Club Grubbery - Raw transcript of interview:

2025-06-18 Graham and John speak with Dr Astrid Stuckelberger and Katie Ashby-Koppens

Well, hi everyone, and good evening, Johnny Lata, Wednesday the 18th of July. It's club grubby time again. And I don't know about this interview other than to say, I think we're in for a real ride with this one because John, uh, you are the chairman of the Aligned Council of Australia and, uh, the primary focus of that organization.

And we're also joined, we're gonna introduce our special guest in a moment, but we're also joined by Katie Ashby Coffins, who is, uh, one of the, uh, founding, uh, members of the A CA and also one of their, uh, lead legal counsel. Uh, so welcome to you two, Katie. But, um, the Aligned Council of Australia is all about.

Trying to get this government to see the inherent danger of signing up to the International Health Regulations for the WHO. And so our guest tonight is going to really look if we can get this interview out in amongst our political class in Canberra. That's what we need to do because we have Dr. Astrid, uh, Stolberg from Geneva, who has a, has a curriculum.

Honestly, it's about 28 pages. Uh, I've reviewed it. I didn't know whether to read it or wait till I made the movie and watch it on television. It's, it's, it's astounding. Astrid uh, thank you so much for being on our program.

You, you're welcome. It's my pleasure. Thank you for inviting me.

So let me give our guests a bit of an idea of what you, uh, uh, your background.

Um. You're an international, um, sorry, you're an inter-disciplinary scientist, which means you cover a variety of disciplines. Uh, you've studied at the University of Geneva and, uh, Erne and you've spent about 25 years doing that and working in those organizations. You're an invited professor at many European universities, but primarily apart from all the other things you've been doing, you worked in teaching and development of the IHR, the International Health Regulation for the WHR, and you worked on guidance of pandemic preparedness and you have insights that go way back, insights that the whole world needs to know about.

And, uh, tonight we're really looking forward to unpacking that with you. So thank you so much again.

Thank you. My pleasure. Um, I'm glad this can finally help, because nobody from WHO is speaking and, you know, they don't want us to speak. They, they cancel my courses, my lectures. So yeah, I'm, I'm glad that we can use it and, uh, I'm, I'm there to help.

So you, you have really laid it on the line. There's no doubt about that. Um, being a whistleblower in any organization can be risky business, but in this particular organization, I mean, the WHO is not renowned for its, uh, integrity, uh, especially more and more each day as we learn so much. We're learning a lot more about their, uh, their director, um, who has a very checkered past.

And, uh, so look, we need to unpack this, but John, I want to, I want to have you included in this as the chairman of the a CA, uh, like we did last time. We had a meeting like this. So I. Um, John, if you could introduce, um, the, the questioning with Astrid and, uh, Katie.

Yeah, thanks, Woodie. Look, I, I think it'd be really good, Katie, if you kick off and, and just maybe give everyone out there a a, a really simple overview of what, what this, uh, I-H-A-I-H-R are, the pandemic treaties, how they've come about and what the timeframes are, et cetera.

Just so people have got a really good, uh, working knowledge of what we're talking about.

Well, it would be my pleasure. So it's confusing by design, but I'm gonna simplify it down. There are two pandemic treaties we are gonna talk about. Tonight. The first is the International Health Regulations, we'll call them the Pandemic Regulations.

Uh, they've been around for a significant period of time and have undergone some amendments since COVID. Then there is the Pandemic Agreement, uh, which is a brand new document, which was just voted on at the World Health Assembly last, uh, month, uh, and was as purportedly adopted. Uh, it's got a lot more, uh, to happen on it in respect of an annex extra, so it won't able to be, uh, won't be able to be signed by any country.

Uh, for a sign for at least a year. So we'll just sideline the Pandemic Treaty, sorry, pandemic agreement, and we'll just focus on the International Health regulations because they have a looming date. The International Health Regulations, uh, which we're talking about tonight, are amendments to the 2005 VER version.

Uh, the International Health Regulations have been around for decades, uh, and they're really designed to, uh, assist countries to receive guidance, to respond to public health emergencies, uh, of various concern levels. Uh, for example, with COVID, the 2005 International Health regulations were in existence, and those, uh, allowed the Director General of the World Health Organization on the 11th of January, 2020 to, uh, notify or declare COVID as a, uh.

Fake, which I'm not joking, is the acronym. It means a public health emergency of, uh, international Concern. Uh, and then subsequently, two months later, uh, the director general, uh, declared the um, uh, for COVID, uh, pandemic. So the International Health Regulations were 2005 were the version that were hanging around at the time of COVID and really allowed a lot of things to happen since COVID and for the reasons of what the World Health Organization describes as the catastrophic failure of countries to, um, essentially do what they were told or to act in solidarity, uh, solidarity and.

