

Club Grubbery - Raw transcript of interview:

2024-07-03 – Club Grubbery - Graham and John speak with Philip Altman for his perspective of the Spotlight program...

G'day

everyone, Tuesday, the 2nd of July, 2024, Club Grubbery time again. You'll be seeing this on Wednesday, the 3rd of July, because last night we interviewed and put on air, uh, Gigi Foster and that interview is going gangbusters, Johnny Lada, how amazing is Gigi Foster?

Unbelievable. Uh, and especially, uh, under the, uh, under the difficulty that, uh, she would have, uh, faced on that panel, uh, not an easy task, uh, to go up against all those people that are essentially, uh, of, of an alternate viewpoint.

So, uh, being an economist, not, not a medical, uh, professional, once again, you know, everything was stacked against her. Uh, she's a champion of the people, a champion of common sense. And, uh, wonderful, wonderful, uh, effort there on, uh,

Sunday night. Really was a wonderful effort. And she stayed in a line, which was based around the economic and social impacts, which is her charter.

And man, it was amazing. And last night's interview with her is, as I said, going off Philip Altman, another Altman report, we haven't had one of these for about 30 years. Where have you been Phil?

Well, I've been moving house, but so I've, I've been busy, but I've been trying to get my substacks out.

Well, man, oh man, boy, uh, do we need people like you at the moment because the information is starting to roll out thick and fast, isn't it?

It is. You can, you can sense a change in the narrative. Um, if anyone is watching YouTube and so forth and watching the Senate hearings of Fauci and so forth and watching especially the interview. There was an interview with Dr. Scott Atlas, who was one of the chief covid advisors to President Trump along with Fauci and Burks.

And he gave a wonderful two hour interview, which is on YouTube. I put it on my sub stack and he reveals what went on behind the curtains and It isn't pretty. Uh, there was no science, very little science, behind the recommendations and the policies that, uh, uh, were coming down from the U. S. CDC, uh, which, uh, the world suffered because of this.

And now it's slowly being revealed, the truth, uh, of, of how this COVID mess really happened.

Yeah. If only we could get more and more people to take notice of it, because it's there for all to say, it's not, it's hard to hide it now. It's like a festering boil.

Well, well, people say to me, some, some people say to me, well, COVID is over.

No, no, it's, it's not over. Um, the, the, uh, basic reason why we're in this mess. Still, is because of gain of function research, which, uh, was, uh, supported by Fauci, paid for by Fauci. And gain of function research is creating new, virulent, highly pathogenic viruses that do not occur in nature. And this is being done in laboratories all over the world.

And despite what we have seen, the carnage that we've seen over the last four years. I'm sorry to say that gain of function research has not been outlawed, has not been banned, is still ongoing, and it is still ongoing even in

Australia. And what could possibly go wrong? There is no high level, uh, BL 4 lab in the world that is involved in this sort of research, doesn't have a history of a leak.

They all, at some time, leak. And when you're dealing with these viruses, which could take a huge toll on mankind, uh, to my mind, this is nothing short of insanity.

Mad scientists around the world mining for, mining for, um, for issues, mining for, for drama. It's just, man, why do we do it?

I mean, before we get onto those reports, uh, and the data, Philip, I'm, I mean, on the background of what you've just said, and, you know, it, it, it's out there in the media now and in, in.

On YouTube. You can, you can see it freely anywhere at Senate hearings and the like. I mean, we learned last week that there was a, an assassination, uh, order put on Julian Assange by the CIA. I mean, how, we're at war with ourselves aren't we? I mean, how has there not been, uh, an order placed on some of these grubs that, that are doing this?

I mean, they are surely, uh, a threat to humanity. I mean, they should be taken out.

Yeah, look, look, I've, uh, struggled to, uh, stay in my lane as it were, uh, with COVID and the jabs for four years now. And, um, it was COVID and this, uh, pandemic, as they call it, um, which woke me up to other things going on in the world, which, which I won't get, get into here, but it made me really reassess, um, uh, the truth of what's going on in the world and what we've been told, and I have to say that if I were to be asked to lay the blame, the primary responsibility for this mess at the doorstep of one group, it would be the media, because if you don't have an honest, transparent, curious media that informs the public.

We are lost. There is no democracy.

Yep.

And I'm sad to say that when you look at things like, uh, what's gone on, how the COVID pandemic has been reported, even the other night with this Clayton's channel seven debate, it wasn't a debate at all. Because there was no one there to really debate the signs or the.

clinical safety and efficacy, although, um, Professor Gigi Foster did an amazing job at pointing out, uh, some of the shortcomings. Uh, the other members of the panel, uh, took no notice. She knows more about the social impacts of the, uh, uh, policy errors that had been made in her little finger than the other panelists would know in their lifetime.

