussions. So you're supposed to believe the FDA and the CDC, and the CDC is so corrupt that when 770 safety signals triggered in the VAERS system. You know, the normal number of safety signals triggering in, in the virus system is zero.

And if you got one, that'd be unusual. With the COVID vaccine, they got 770. So what did they do? They said nothing. They didn't say a word to anyone in America. The only re, the only way we found out about these 770

safety signals is someone did a Freedom of Information Act request and discovered that the CDC was sitting on 770 safety signals and said nothing to the public.

about it. That is how corrupt these people are in Australia. The, the therapeutic goods administration is 98 percent funded by a big farmer, 98%, not by taxpayer dollars. It is that Australia has the highest level of big pharma financial participation in its regulatory agencies than any other country in the world.

What could possibly go wrong, right? I can't imagine what could possibly go wrong. That seems like a great system, a great, you know, Fox guarding the hen house type system. Oh yeah. Now, as, as we speak, um, So really serves the public interest. Oh, yeah. Yeah. And by the way, these people aren't accountable to anybody in the public, and there's no transparency, just like there's no transparency.

In New Zealand or anywhere else, like if you tried to get the data that Barry Young leaked in New Zealand, try to get that out of the health department of news of of Australia, uh, that'll be the day. Look, the, why would you need to reveal the, these patient record level data, you know, why would you need to hide them?

Well, you need to hide them because the vaccines are killing people and, and this is proof of that. So they have to keep the records hidden. That's why they keep them hidden. So what happened in New Zealand, Barry Young leaks the data and they go after Barry. Barry's, Barry's exposing the crime. Yeah, it's unbelievable.

As things stand at the moment, while we've been recording, uh, we've, I've just found out that, uh, Donald Trump's just won New Hampshire, uh, in the pre selection, and, uh, Nikki Haley was set to win that. That was, that was her, uh, safe, uh, state if you like. And he's obviously blitzed that. Um, a lot of people are looking at the States at the moment for obvious reasons, because you know, that the spotlights on America, it's on the Middle East, it's on Ukraine.

There's a whole lot of stuff going on, but what's going on in America terrifies me more than anything, because, um, America is on the brink and, and most people sitting outside it can see it. I'm sure you can see it. If there is a Trump victory in 2024, what will that do? For this argument that we've been talking about for the last 45 minutes.

It's a good question. You know, a lot of Trump's supporters, uh, totally realized the vaccines have caused harm. And Trump has not admitted it. He won't touch the vaccine issue with a 10 foot pole. Trump will admit, will never admit he made a mistake on anything. So, I'm not, if Trump gets elected, I'm not optimistic that anything will happen.

I think the vaccines will still be made available for people who want them. I don't think Trump will mandate the vaccines, but I don't think he will stop them because he didn't do anything to stop Tony Fauci. And he promised Americans, oh, you'll have this wonderful healthcare when I'm president. He's president for four years, where's the wonderful healthcare?

So this guy is really good on promises and he's really short on delivery. And he did nothing. He did nothing to drain the swamp as far as what the FDA has done or the CDC has done. He did nothing. Zero. How do you see, uh, the, the state of play in the U. S. if, uh, if Trump is defeated? Well, if he's defeated by Bobby Kennedy and Bobby Kennedy is the next president of the United States, that'll change everything.

Do you think that's likely? Um, I, I hope it is. Anything is possible, you know, especially, especially if we can destroy the narrative and show that, oh, Trump, he was the one who created this thing, right? And Biden was the one who pushed it and Kennedy is the one who wants to stop it. And when people realize that they've lost loved ones because of this corruption, and it's because of the ineptitude of Trump.

And Biden, and I think, uh, Bobby Kennedy has a chance. How close is America to civil war?

Um, I'm not sensing that we're, uh, anywhere close to a civil war. But I could be wrong. And, uh, I haven't studied, I haven't studied that. Just, that's just my uninformed opinion. And I admit I could be wrong and could be persuaded otherwise. We all watch with, uh, with great anticipation because, uh, boy, it's going to be a very interesting year on so many fronts, Johnny.

If the public out there can do one thing, Steve, what would you recommend that they do to, uh, to try and change the narrative? What, what's, what's one thing that they can do to make a positive difference? The easiest thing that they can do is simply do not get any shots for yourself or for your kids. Stop all vaccines.

These things, you know, the kids who don't get any vaccines are way healthier than the kids who do. And if you've never gotten a vaccine, your risk of heart attack is really low. It's like, it's like near zero. Yeah, so these kids who have never gotten any vaccines, their heart attack risk is like It's like nothing.

Whereas in, in, in America, 50 percent of the people have, have some sort of heart issues, high blood pressure or whatever. Um, so the older, older adults. So you can make a personal choice to say, I will not get vaccinated. That's the, the single most important thing you could do. And then the next most important thing to do is to educate others.