Equity. Uh, the WHO has been busy writing amendments, uh, on the 2005 version of the International Health Regulations. And those significant amendments have been, uh, received by countries and Australia and most other countries have until the 19th of July. So that's a month, uh, from today to expressly reject the International Health Regulation Amendments.

Otherwise, we are duty bound to, uh, include them into our domestic legislation by 19th of September, 2020, uh, five. Uh, and we've got to also, uh, engage or bring into light a organization, a, uh, national IHR Authority, uh, that ensures that we do all of the things that we've said we're gonna do under these doc, uh, under this regulation.

Uh, that's pretty much in a summary. So we're focusing on the international health health regulations, which is perfect 'cause Astrid, uh, used to take the courses for that. So, um, we've got the subject matter expert of experts right with us tonight.

Mm-hmm. And Katie, uh, just, uh, further on that, the, the real risk to Australians, uh, I is, is exactly what we're seeing overseas in places like Brazil, uh, where, where they're finding families for not vaccinating.

Uh, there is some reports that that might be, uh, being looked at now, but, uh, up until recently that's been the case. Uh, and in Singapore, they've just introduced laws after Bill Gates visited Singapore, uh, coincidentally, uh, which will allow them to jail citizens who refuse to be, uh, vaccinated in a pandemic.

Yeah, well look to, to some extent that at the end of the day is a law made by the country, or in our particular situation, the states. Uh, and we've got certain, uh, similar legislation in Western Australia that isn't necessarily a decree coming from these international health regulations per se, but certainly it's laying the groundwork, um, to allow states to feel comfortable that they can do that.

Uh, and the reason why that is, is because there's requirements around the, or specified in the international health regulations that require increased surveillance, uh, increased, uh, testing, tracing, um, and tracking. Uh,

various other, uh, impositions on our human rights, which really just gives states, uh, the right or, or, or the, to feel that they have the right to impinge upon our human rights even further because we've got this watering down o of, of our rights, uh, as a consequence of.

Uh, being or under the fear or under the guise of the next pandemic, which the WHO is, um, gladly touting is just around the next corner. And of course, we've had Dr. David Bell on before and he says, look, naturally occurring, pandemics are on the decrease. Uh, the last super, uh, large one that we had was the one after the first World War a hundred years ago, um, where, uh, the Spanish flu.

Uh, and since then, the, um, uh, world Health Organization counts in their pandemics, uh, uh, number of different types of disease, which I think has killed, uh, 26,000 people, uh, in the world for the, in the last 20 years. So, you know, we are talking about this next pandemic, uh, as being a, um, a, a large scary thing just around the corner, but I just keep coming back.

The same thing over and over again with these documents is the WHO is gifting itself more power. We've got politicians who are willingly giving it away, uh, and we are more at risk, uh, from these documents, uh, of human nature than we are of Mother Nature. They are really are laying the groundwork to allow, uh, some pretty incredible, uh, things, uh, to be encouraged, uh, under the guise of recommendations, which we know that our politicians, uh, will, uh, be, uh, get punched drunk about, uh, with the options and the opportunities that they have, uh, under, you know, the recommendation of the World Health Organization is.

Mm-hmm. Mm-hmm. It seems like a free ticket out of outta jail. We can blame somebody else.

That's exactly right. That's exactly right, Graham. And that's, that's such a big part. Part of this is, oh, look over there, kind of thing. So that's what we are really wanting to draw to attention. And if all of what could happen under COVID could happen under the 2005 international health regulations, the additional layers of surveillance and censorship control, uh, it, it's something we all need to be particularly concerned about because it's layering up those mis and disinformation legislation.

It's layering up the digital identification vaccine passes. You are not gonna have the right to be able to go places because you will need to have a certificate that says that you have received X, Y, Z.

Mm-hmm.

Yeah.

Astrid, um, uh, we'll probably go into a lot of the grubby stuff, uh, that's going on behind the scenes in the second half.

But, uh, from your point of view, having been involved in, uh, the teaching of all this and, uh, essentially a specialist when it comes to pandemics with the WHO, uh, what, what's your take on on this? I mean, we've got America, uh, flagging that they're exiting. The who? Italy, uh, Argentina. And, and, and it looks like New Zealand have put their hand up and saying that they're not gonna at least sign these, um, treaties.

So, uh, what's your take on, on, on this, uh, really deep dark issue here? I mean, it's, it's, it's, it's nasty stuff, isn't it?

Uh, yeah. I must say from the beginning, I, when I realized this was all fake, uh, when they wanted the lockdown, that that was. I, I just couldn't believe that something that in the international regulation is the last resort, uh, and that you do it locally and suddenly all the planes are grounded and everybody locked down with the mask, with all those measures, with hydrogel things in, in the shops with plastic in front of you.

I, I couldn't believe it. I thought this, this, this is a coup, it's a coup on, and I, I, I thought, okay, calm down. But, uh, I, I, I really tried to make coherence and, and we are now at the end of this accumulation and chain effect of lies, deception of fake science, violation of IHR amendments. I mean, and of ethical.