And yet, uh, they, they showed really no interest in listening to what she had to offer. And I would have thought if you want to review what has happened and prevent it from happening again, Gigi Foster is one person you should listen to.

Absolutely, you should. And, uh, we're, uh, we're, we're toying with the idea of hiring a large theatre in Sydney to accommodate, uh, people like yourself on a panel on stage.

With another panel of, uh, of people who have a different viewpoint in, uh, in medicine and science in Australia, and we want to see that debated on stage. We're, uh, we're seriously considering that. I'll be spending some time with Professor Angus Dalglish in New Zealand in late September. I'll put the idea to him and we'd like to get some other people on, including yourself, Phil, but, um, uh, I think it's, the time has come when some of these people should front up, people like Nick Catesworth.

And they should front up on stage and let the people decide. I reckon it would be a packed house if we did that. And I think we need to, uh, we need to really investigate that and we will. But before, as you've mentioned, the

media, before we go into other issues, you know that what you did watch the spotlight program, um, the next morning at the front of channel seven in Melbourne, something incredible happened.

And I just want to share screen. Uh, this takes about a minute and I'll share screen and we can have a look at that because it is absolutely incredible.

You're my sweetest addiction. You're my strongest inspiration. And I love you, it's true. There's no mountain I could not climb as long as you are around.

And I Thank you for being here. Been waiting for you all my life. You are my dream come true.

You're the light in the dark and sad world of mine. We'd be lost if not for you, and I love you more. There you have it. That's, uh, that's a very touching tribute to

those people. For those of you who don't know, and those of you who think this is all fake and it's all set up, those people are the vaccine dead and the vaccine injured. And that's just a proportion of them. And that's called the Forest of the Fallen. And I know that people who watch this program and others would know about the Forest of the Fallen, but we know we're reaching people outside the Echo Chamber.

That's the Forest of the Fallen, and that is why a proper investigation at Channel 7 on that program should have been conducted on Sunday night, but it wasn't. It was a whitewash. Philip. I

get, I get very emotional when I, when I see that each one of those bamboo sticks represents either a death or someone who has been seriously injured, and that's not all of them.

That's only a tiny fraction. I work with Rosie Marshall, who is an ordinary person who I met in my campaign for Manly when we were trying to spread the word. I remember. And she has spent

countless weeks and months erecting those installations. And, uh, it's just heartbreaking.

Well, Johnny, Channel 7 are clearly, like all the others, complicit in something that will be, I'm sure, apologised for in the House of Parliament in 50 years time. But it's happening now and we're sick and tired of seeing our government apologizing to a whole bunch of different people half a century after the event that could have been stopped if the government and the mainstream media did their job.

Not only that, right now they're giving themselves awards. For what they've done. It's in my opinion, it's nauseating.

Well, not only that, Phil, uh, you know, a report came to us yesterday. The West is from the, I think it was the West Australian newspaper. Uh, the West Australian government is up for a bill of 4 million to dispose of time expired rat tests.

That's one little thing. I mean, that's nothing compared to what we've just seen useless. This just goes on and on and on. And why the general public are not outraged by this is purely and simply because the mainstream media do not give it the impetus that it needs. Exactly. Not at all. Look, there's so much more going on.

We want to unpack your critique of that spotlight program. But first of all, let's talk about some documents that have surfaced today.

When, um, the government, uh, does not correctly and honestly record and encourage adverse drug reaction reporting to assess The real safety or lack thereof of any therapeutic, um, and if there is limited clinical trial data supporting the safety of any new drug as there was with the COVID jabs, what do you use to assess the safety?

This, there's no real quantitative tool that is specific to do that. So many of us worldwide have had to resort to looking at the statistic excess deaths, which is basically the number of deaths from all causes this year by comparison to previous years. And excess deaths. I didn't even know the term excess deaths prior to COVID, but I, but I do now, and it's a very important statistic because people either are alive or they die, so that number is difficult to fudge.

You can fudge why they're dying, um, and that's another argument, but what I can say to you is that in 2020, when there were no COVID jabs. And the SARS CoV 2 virus was at its most virulent. Excess deaths, for example, in Australia were low. Very, very low. In fact, deaths assigned to COVID, even assigned to COVID then based on inappropriate PCR tests, and that's, that's another discussion, ranked 38th, just behind slip and fall deaths.