And, and that's a, that is a tough, slow road to do because people are like. Totally convinced by their doctors, but their doctors are coerced into having their beliefs because if they don't toe the line, they get fired from their jobs. We got a really broken system here. I mean, and this has been going on for a long time.

This is not, you know, it's just that people are waking up to it because they see it with the COVID vaccines, but all these vaccines are super dangerous and the risk benefit isn't there. That's why they hide. All the records. So, you know, if you want to get involved, uh, get a data transparency vote pass, like who should be against data transparency, release the record level data, just like we did in New Zealand, no harm came to anybody.

Nobody's privacy was violated. Why can't they do that in other countries? I proved that you could do it in New Zealand. Not a single person in New Zealand said my records were compromised. Not a single person. Because I weren't. Because they were all obfuscated. We used an algorithm to obfuscate the data.

The data doesn't match any person in New Zealand. Nobody can say that's my record because we changed all the dates randomly, but the analysis is still intact. So you can analyze, oh, what, you know, how, how long after he got his facts, did he die? And you know, all of that stuff is intact. So we made it statistically correct.

But we made it so that it wouldn't violate anyone's privacy. There's no reason in the world they can't do this everywhere in the world. The only reason for not disclosing it is because it would reveal that the governments have been systematically killing people. That's why no government exposes this information.

It's public health data. It should be made public. There's no reason it should be confidential. I just wrote the UK ONS last night. I said, Oh, your arguments make no sense. Here's why. There are a list of a bunch of reasons. Their response was, we don't want to talk about it. But you know, look, you know, at least tell me why you think my reasons are wrong.

And let's have a discussion about it because data transparency is a good thing. They don't want to talk about it. This is the UK. They don't want to talk about data transparency. These people are corrupt. Now that's the Office of National Statistics you're talking about. Yeah! Yeah! They don't want They don't want anyone to know the truth.

I pointed out that, hey look, you know, if you want to know the truth about the vaccines, you track people on a week by week basis, and you see how their mortality goes. What they do is they say, Hey, we got three points. We got three data points. And I'm saying like You know, three data points is not enough.

In New Zealand, I've got hundreds of data points. I can, I can draw a line with hundreds of data points showing exactly which way the line curves with respect to the base, with respect to the public in general. And so I can see if it's deviating in the short term and long term and all this. And you show me three points.

And they said, well, in the first three weeks, that's when all the side effects should happen. I said, really? How do you know that? Like, are you some, like, prophet that you understand? It can predict the future that you have this prognostic ability to say that this vaccine kills people in the first three weeks.

Are you kidding me? And they wrote back. We don't want to talk about it.

You can't make this stuff up. I mean, it's, uh, it's so insane. It is, and it's not getting any better. And, um, you know, we're, we're just going to see more and more data reveal just what's going on. It's interesting to, to anticipate how far they're going to take this cover up because, you know, you might, as you said, Moderna and Pfizer, you know, they rushed it through, dah, dah, dah, dah, dah.

They didn't probably, they didn't deliberately do it to kill people, but they're definitely culpable in the cover up. Because while they're covering it up, people are still getting booster shots. Now that, I don't, I don't care how you, I don't, if, if I was a pilot flying a defective airplane that I knew was going to crash, look at Boeing, the 737, the 737 Max.

Look at how everything was rushed through in that. That whole thing was a debacle because they wanted to try and keep up with Airbus who had a better product and they cut up corners everywhere and, and two major accidents and one major incident lately, uh, with Alaskan Airlines and everything gets grounded.

But something like this happens. Come on! Hey, let's mandate the shots. So is, are there any Lawmakers like in the UK. We had this guy Andrew Bridgen. Yeah, and this guy's great because he can't be bought off. Yep So he holds these these people at the UK on s their their feet to the fire and it's just gonna get worse from from Now on and he's getting a lot more traction in Parliament now, but there's nobody in the u.

s You know, there's there's Ron Johnson in the u. s. But he's not in the Um, he's in the minority party in the Senate is I'll bet you there's not a single person in the Australian legislature that's calling for data transparency. Not one. Am I right? No, you're wrong. They are there. There are, yeah, there are four or five that are really on top of this.

They're amazing guys and, uh, and, and, uh, women. And, uh, you know, we've had them regulars on our show all the time and they have absolutely. They'd be happy to, they'd be happy to talk to Steve. Absolutely. Yeah, but put me in touch. They absolutely would. And, and, uh, they've staked their entire career on, on this.

And, um, but the thing is, Steve, um, they're not getting any traction because they're just treated like pariahs, just like Andrew Bridges. Just like Bridgen. But you know, Bridges getting traction now because they can't hide the bodies. The excess deaths in the, in, in the UK are caused by circulatory issues.

There is only one thing that preferentially elevates circula death by circulatory issues. There's only one cause. You can make a list of the pos possible causes, but only one elevates circulatory deaths, and that's the COVID vaccine. And when Bridgen talked to Parliament, nobody in Parliament could come up with an alternate explanation that fits the facts.