Uh, like, like, uh, Katie says human rights is within the international health regulation, and I, I was in charge of the exercises. So we will come back to that. And there are articles very specific where you cannot ground the airplane and you can, you cannot just stop travelers from traveling. And this was, was against the international regulation, which the objective was to, uh, uh, keep the business of, of travel and commercial business.

That was the fourth, um, checkpoint of the annex two. It's an algorithm that nobody's talking about, but should have been used. So when, you know how, how the countries do for their country and you see that they took a standardized measure globally, which is impossible logically, epidemiologically, legally everything we are now.

Five years later, and they keep on, and this is, uh, this, um, from the beginning, this, uh, they, they made many pandemic treaty and then IHR amendments that just blew up suddenly in 2022. I, I mean, I, it was like, what are they doing? This, this, uh, IHR goes very well. I mean, you don't need to change every article to make it coercive.

So I spent time studying it at the beginning and I said, this is really crazy. They are, they have a algorithm of coercion. And of, um, taking out off the responsibility of the country. So countries normally in WHO decide, um, it's upon request of the country that WHO Secretariat coordinating, uh, you know, member states is, is supposed to act.

And there we see the opposite. WHO is dictating to the world and everybody is obeying. So I, I'm, now, I think what you're doing is extremely important. I've been, you know, of course in the rally last year to oppose this and we did text to try to oppose, et cetera, and, and to distribute it to, to everybody that wants it, uh, on sovereignty and how to, to show that this is a massive violation of all the levels of international law, United Nation Law, charter of United Nation.

You universal declaration of, I mean, we will go back to that, but, and of the constitution of the countries. So we are now in front of, of this, uh, massacre of our rights. And, uh, I can't believe that Australia has been so coerced and with France, I think there are some countries in the world that have been much more, um, you know, uh, locked down and, and attacked on the civilian civilians.

And so I, I'm, I'm glad to be here. And what I, I want to say is that, uh, we. Uh, yes. What, what Katie and your groups are doing is extremely important. And I think that you could be the modal for the world because, uh, um, maybe we can make a template and, and tell, you know, now you have to react. All of you. And maybe that's what the spiritual war we are living is pushing us to do, is to unite, uh, the, we, the people and humanity to say no.

I mean, they only can obey. They can only dictate us as long as we, there are people obeying. Yeah. So that's, that's my take. I'm, I'm, I was shocked and I keep on being shocked, but if I look at the higher purpose of this, of humanity, maybe it is necessary because they have been corrupted for so long and, uh, for me, the UN has been built for that.

And it's the only explanation why governments have taken the side of the United Nation Corporation. That's how I I, yeah. To make it short.

Wow. And, and as, uh, um, I, I mean, I know hoodie, uh, w was, was, uh, was trying to get across the, uh, the gravity of your resume. But I mean, just for everyone out there, 'cause I, I think this is so important when we get people on club grubby, uh, uh, quite often they undersell themselves and what they've done and, and the, it, it leads to the, the real importance of what they've got to say.

And, and I, and I really need to highlight this, uh, with you, Astrid, because, uh, you, you, you have been a part of this WHO, uh, set up for years. You've been part of the model of, of, of it being a success. You know, I think it's

important that people know a little bit more about you and your background, so that that really does, uh, hit home to people just how important what you are saying is.

Yeah. Yes, it is. You know, it's, that's always a challenge, uh, when, uh, some, I speak for the first time to an audience, uh, that has different levels of knowledge, of understanding. So, excuse me if I take shortcuts, but it's all backed up, uh, by science or by experience or political, uh, um, documents. Uh, and I have proofs of what I say.

Um, yeah. So from early on, I, in my life, I, I'm born, that's important internationally, uh, with a mother Norwegian, a father Swiss German in this, in Geneva. And so I was very much into the international aspect of life, and I wanted to work for the UN and WHO because I thought That's great. Uh, Switzerland is too small for me.

And, and, uh, so I took very quickly, uh, course at the United Nation when, uh, during my, my studies for my master of science, I was in WHO, uh, on, um, uh, diagnostic, uh, mental health diagnostics, intercultural Mental health diagnostics, where you show, see that mental health evaluation and evidence is not at all the same in different countries and different cultures.

It's a cultural aspect. So I, I was very, uh, in the, in the mental health and, um, uh, I wanted to work there. But actually to work there, you have to have an open door by somebody or you have to be, um, sponsored by your government. And I realized that and I said, okay, well then the university, uh, you know, I was in a multicentric, WHO research with the geriatric hospital and that's when I started with University Hospital Faculty of Medicine.

And after that, I, I went very quickly into university and the UN with WHO collaboration and as I'm fluent in, in English, they always took me in on board. And that's how I have been, I mean, all since I'm 28 years old, I have been in WHO, uh, finishing my master of science and PhD, uh, with, uh, the University in Public Health.