That's how rare it was. But in 2021 mid from about mid 2021 onwards. There was a surprising increase of deaths from a number of causes of cardiovascular. There was strokes, heart attacks, neurological diseases, cancers, and so forth. That's hard to explain away. And documentation has been accumulating. And this is one document, uh, which we, uh, presented to every Parliamentarian every state and federal politician in Australia written by there's about, uh, 25 authors there, including myself, but I was lucky enough to be able to to contribute.

So the politicians can't claim that. They don't know about excess deaths, and they've resisted, um, an investigation of excess deaths. They voted that down three times. Finally, they agreed to a, an inquiry, brief, or one, they assigned one day to it. One day to an excess death inquiry. And it's excess deaths that is really demonstrating the real lack of.

safety of these injections and the excess deaths are continuing. Uh, the paper that, that received a lot of, uh, interest just recently is the Kobander and Ressler paper from Germany. And, uh, that, uh, Analyzed all cause mortality in Germany, and it's showing that excess deaths is continuing into the third year.

In the beginning, we saw a spike in excess deaths due to acute effects. Acute effects of things like stroke and heart attack. But things like cancer and neurodegenerative diseases occur over a longer period of time. And now I think we're seeing more of those that dementias and so forth, but I'm afraid to tell you that that's not new news.

Um, there, there have been publications before, for example, a publication from Norway that I've mentioned in my substack, uh, by Arstead, which, uh, uh, concluded, and I, and I can quote it because I have it here on my screen, analyses of 31 countries weighted by population size show that all cause mortality.

During the first nine months of 2022 increase more the higher the 2021 vaccination uptake. That's over 31 countries. They related the vaccine uptake to all causes of death. The more vaccinated, the higher the death rate. Now, you can sit back and say, oh, that doesn't prove anything, but it's very, very strong evidence.

Yeah. And in light of little evidence of safety to the contrary for the jabs, it's very compelling. So this isn't new news, it's quite consistent with the data that's been presented around the world. And that's why a lot of people, including myself, continue to say these things should never have been approved.

They cause more harm than good, and they should be taken off the market now. And yet, vaccine mandates in this country are still in place. Still in place. In fact, people are still wearing masks. And there's no scientific evidence for masks. Fauci has admitted that. And yet, why isn't the media, the mainstream news media, reporting this stuff?

It's unbelievable, isn't it? It's unbelievable. What

can you say? I mean, we're sitting here dumbfounded for a minute because, uh, we've been shouting this from the rooftops now for three years. What more can we say? Um, all we want is for this to be thoroughly and properly examined, but there's a reticence which was clearly demonstrated by that program the other night on

channel seven with Michael Usher and, uh, and John, the letter, letter to the Australian journal of general practitioners.

Have you got that there?

I have, mate. Yeah, I can read that. So, um, this was a letter that was, uh, sent in, uh, and I'll just read a bit of it. Um, so the heading is, should we now discuss possible COVID 19 vaccine negative effectiveness? Question mark. And this is from July, 2024 correspondence to, to the publication.

Um, Commendations are due to AJGP, which is the Australian Journal of General Practitioners, and Professor Robert Tindall for their recent article published in the April 2024 issue, including the bold statement, because COVID 19 vaccines were approved without long term safety data and might cause immune dysfunction, it is perhaps premature to assume that past SARS CoV 2 infection is the sole common factor in long COVID.

The possibility that long COVID could be related to the vaccines is important, but the focus here is on the notion that the vaccines could cause some sort of immunosuppression, especially as noted by Professor Tindall, since the spike protein exhibits pathogenic characteristics, to say nothing of the class switch to LGG4 antibodies, which Professor Tindall thinks could lead to to autoimmunity and cancer.

I have speculated as much, noticing many data sets indicating that not only does COVID 19 vaccine effectiveness appear to decline very rapidly, varying for infections, hospitalizations and even deaths, it can reach zero, no effectiveness, and beyond. Negative effectiveness. Uh, now I understand that that was written by, um, a gentleman who has a bachelor in pharmacy, uh, and a PhD that, uh, um, Ralph Laa.

Yeah. Uh, he's associate lecturer, uh, fa ss, I'm not sure what that means. Um, at University of Sydney Newswales.

Yeah, I've, I've heard of him and, and he has testified before an inquiry, uh, uh, before a committee of the U. S. Senate. And he, uh, does know what he's talking about. Uh, the, the idea that, uh, these COVID jabs, uh, have a negative efficacy, uh, negative vaccine efficacy has been known for some time because, uh, the hospitals, uh, were reporting, especially in New South Wales, New South Wales hospital system was one of the best sources of information, which related, uh, the people in hospital who were there for COVID and whether or not they were in ICU.

or not, and how many jabs they had. Uh, that was being reported up until the end of 2023 when, uh, it, it, it became apparent that there was a direct relationship between the people in hospital, the numbers of people in hospital and ICU with serious COVID and the number of jabs that they So they stopped reporting the data.