These people are gonna so he's going to win in parliament and that's going to have a spillover effect. So Well, at the moment, we're having a Royal Commission or we're planning one and there's been a big drive for information relating to the terms of reference of this hearing. And we're waiting to see what they come out with.

But we're talking about a Labor government over here, which is supporting all of the Labor state governments who, who were the draconian ratbags who brought all this in. And, uh, it's going to be a whitewash. We know

that there's been an extensive lobbying to get the parliament to do the right thing with this, but we know how it's going to go.

We know. Yeah. Why is it that the three countries in the world that most people would want to flock to if anything bad happened used to be New Zealand, Australia and Canada? And look at those countries now, you wouldn't want to go disaster in, in, in New Zealand. There isn't a single legislator, zero. As far as I know in New Zealand, you have, what'd you say three or four, say four, five, John, have we five or six, five.

Six, six in New Zealand, I've asked her zero

think about that one. Oh yeah. Zero. Yeah. That's a disaster. Johnny, you've got a final question. Well, I was just going to ask Steve about the mandates. What what's happening over in the U S because, you know, here in Australia, still in use a while as I'm still mandated out of, uh, working for the government as a paramedic, my wife's an emergency nurse, we both were sacked.

Uh, Because we refuse to get the vaccine and they can't get an ambulance, you know, in a timely fashion, hospitals are overrun. It's the same thing going on in the States. Uh, I think to, to a lesser extent, they've lost a lot of people have left. And there was a, I just read an article about this New York hospital that's basically overwhelmed now.

And it's like, wow, it's not even, we're not even in an emergency situation. You're overwhelmed, huh? Why don't you try vaccinating a few more people and let's see, you know, what that does for the numbers. It's just insane. I mean, it's just like North Carolina wants to pass a bill so that businesses enforce mask mandates and social distancing.

I mean, it's unbelievable.

You know, you can't make this stuff up. I mean, it'll be a while before people wake up. Um, but you know, I'm, I'm doing my darndest to try to make a difference. And so. Well, we three are in that case, cause we're doing a level best to do the same thing. That photo, that picture behind John, you see there was the biggest rally in Australian history.

And we were speaking at that rally and, uh, Australians flocked there in there. Oh, that's awesome. Yeah. In there, hundreds of thousands. And, um, and we just keep turning this stuff out. And there are a lot of people, John is saying, saying, you know, we're getting bored with all this now. It's, um, you know, let's move on.

The COVID thing's just about burned out, but there are still people like you, John, It should be, you should be manning a paramedic ambulance. You should be doing your thing. There are 7, 000 unemployed health workers in the state of Queensland alone when we're desperate for nurses and we're bringing them from overseas.

This is far from over people. And um, and you know, we've got a government now who's planning to bring in a misinformation disinformation bill, which doesn't apply to them. But as we've been saying all along, the only reason conspiracy theories thrive is because governments don't tell the truth. They keep secrets, right?

Yeah. They want to stop. Yeah. If they want to stop the misinformation, all I have to do is stop lying to people, lying to people, tell the truth and start listening to the people that you've been censoring and start censoring the people that you're listening and you will turn the misinformation problem off.

It'll end. Exactly. And have an open dialogue. Have an open dialogue with people you disagree with. Hey, actually, don't be silly because that would make science effective again, wouldn't it? You can't have, you have to have debate to have, to have healthy science. Anyway, that's right. We need to wind this up.

Um, it's been great having you on. We always close with a prayer. A lot of people really enjoy that. So if you don't mind, Steve, we'll do that right now. Lord Father in heaven, we just thank you so much for this opportunity to reach across a vast ocean, to talk to somebody who has common sense, who is.

Putting everything on the line to bring this truth to the, to the four. And we claim the promise of John 80, 8 32, father God, because we want to know the truth, knowing that that truth will set us free and we thank you Lord, that you are that truth. May you stand with Steve and his family and protect them as you do with us.

And for all those in the world and in our country at the moment who are deeply anxious and somewhat perplexed, help them to realize that what they did yesterday got them to today. And we must do this as a day by day proposition. Lord, we thank you for this in Jesus name. Amen. Amen. Johnny Lardy, you've often been heard to say.

You just couldn't make this stuff up. Now see, Steve, you use that, you use that phrase a lot. You must be avidly watching club grubby every night. No, no mind, great mind sink alike, great mind sink alike, great mind sink alike. Stay outta the trees, everybody. And uh, if you love somebody and you haven't told 'em, give them a call and tell 'em you may just save their life.

God bless you. Uh, Steve, thank you so much for coming on and I hope we can do this again. It's been really entertaining. Sure, yeah. Thank, thank you Graham. And thank you John for all the work you're doing in, in Australia. And God bless you too for what you're doing. Thank you so much, Steve. Thank you. Thanks for joining us.