And I kept on with aging on the review committee of Ethics Research ethics. This is why I can talk to you how systematic fraud of WHO approved research ethics for the vaccines. It is just. It is just a, a, a horror to see that, uh, um, I have to say it now, uh, that a private sector would decide for the destiny of people and impose on WHO to not consider anything ethical, like the informed consent, uh, very informed, signed with a copy, uh, like conflict of interest, like, uh, paying for any damage, stopping the research if there are deaths, et cetera, et cetera.

So I was on ethics, I further director generals, and I was many times with them. They, I'm discreet, so they liked my mis so they took me in many meetings, like health in all policies, which, um, you understand now why all ministers and ministries. Are involved in health. You can argue that health is everywhere and needs to be in telecommunication, needs to be in education.

It's so, WHO grabbed so many topics that, uh, I was in social determinants of health. It's one of my last mandate was also with innovation, um, uh, consultancy. I mean, uh, so I have my whole life been and the biggest contract official working with WHO who was with HR from 2009 was the first invitation, and 2010 to 2000 and 2013.

And, um, after that I kept on collaborating for lectures. So just that people understand, I have always kept, um, and they always, uh. Spotted me out and took me back to WHO to help in different, uh, aging was a big part. Of course, that was my first, uh, I forgot to mention, but I also got a prize from Kanan because we organized the international year of older persons.

That was 1999. And I realized how not only WHO works, but how all the agencies work because we created the Geneva International Network on Aging, which I cheered still today. But I stopped all collaboration with WHO since 2016 because they were promoting Ana in old people in 2016. So, uh, I realized that, uh, they had put at the head of aging somebody who had not a clue, but was there for another agenda.

And I said, we cannot work with them anymore. There's something wrong. Um, so this Geneva International Network on Aging got me to organize un open days twice with all the agencies, but also to put aging in all

agencies. And this is how I cannot, I can talk to you not only about WHO, but I've had mandates with unap United Nation Environment Program to make, um, a secondary study and assessment of Yale and Howard on the fumes of Iraq, war on people and animal health on the ground.

And I did not dare to talk about it because it was secret. Now I don't care anymore because it was a united, uh, United Nation Commission on Compensation. And Yale and Howard had had said no. Uh, nothing happened. Nothing happened. And I mean, I, I read the reports of, of the country and it was horror, so I, I just contradicted them completely.

But also the International Labor Office, we did a lot of lectures there, so it's. When I make a, a lecture and even, uh, I, I can do one here also, just half an hour presentation for people who really want to understand with slides. It is a big, big octopussy with many tentacles. Uh, the United Nation is so huge.

It was small at the beginning. WHO is small at the beginning, and today it's become something uncontrollable. Just to give you an example, they are, uh, training, they have a robot ambassador Sophia, uh, for mental health. So if you want a mental health consultation, you need to go to Sophia Robot. You know, things like that.

Uh, it is, or they have this education of transgender, they're promoting, uh, masturbation in children, in, in schools, everywhere in the world. So, uh, I want to show people how it, I really believe that it's great to be united. It's a fantastic for humanity. Uh, until I, it was increasingly. Weird. Also at the academia, I must say.

They posted people who had interests in vaccines very quickly and in, uh, WHOI only realized this in 2016 when I was in front of the executive board with my students from WHO and friends and, you know, people, I made friends here and we were having coffee in front of the executive board board in 2016.

And, and they told me, you know, what's happening now? And I said, no. I said, it's crazy. Uh, bill Gates with Gabby and Bill and Melinda Gates funding says he is giving more than any other country to WHO. So he has entitled to have a seat in the executive board to direct, uh, officially, uh, you know, uh, Avistan.

So, so, uh, you see how, how things turn, but we never imagined what's going on. I can see and discover things retrospectively. I. Like the global plan of vaccine of, uh, bill Gates of who was that, who is directing WHO from 2010 to 2020. Uh, I can just, and he still is, he's now taking over everything. It's true.

He participates financially more than any country. If you put Bill and Melinda Gates Foundation, plus Gabby, the Global Alliance for Vaccine Immunization, which is, which he had started long ago. Uh, in 2000, yeah. In with unicef and then, which was called the Institute of Depopulation, which is his agenda.

And then he, he came to Switzerland in 2006 and then 2009 had total immunity with this international. So

you, we prob we'll probably get that into that, uh, into the second half. Sorry,

I'm getting Yeah, no, that's all

good. Uh, to, to, uh, to tell. Unfortunately, it's, it's a sad old show this, uh. Uh, WHO. It's like a modern day death camp.

Um, there's just no doubt about it. Um, look, before we master, before we let you go, Katie, um, the Alliant Council of Australia, uh, we we're obviously very keen to, uh, uh, to, to, to move forward, um, and, and bring the public along with us and, and inform them about what's going on. And obviously, we'll, we'll have some, uh, initiatives, uh, in the next few weeks that, uh, we we'll put out on social media, et cetera.