They no longer report. that sort of data across the world. I know of no other place that is routinely reporting the number of serious COVID cases and relating that to the number of jabs and boosters that people had. It would seem to be a fairly important thing to do.

Especially now, as we're in the middle of the world's largest medical experiment, so we were told.

Yeah. Surely it's all about data collection, not hiding the data. Yeah.

That's, that's exactly right. This, this business about long COVID is, uh, really interesting because, um, the, uh, the toxicity of the virus is, uh, directly. Uh, uh, related and responsible to the, to the, uh, spike protein and guess what? The COVID jabs produce spike protein.

So how does one know that long COVID is not a vaccine injury? Now,

what you're saying is, what you're saying is that, that, that the, um, that, uh, long COVID is a camouflage net they're throwing over vaccine injury.

Exactly. And there are studies that, uh, that have shown that, uh, people who not had COVID 19 but had the jab have exactly the same symptoms as those people that describe long COVID.

There's some good, good studies that show that.

Getting back to the program on Sunday night, the spotlight program, um, you, you watched it all the way through, I assume. Mm hmm. I did. It was hard, but I did. Uh, Professor Boy, um, have you had anything to do with him? He's, he's involved with the, uh, TGA.

I've never met him, but he has been, um, a mouthpiece for the, to promote the vaccines, uh, nearly from the beginning.

I, I don't know what his relationship is to the industry or his connections. But I would be one who would be in favor of insisting that any health professional like this gentleman who spoke publicly in support of the vaccines should disclose any conflicts of interest before they speak. And uh, this is, this is a real problem because um, uh, the, the public tends to trust, used to trust, doctors and people in white coats, and it's hard for them to believe that, that maybe they're not telling the truth or the full truth.

And, uh, many of the people that you, you hear from. Either have direct or indirect conflicts of interest with Big Pharma. And, uh, that should really be disclosed. I can disclose, I've, I've never been paid to do what I'm doing. I, I have no connections with Big Pharma now. I, I retired many years ago. But people who speak to the public in an authoritative way should declare their interests, conflict of interest.

What did you think of his comment that the TGA needs more funding?

No, they just need to do their job. Now, the TGA, I know them because I worked with them for over 40 years. They are not incompetent. They know what they're doing. And as I've said on many occasions, given what we now know, that really sends shivers up my spine.

Because they know the truth. And they just need to do their job. They don't need more money.

I want to reiterate that, uh, the TGA, Australian TGA, is the recipient of the highest level of funding of any other TGA around the world from Big Pharma. 95 percent of their funding comes from Big Pharma. So the fox is guarding the hen house.

Yeah,

that, that's exactly right. No, the answer is not more money. They just need to do their job and be more transparent and responsible.

Do we need another? Do we need an Australian CDC?

Absolutely not. We can see what the U. S. CDC did to the world. Um, we're just finding out now how drug research and clinical trials and publications are controlled by organizations like the National Institute of Health in the U.

S., the CDC in the U. S. and maybe the NH and MRC here, right? I mean, the parallels are inescapable. Try and get a grant to critically analyze the effect of carbon dioxide on climate. Try, try, try and get a grant. Or try and do a study and publish it. This is, um, this is shaken, um, the whole basis. of scientific endeavor.

Science used to be something that you could trust and now with COVID, as we've all learned, uh, you, you really, the average per person has, has not a chance of really critically evaluating what is true and what is not

true. Uh, they don't have time to do it. They're not skilled to do it and they can be easily fooled really easily fooled.

Most doctors who have been prescribing the vaccines. I think have been fooled maybe in the back of their minds. There's this niggling doubt, but they can't afford to let that come to the surface. Most of them. I've met a lot of them who've sacrificed an awful lot to tell the truth, but they're in a minority.

Hmm.

Johnny.

Yeah, Philip, I, I, interestingly, I still think there just seems to be such a, a, a big gap between those of us that are on one side, uh, you know, from our position, uh, to professionals on the other side and I'll, I'll, I'll give you an example. I, I. I put a post out on my Facebook page, uh, that Russell Broadbent had, had, uh, put up about ivermectin in Parliament and the local pharmacist got quite, um, upset that, you know, I'd put that up and said a number of things, but then went on to say somebody then questioned him about whether the vaccines were safe and he said, yes, safe and effective.

And he goes on to say, uh, because I put up some, some, some stuff, uh, he says, I appreciate John Larder. I appreciate that anecdotes are important and individual experiences resonate deeply with us all. I also appreciate that people have suffered side effects from vaccines, something that can happen with any vaccine or medicine, in fact, any medical intervention at all.