But, uh, ultimately, uh, you know, we need to get in contact with the politicians, don't we? Uh, I, I think Astrid, uh, alluded to this, uh, in a meeting we had the other night, uh, that, that is so important that, uh, we, we write to these organizations, uh, the WHR, we write to all our politicians and just, uh, and, and say no.

Um, so we might come up with some templates or something for that.

Yeah.

Already done. I just wanna say it's very, very important at all levels to say we do not consent. It's also at a spiritual level because they're in a cult, and I have information intel from inside. It's a cult, this Rosu and Gabby. So it's important to say we don't consent to write it down.

It has an effect. Yeah,

absolutely. So we've got lots of initiatives. Uh, we do need to get Mark Butler to expressly write to, uh, the WHO and say, Australia does not, uh, accept the, uh, or does reject the 2024 International Health regulations. Uh, that is, uh, extremely important. Uh, we are encouraging everybody to write to, uh, Mark Butler.

We've got template emails and letters, uh, letters to politicians, especially with our new government because of course our new government won't be sitting before, uh, the 19th of July. Date. So it is really important to get correspondence out there to our politicians, but also to make your, um, you know, people aware of this.

Ask them if they know about the WHO, uh, and it's not a band, uh, and what they're up to, and particularly around the regulations. Let them know that there is a deadline coming up the 19th of July. There's everything on our website, aligned Council of Australia, uh, dot com au. We represent, uh, the interests of, um, almost 2 million Australians because there are at least 2 million Australians that know about, uh, these pandemic treaties, and they are concerned about the ramifications of them.

Sign up to our email mailing list. We've got weekly emails going out, or just jump onto any of the socials. Uh, and you'll be able to see a whole lot of our, uh, memes and campaigns going around at the moment. Myths versus facts. Uh, what the relevance of 19th of July is and what it means. Share it, talk about it, you know, uh, do it while we still can.

Oh, we've got a month left. I have

a question. I have a question to Katie. Uh, yeah, I, when I, the more I look at this, uh, the more I, Australia is part of the Commonwealth, uh, how do you, what, what's the name of it exactly? Commonwealth countries. Commonwealth countries. And there, there are tribunals and there are things that can be set up.

I think I, I just sent you something. So should they also write, uh, and join with the Commonwealth to somebody who is heading this Commonwealth? Uh, as, I don't know if it's a Commonwealth Association group, because it seems that everything is going from them down.

Yeah, I think it's still very much a state member, uh, driven initiative with the World Health Organization.

The 194 member states all have a say in a vote if they've paid their bills. Uh, and so at this stage, very much as a a, a move with Australia, we've made similar work or done similar things in New Zealand to get New Zealand to speak up and reject the 2020. Two irs. So it is a mem, I think it's still member states getting to sign up or not sign up.

But I do perceive that there is much more to be done. Uh, and I do know that there are other, uh, countries already looking at alternatives, uh, while not ignoring the fact that, you know, uh, health is a very important issue when the World Health Organization ceases to be about health. There's other, uh, groups and organizations that are setting things up.

Uh, our biggest defense partner, the United States, has obviously exited the WHO Argentina's making similar noises. Um, the, those countries leaving I think is particularly powerful. Uh, and that sends very, very clear

message. And the other thing is, we don't need to sign up to these. We can still just take the recommendations if they suit us.

You know, we are on a massive country, a huge moat, miles away from everything. We've got the benefit of letting a lot of things play out before they actually arrives on our shores.

Yeah. Great stuff. Katie Ashby, we're gonna take a break now. We'll say goodnight to you. Thank you so much for your presence and all the work you're doing.

I've, I think it's, you've been very instrumental in the decisions made against the IHR in, um, in New Zealand, uh, especially in your work with, uh, New Zealand doctors, SOS and other groups over there. You're a champion, Katie. We love you. We thank you for it and, um, enjoy the rest of your evening. Thanks for joining us.

Thank you so much. Have a wonderful how much

to watch. Great to sequestered. Congratulations. And I, I'm, I, I'll support you. Anything that you need, I will be there. Thank you. Thank you. Likewise.

Wonderful. Thank you. And John and I will be back with our special guest, Dr. Astrid St. Berger, straight after the break.

Thanks for watching. And here we are back, uh, for part two of this outstanding interview. John, we're really gonna impact some heavy stuff now. With our special guest, WHO, whistleblower from, uh, coming to us from Geneva in Switzerland, Dr. Astrid Steckel Berger. Astrid, uh, let's unpack some heavy stuff that you know.

I mean, first of all, I wanna, I want to ask you, have you felt threatened in any way because you're speaking out?

Yeah. It's, it's a question that I'm asked and, uh, surprisingly, uh, not that much. I, I've been, I felt the threat from France because I, at the beginning, I started, I was invited to, to, uh, a podcast.