However, the vast body of evidence available to all of us at this time shows that the Pfizer And Moderna vaccines are safe, as safe as any other vaccine. The evidence is also clear that they prevented many deaths and serious illness due to COVID. Furthermore, I appreciate that the doctor professor you mentioned may be prominent in this field, but we don't practice eminence based medicine.

We practice evidence based medicine. Evidence that is peer reviewed. Sadly, I suspect that this is the wrong crowd and the wrong platform to have this discussion. And that was in relation to a, a comment that I'd made about Angus Dalglish, uh, reiterating that these vaccines will make, uh, thalidomide look like a pimple on your bum.

What that person is really saying is that they have been told these things by people who he or she trusts. When those people say the TGA says the vaccines are safe and efficacious because it's the TGA and the TGA says there's a lot of data to support that, that person believes it. That's the problem that we have.

It's only when you critically analyze the data and look beyond the narrative that's been propagated. By the government, does the truth reveal itself? And the truth is there for all to see. Unfortunately, it's mainly in excess deaths. Yes, there's anecdotal evidence. And I, I know people who have died. I know people who have got the jab.

Doctor friends of mine, who I tried to discourage them from getting the jab. Their blood pressure's gone through the roof. Arrhythmias. Traveling around with me in my car, monitoring their blood pressure. It was so bad, you know, yes, it's anecdotal, but when it happens to you or a close friend, it really comes home, but we can look further than that.

If you look at the literature, if you bother to look at the literature, and I've published an awful lot in the literature that person, I almost guarantee you has never read the published reports of anyone like myself. Who has questioned the safety and efficacy of these jobs?

Well, that's the issue, isn't it? We have to get to these, uh, people and, and steer them in the right direction.

Look, look, I, I don't, I don't think that those people are necessarily bad people. I think they were people like myself. I, I spent over four decades in the industry and I was not aware myself, how difficult it was.

to really get to the truth of a lot of safety issues within the industry. I did not see it myself. So how can I expect others that weren't as deeply involved as myself in the industry to realize it? So I have to cut them some slack. However, we now have more than three years of experience with these traps, and the data is overwhelming it's overwhelming you you you you either have to be illiterate or so time poor that you you you you you can't afford to spend the time to do it.

or willfully blind, or emotionally incapable of facing the fact. I mean, a lot of people are incapable of doing that. If you've advocated your son or daughter or mother or father to take the job and they've been injured, it's very difficult for you to say, Oh, that could have been the job. From the emotional point of view very difficult to face and I can understand that I have sympathy for that.

But the reality is the reality and the problem we're facing right now is that if we don't face up to the truth, this is going to happen again. And we can't afford to let this happen again. There's been too much damage done. We just can't afford to let this happen again.

I just want to read you a text I got from Brad Hill at the Cali Hotel.

Uh, we screened his interview, uh, just a few nights ago, Johnny, as you remember. And we interviewed him because he, he's conducting a lot of wakes at the hotel in the Hunter Valley, a lot more than usual. And he's talking to people across the bar. Now this is anecdotal, of course. Uh, and this is what he says, dead set.

This is insane. And he mentions a guy's name, who only just buried his father a fortnight ago, is just telling me at the bar that one of his neighbors, a young lady, has died today. In the next breath he says, yeah, been a rough day. The younger brother taken to hospital today as well, been diagnosed with some sort of aggressive cancer.

The bloke standing at the bar next to him goes on to say, that's no good. I've got to bury my sister in law next week, the cancer got her as well. They have no idea what's going on, to my knowledge anyway. Like honestly, you just couldn't make this stuff up.

There are oncologists, world class oncologists, who are ringing the alarm bells.

And it's so difficult to get people in authority, the bureaucrats and the government to listen. We've all seen the videotapes of, of, uh, uh, parliament in the, in the UK where, where this is raised and they, they scurry out of the chamber to be able to claim that they didn't hear what was being said. And how long does this have to go on for before something is really done.

Um, does it, I, I, I thought that when a few famous names died unexpectedly after injection, sports stars and so forth, and you, you know who I'm talking about, that people would have started to, to ask some questions. But this has gone far beyond that. Now we, we have these statistics. The Australian Bureau of Statistics.

Has now changed the mathematics to report excess debts because it was becoming embarrassing. It was changed in the UK and they changed it here as well in the effect is to reduce to lower the reported incidents of excess debts. That's not the job of the Australian Bureau of Statistics. The Bureau should be reporting accurately and they should be defending.

their change to the model that they use. Because excess deaths is the only thing we have. If the TGA aren't doing their job in terms of reporting cause and effect, in assessing these hundreds of thousands of reported cases of adverse events, they're If they're just hand waving them away, and I think they've admitted to, uh, I think the number is about 16 vaccine related deaths at the moment.