It's more than a post a TV that was set by a former Sarkozy. I found out after, uh, guy and, uh, Antoine and I, I realized after I, so I did a, a health program and suddenly when I said that in September 21 that any director of the hospital or the school that vaccinates children. Uh, should be condemned and taken into the street and being shown to everybody, and it should never happen again.

I was so poof, you know, that, uh, all the newspapers in France had, she is violent because I said the guillotine, uh, how do you call that in English? Is it guillotine? Yeah. I said the guillotine is too easy. We have to show it to everybody who they are. And I, I, I told, I said it lightly, not aggressively, but all the newspaper got that word and ka and I, then I stopped every activity there and I did not go to France for a year at least.

Uh, I, I felt it in my guts and, uh, that, but in Geneva by people in the un I did not feel, I actually sometimes feel protected, of course, spiritually, but, but, um, I had, you have to know one thing in 2020, I was in the short list. To be the independent, un independent expert for, for Crimes Against Humanity.

And it's, it's the Middle East countries. I have the lp, Yemen and Saudi Arabia for the Yemen war. And people, the countries started to like me and said, we would like her to be on this. So I was in the three last ones, and I could see, see people, you know, who was kind of protecting me. And I thought, yeah, there is not only spies that are nasty, there are also people who protect you.

So thanks God, I didn't get it because I, I don't know what, I couldn't have done anything. Uh, but who got it? And that's just to show you the corruption. Is that the head of the office of High Commissioner of Human Rights? Was has been, uh, Dr. Bley, a pediatrician from Chile, and she came back and was reelected, which is unprecedented at the office of High Commissioner of Human Rights.

And one of the three who were three was from Chile. And of course they took the Chile expert. So, so, um, there are independent experts that are very good. There was a Swiss one that I saw for the Psychotronic, uh, armament, you know, for, um, uh, directed energy against people in the brain. And so I collaborated with him and he's actually now writing a book.

Um, so there are good people, but now the grab is the whole United Nation for me. Yeah, so that was why I don't feel that threatened. I'm careful, and I never mention names except those that everybody mentioned. Um, I know that for example, I know Klaus Schwab, I've been at the World Economic Forum with religious leaders to, to this, that's my destiny because I was, uh, one of the coordinator of the UN Summit for Religious and Spiritual leaders in the, in New York in 2000.

That's not in my cv, but, um, but so I know Klaus Schwab and I, he was even, uh, in my office, uh, in, I was in his office when I made my book on, uh, anti-aging regenerative medicine, which had parts on the danger of transhumanist and which is their agenda. And he was very kind and he explained to me why he was not professor and he was kicked out of the University of Geneva.

And so I know those people and they have, uh, been collaborating with them and suddenly. They turn into their evil face and I'm like, whoa, is it possible that he can do this? And I mean, I, I can't believe I, I have, and I have some doubts sometimes if they have not been taken out and there are, um, actors, I, it's very difficult.

I dunno if you also have this, that, you know, some politician people, and suddenly you find out they're part of this and, and humanly you go, but how could they be like this? Are they, is it, is it really dumb?

How did they change that quickly?

Yeah. So I, I'm, no, I, I'm trying to navigate, uh, cool. I'm not, I'm, I don't have a lot of money, so that's good.

I, I try to take a lousy car.

I'm not, and I, I'm very careful with the, uh, people coming to flirt me.

Yeah. John, you, you, I know you've already had some time in the last few hours talking with Astrid, uh, in your capacity as chair of the a CA. Hmm. She's revealed to you some startling stuff. You, you told me. Absolutely stunned you. I, I think it'd be really fruitful if you, uh, illuminated some of that with Astrid now for our viewers.

Yeah. Thanks Astrid. I, I mean, you've described the WHO as a, as an octopus. Um, could you maybe give some insight to the viewers on, on, on the background of, of what, how, how, how all this has come to fruition, where the Bill Gates of the world fits in here and, and the Garveys and, and, and, and what's been the, the timeline and, uh, what's all led up to this?

Well, the, what is very puzzling is that you have to go back, uh, in history to understand. Where this comes from? What is the cause of the cause of, of their behavior, of how come today, uh, Gabby is directing WHO, uh, for example, and other, I mean, you know, when, when I was, um, giving lectures on the United Nation, I showed this huge graphic that everybody can go and look at.

It's, uh, graphic, the United Nations system, and you type that and you put graphics and you can see it. It's huge. And that's one of the first slides I show to. So show where is WHO? And um, so how can, how did he manage, uh, to get into there and why? The WHO and one answer is simple, WHO because it's life.

It's it's life. And what they want to do is depopulation his family. Bill Gates comes from a Fabian society. Just type it up. It's a eugenics.

Eugenics. Yeah,

eugenics, his pirates and his mother, his father was, uh, eugenics and his mother was in reproductive health just by chance. And he is in computer viruses, so, and technology you see.

So, uh, and his first institute was not Bill and Melinda guess, but the Institute of Depopulation. And then he changed because, uh, he shouldn't show his agenda. And then. He went into unicef, one of the first children. So you see that a depopulation, of course you start with the children, it's the future of humanity.

And then you go to what touches most people and it is the war and death, life and death, which scares most people. It's not war, it's li life and death. It's so, I think they, it was the open door, WHO in the whole system is the open door to go to all the health in all policy. And I took this course with Elna Kush, who is the woman who created, uh, the first draft of the pandemic treaty.

When I saw her name, I was like, oh, of course. She was so weird in the aging. She was already in the aging. Um, uh, that was in two 1990s and she already was head of. The health promotion program and aging was under her. So I had meetings with her and each time I speak she was nervous and I could see her f feet go all over.

So I thought, what's going on with this woman? And now understand I was not on her agenda and she was taking care of Mega Cities Health in mega cities. And I, I couldn't understand, I said, why Omega cities? It's not a priority. But, so you see that in WHO already in the nineties they were creating departments and some just, uh, to look good, you know, like traditional health was very small.

I was very interested. It was just beside mental health. There was only one doctor, Dr. Han, I don't even remember him from India. And so there was only a small department. And today, forget it, there was Chinese, he doesn't even talk about it anymore, but they were already had their agenda starting to be set up.

So that's the first thing. Uh, second is that the NGO world is not what people think it is. It's called non-government versus governmental for member states. But I found out because I was also representing academic NGO on my spare time after I, I was known there, they asked me from the us I said, okay, I can give it a try.

But it was very interesting. Uh, I, I realized that, and in the course I had the, the Gogo, the bingo, the won go, and I dunno if you know this, but the bingo is, is, is, is Bill Gates because he, he's supposed to be an NGO non-governmental and it's a business interested NGO. We could add eugenic interested NGO now because really, so they were business interested.

There were, um, like, uh, the Clinton Foundation, like Carter Foundation who are today, I saw them in the list of the partnership members. So you see they're all back. Uh, they have created the bubbles and they come back. Uh, and then, uh, there is the won go, the associations of associations like the Association of Mental Health and Psychiatric Associations.

So they have all the, the countries mapping of all the Association of Psychiatrists in the world. For example, you see the, the, the mapping is a military strategy. And so the won go, the Gogo bingo and what was the other one? Uh, yeah, the Bingo. Also the business interested are all into humanitarian health.

Uh, yeah. They were all into humanitarian aid and I, I put my nose into it, uh, also for Yemen, and they say that they give so much money and you never have the proof they're given the money. So we don't, it was non-transparent. So all this Gogo and government, oh, the Gogo is government, NGO, like usaid. It's typical.

And you see what they're doing with usaid. It's exactly the same with the whole, uh, family of NGOs accredited to the un. You cannot just turn out and have an NGO and be accredited. The academia was accredited to, uh, were two, uh, one geriatric ge uh, gerontology, but the other one was on, uh, psychological analysis of, of mental, of, uh, social issues.

And, um, all those, all those people are, you can go to any meeting. You have different levels, but otherwise you cannot just come in. So they're choosing you. It takes a long process. It takes three years unless you know somebody who will push you in, you see? So it's not just what you think it is. WHO is a long.

Uh, is a big, that, that put more and more, um, uh, departments. And one thing that shocked me also is that we never talked in HR of vaccines. It was in the annex as a prophylactic, um, tool, but nobody, not one expert talked about it like it was ata. They had, the rule was don't talk about it because it was, it, it should have been in IHR.

Uh, they deployed it. They, they created fear to deploy some, a fake pandemic not corresponding to HR at all. And they rolled it out. Yeah. So, um, that's, that's just to explain that the UN and WHO is, is a large octopussy and it goes far be behind beyond, because there are privileged foundation that can come and sit in any meeting like the Rockefeller Foundation, like the Vatican.

Observer, like, uh, they were changing always women's rights. They took off women's rights. So I knew the Nuncio and I went to him and said, can you stop doing this because you're not helping humanity? Uh, yeah. So, so yeah. So they meet all, every year, many meetings. Uh, the, the High Commission of Human Rights has, uh, UPR, the Universal Periodic Review of each country.

If they respect human rights, they meet with DMN, for example. I, I found that out. It's three to four times a year officially. And every other agency, or every, uh, issue is, um, meeting at least once for an assembly general, uh, like WHO. But they also have other side meetings to evolve, like WHO did with, uh, international negotiating bodies.

They met, I think, 17 times to implement this HR and, uh, implement, adopt,

adopt,

partially. Partially, I think. Yeah. So it's all this and the, there is a regulation that you find in every agency. It's always the same. But what is also completely crazy in WHO is the, the way to adopt anything like hr. It's Article 19 of its constitution and it is the only agency, WHO, where I saw the word constitution.