That's it. If they're not doing their job.

You're right, Philip. They, uh, there needs to be a national task force, uh, initiated by the police commissioners to investigate these. Uh, deaths, uh, this, this is criminals, murder, uh, call it whatever, whatever you like. I mean, there has to be some form of investigation. You just can't ignore this. I mean, they, they want to, uh, run inquiry into basic stuff, but they won't look at this.

I've, I've made Uh, at least two separate, uh, journeys to the police. Uh, I've, I've tried on numerous occasions to contact the homicide commander in New South Wales, uh, a guy by the name of Dan Doughty. He's never returned one phone call, one email. I mean, this whole thing is just crook. Uh, they get away with this.

Um, I mean,

it's, it's, it's, it's undermining the confidence. Yeah. in our medical system to begin with. I mean, the politicians, you could never trust them, but, but you, most, most of us trusted our doctors and we trusted our scientists. You just can't trust them now,

but it also, that's what it's come to. It undermines our faith in the judiciary and law enforcement, judiciary as well.

And if you needed any, Reminder of just how bad this is. I mean, the light bulb moment for those people that, that, uh, aren't awake, uh, on spotlight the other night, the one, the one moment that, uh, that I think really should have woken people up was Karen Phelps. Now here, we've got a doctor. That is injured from the vaccine.

She admits it. Her partner is severely injured. I mean, she, she, she gave a, uh, a list of, of, uh, of issues that came right out of the Pfizer handbook. There is no doubt, uh, that they are injured. Karen Phelps went on to say that the reporting to the TGA in regard to vaccine injury is grossly underreported.

Now, I don't know what's going on in her headspace, but then she was then talking about getting the vaccines. Uh, her partner said she wouldn't touch them with a 10 foot barge pole, which, which you wouldn't blame her. Uh, but I mean, I don't know how anyone thinks this is random stuff. You've got two people in the one household that are injured by the same, by the same vaccine Pfizer.

One of them's a medical doctor who says the injuries are grossly underreported. And that's because people were gaslighted because nobody gave any credibility to the fact that these people were suffering from vaccine injury when they turned up at hospitals. Uh, with palpitations, with heaviness in their chest, with all sorts of unexplained, um, issues that were going on.

Headaches, blood pressure issues, one minute somebody had high blood pressure, next minute they had low blood pressure. It was all a big mystery, everyone was baffled. Well, there's nothing to be baffled here. It goes

beyond anecdotal reports. I mean, this, this paper that was published on June the Uh, 21st, uh, a few days ago, uh, by Holscher and, and McCullough and co.

Uh, was actually a report that was published many months ago in Lancet, and it was a bombshell report of cause of death as analyzed by autopsy. The people that were. The literature was full of individual reports of people who died suddenly after vaccination and McCulloch and co reviewed these reports and they distilled them down to about 325 reports, which were, which they assessed as being comprehensive reports, which included vaccine status and good autopsies.

And they reported that 73.9 percent of the reports of these 325 autopsies that were reported worldwide were due to the jabs within an average of about 14 days. Now, that was just republished now. In preprint form, but Lancet, which is considered to be one, if not the leading authoritative medical journal in the world, brushed it, stomped on it, took it offline.

Now, if that sort of thing happens, how are we supposed to know what the facts are?

You

can't.

Then Dr. Sanjeev on that panel. I don't know. He can't remember his last name, uh, said, uh, when Gigi Foster challenged them to look at, uh, some alternative points of view on this, his only comment was, well, the World Health Organization is wanting to crack down on misinformation.

Yeah.

According to Dr. Daniel Ninio.

Isn't that, isn't that interesting?

According to Dr. Daniel Neneo, who keeps messaging us wanting to come onto the program, you've appeared with him on another program. Uh, you and McCullough and, uh, Dalgleish and all the others, you're all cooked. There's, you're all, um, radical cuckoos.

Um,

right.

So

I'd like to, I'd like to hear a criticism of, of anything that I say. I, I've, um, uh, been, uh, publishing and presenting in many places. And, um, I have yet to, uh, receive, uh, any credible criticism of, of what I said. I, I'd, I'd welcome any criticism. If I, if I've said anything that, um, is, is incorrect, uh, or I've, uh, provided misinformation or misquoted anyone.

I would be the first one to really want to hear about that. But unfortunately, there's been a lack of willingness to debate. Um, the, the people who are, uh, supporters of the JAB, uh, really don't want to do that. They want to rely on this. They fall back on this misinformation, disinformation thing from the WHO, right, who's, uh, headed by Ted Ross, who's unelected, unaccountable.

Total immunity and supported by Bill Gates. So what could go wrong there?

Well, and the thing is, Dr. Ninio is going to come out and say, I'll debate you, but you've already done that. But I've, I've tried to debate him. I want to, I want to say this to Dr. Ninio who keeps pestering us. I'll tell you what, when you can arrange for Philip Altman and Peter McCullough and Angus Dalgleish to appear on a mainstream media program and tell the truth about what they're doing and what's happening and what evidence they have, we'll put you to air on Club Grubbery.

Yes, and I would insist up front that he reveal his connections, if there are any, with the industry, who he's talked to in the industry. What his relationship is to the industry and any conflicts of interest. I will declare mine and we can start a debate on that basis.

I have, uh, received, uh, a message you can, you got, here we go.

Uh, received a message showing, uh, a Facebook post put up by. The doctor we're talking about on a social media on obviously social media platform. Uh, he says, I remain convinced that the vaccines prevent death and

severe COVID and could and cause severe side effects in a very, very small minority. And that this is a price worth paying to prevent more death and suffering from COVID.

Then he has to put some numbers around that. That's, that's a bumper sticker. Okay, that's a, that's a bumper sticker. A bumper sticker. I, I want to hear, I want to hear some facts and some data. Right.

But he doesn't give you that when you debate him, like, no, of course not. You don't, you don't hear it. It's all from the

course, not,

um, but yeah, anyway, we, we would happily have, uh, Dr.

Nick Catesworth on to, uh,

uh, I, I'd be happy to chat with Nick as well.

I know this is getting a bit like cafe locked out here with the, uh, with the videos, but I just sent you a video actually, uh, that was put up by John O'Looney. Um, now I'm just wondering whether we might be able to intertwine this in. I think this is very, very interesting.

Um, it's a surgeon, um, undertaking a, um, uh, procedure. Uh, I'm not sure whether it's a, uh, Cardiovascular procedure or neurological near near a neuro procedure. I'm not 100 percent certain, but, um, what the surgeon says during this, uh, operation, it should, should, should be mine. Mind blowing to everyone. Um, I mean, it just gives you more evidence of what everyday surgeons are seeing, uh, throughout these, these operations.

Yeah,

right. Um, and do that right now.

Um,

once again, I'll do some editing here.

I think if we'll give any boosters, we need to check the antibody for the patient because I think that booster causes, and then the booster vaccination. I think if we'll give any boosters, we need to check the antibody for the patient because I think that booster causes vasculites for the patient with the previous infection and show exactly what's going to be in this guy's Like remember the other side, we couldn't do anything because it's totally occluded.

And we're seeing this so often now that we don't understand. I think that COVID and COVID vaccination have to be a risk factor for, for cardiovascular disease.

So look at this. This was going to the brain of the patient. Nothing will dissolve this TPR, anything like this. Definitely

so interesting, uh, uh, comments there. Hoodie, I mean, the surgeon there saying that he, he was attributing, uh, that to, to the vaccines. Uh, and, uh, he also went on to say that, uh, TPA, uh, which is basically like a, uh, a thrombolytic, uh, you know, draino, uh, that can be used, um, has no effect. and horrendous stuff.

These, these are not normal clots. There's been a lot, uh, said about them, but not in the mainstream news media, of course. Uh, they're amyloid, uh, basically amyloid, rubbery clots. And, uh, if you, if you, uh, look at, uh, some of the, uh, uh, morticians that have been interviewed, especially by John Campbell. Um, on his, um,

on his website, um, you will, you will see that, um, uh, these morticians are absolutely shocked at what they're now seeing, and they haven't seen this sort of thing before.

They're occurring mainly, uh, uh, after people have died, but, uh, they can occur in people who are living. And I've, I've met one such person. Who, who has these amyloid clots and there are almost impossible to get rid of. Um, no one really knows the exact mechanism of action, but, uh, it might have to do with, uh, what's called frame shifting, with the, uh, genetic code, uh, that's contained in the mRNA.

It's, it's, uh, Uh, we don't have enough time to go, go into it here, but there are some theories as to why those things are occurring. I

want to share something else again, uh, that also has come out today from channel nine. It's not a video clip, but, um, let me share this with you. It's a post on Facebook from, uh, Tofafield.

Life expectancy falls for the first time in decades. Channel 9 News. Life expectancy in Australia has dropped for the first time since the mid 1990s. Excuse me. A boy and a girl born in Australia in 2020 to 2022 can expect to live on average 81. 2 years and 85. 3 years, respectively, according to a new government report which is released every two years by the Australian Institute of Health and Welfare.

Thank you.

So that's on channel nine.

Now, that's something that, uh, when, when you look at evidence, you, you look for a range of evidence and a breadth of evidence and a depth of evidence. Whenever you're a scientist, you don't grab onto a single bit of evidence, a single anecdotal report, but everything that we've been talking about is consistent.

It's consistent. Time wise with the introduction of these gene based injections that the world had never seen before and were very poorly researched. And as we now know, as now has been admitted and found out that a number of deaths were covered up in the initial clinical trials and not reported in a timely way to give a better chance for these things to be approved.

by the US FDA. Now, to my mind, uh, there's been criminal behavior here, and there are legal cases going on in the US, especially in the state of Kansas. Very specific allegations are being made. So, FISA is in court in, in this Kansas case, and Uh, a lot of the things that we've been discussing will be tested in the court of law.

And it'd be very interesting to see what happens. But the truth has to come up. But at, at the moment, the judiciary here, in terms of its performance, has been very disappointing in terms of being receptive toward hearing factual information presented by a number of experts who are very, very concerned.

And, uh, the judiciary seems to be instructed, that's how it appears to me, by the government to follow a certain line and not give air time to people who are questioning the safety and efficacy of these, of these injections. Thank you.

Well, Industrial Commissioner, Lyndall Dean came out in favour of, uh, of, of the evidence that's being presented from a common sense standpoint, and she sent away for re education.

Yeah.

By the Industrial Relations Commission. I mean, how much more evidence do people need that there's an agenda here that's being followed by all facets of government?

Well, Phil, it's been, uh. It's been great getting your insight into all of this and we must continue to contact you and get you on the program because you always allude to things that need to be alluded to and we thank you so much for coming on and I think we we need to bring this to a close with a prayer.

for doing what you're doing. I say it all the time because when the mainstream News media has let us down. It's people like you that, uh, we need to depend upon.

Thank you so much, Phil. Let's, um, let's call on a prayer. Lord, Father in heaven, we thank you for the opportunity of this interview tonight and the program that we've just aired.

We thank you for Dr. Philip Altman and his courage and his dedication to keeping the truth alive, Father God. And we just pray that, Some of these truths will start falling on ears that are open and hearts that are willing. And we ask you to be with all those beautiful people who have been vaccine injured and lost loved ones, to let them know that there is part of this Australian nation that cares for them, that is concerned about them, and will keep being their We thank you for this in Jesus name.

Lord, Amen. That's it. And we will continue to be your voice and, uh, that's all we can do. I want to give a shout out to all the hoodies heroes out there because boy, am I getting some great reports talking to Dr. Altman, uh, earlier before we recorded about a group in, in the Southern Highlands that he's, uh, he's.

Seeing evidence of doing great work. Um, if you haven't joined Hoodies Heroes, it's, it's really simple to join. You go to Hoodies Heroes national page on Facebook. There's various other social media platforms as well. You are, you have to answer three questions. It's really important that you answer those questions.

Uh, we're trying to keep trolls and scammers out. And, uh, if you answer those questions, you'll be admitted to Hoodies Heroes and you can join through the state pages, local community groups. In your area, or you can even start one because I'll tell you what, these people have been doing this for three years now and they are consistent.

They are loving, they're compassionate and, uh, they're, they're bonding and rebuilding community. So I strongly urge anyone to join that group. It doesn't cost anything to join, and you're going to meet some amazing people that we've met in the last three years. So, um, get over to that. Johnny www.

clubgrubby. com. au and what's our purpose?

Keep smashing these interviews up to keep the, uh, to get the public informed about what's going on. Uh, hopefully we, we break that damn wall. You know, I think it's broken. I think Kerry Chant needs to call the SES. The

roof's come off and so, um, yeah, look, it's, it's, um, it's tiring work, but boy, it's rewarding because we are really seeing ourselves standing on the right side of history and we must be consistent.

We must be disciplined and we must stay in our lane. This is really, really important. And Dr. Phil Altman, that's what you've been doing. You said it during the program. You're trying desperately to stay in your lane as hard as it is because we're seeing so many things now starting to gel with this whole narrative that are just sinister by nature.

And, uh, and we've got to crack it open and, and this is our best chance to crack it open and get some, some real debate happening. So, Johnny, you've often been heard to say. You just couldn't make this stuff up. You couldn't stay out of the trees, everyone. What you did yesterday got you to today. If you love somebody and you haven't told them, give them a call and tell them you are much loved and appreciated and thanks for your support.