And it seems they have taken that word to confuse everybody on, on their constitution is WHO Constitution. So we always have to mention that it is WHO Constitution. Um, yeah. So this constitution, article 19 says that you just need two thirds of the votes of member states to adopt anything globally. And this is not democratic.

I mean, now that they have made it totally wrong and lied, we, we have to go back and read the text again and we see why from article 19. Article 21 is exactly what happened now, and they're, they're trying to make it implement the Article 21, if you read it, it's the business of products, of diagnostics, uh, of vaccines, um, of, um, definitions where, which they can change as they want if they have two thirds of the votes.

So I was, uh, shocked when I, I realized that the Constitution, which I had never read, is the tool of their dicta. And, uh, so I chart WHO Nstitute and it's the only con, it's the only agency who has a constitution.

You, you mentioned, now, I dunno,

which

you mentioned the Rockefellers and various other groups as well.

Have, have you, have you seen any evidence of, uh, Vatican involvement in all of this as well?

Um, it is very, uh, sly why they, how they do, because they, they select people. Um, that they are sure are on their side, like the opus de and other secret societies. And, uh, I, I could, I could see there were sitting like kings,

you know, in meetings and you know, the review when you want to change or make a convention, uh, or thing for women's rights, for example, or any document, a resolution.

They're sitting there and they read the text. The member states that are interested and the Vatican is normally an observer, but they sit and they correct and they correct on the screen. And then you can have the raw texts, which is in the un but you don't, it doesn't go out. So you know who has done what and that I realized, I was like, sure, I, I, that is not possible.

But they, it was very nice. The Italian nuncio that I, I knew best was very nice. Uh, it was then we had, uh, one, a former Archbishop of Ireland. I forgot his name. Very nice. But he, they're just obeying to the, to the global Vatican. Uh, what another, uh, in this I have, I was in a Catholic group of, uh, because I'm, I'm born Catholic, but I'm an international, uh, divine lover, I would say.

But, uh, that's why I like inter religion. I don't, I cannot accept that we say that we are saved, and they're not. I, I just cannot accept that. So, uh, yes. So I was in this Catholic international group for aging and helping them, you know, uh, to make, and they invited me to the, uh, Vatican, uh, world Family Gathering.

It's, it's in French and it was in Valencia. So I, I, I went, I said, yeah, great. VIP, uh, very, very good. So I was in the box. It was when Ratzinger took over. Uh, okay. And I went to the scientific meeting because I thought, I, I can navigate, I'm gonna look at this and. That I saw that the Vatican has a scientific council only man, uh, maybe one woman.

And, uh, they are deciding what is life and death from at the birth level. Uh, and they were discussing very strange things. I, I don't remember now, but I, I thought this is like a closed meeting. I have the chance to come in and there, those people have a political agenda. It's not just religious. Uh, so I, I cannot tell you more than that.

But when you meet in those, uh, groups, uh, the VIP there, there, you see that there is an agenda in research. They're cutting out this, they're cutting out that they say that we can talk about this. We cannot talk about that. And so I, that's the only, and this I have that they're everywhere.

Johnny,

um, the, the Garvey, uh, became a foundation, uh, in 2006, uh, uh, and then I think it was made into an international organization in 2009.

And, and Bill Gates has somehow rather got full, uh, immunity through all this. Uh, can you Yes,

yes. It's, it's, it's, uh, it became, actually, I, I knew that I, 2009 it became, uh, international, uh, uh, uh, govern no non-governmental organization. But the Swiss had made, and I looked it backwards in pro, you know, retrospectively had made an announcement that they had, uh, the privilege in Switzerland to welcome, uh, the Gabby and uh, an international ngo.

And in 2019, the Switzerland made another communique. From the government and said, we have the privilege, uh, to fund the building of Gavi, which is huge. It's 10 storage, you know, and then it has all the business of, uh, vaccine, uh, primarily and treatments and diagnostics and exactly Article 21 of the Constitution, uh, of WHO.

And they're just beside WHO and behind the World Council of Churches, which is another interesting, which, a very interesting block that doesn't have access to the un like the Vatican, you see. So the Vatican Catholics are not in the World Council of Churches, but they're very important. They have all the Christians of the world there.

Yeah. So, so they're very in a strategic position, I think. Yeah.

Well, well, uh, one of our guests, uh, uh, Trevor Loudin, who's, uh, who is an author, a New Zealand author, uh, living as an expat in New York City, wrote, is written very, very. Uh, interesting books on all of, of communist infiltration around the world.

We've had him on as, uh, as a guest a couple of times. Uh, he informed me just recently that the World Council of Churches, uh, through his research, was established by the KGB, the Russian kgb. So Really?

Yeah. It's strange because the KGB, I mean, the Orthodox Church is not in the World Council of Churches.

No.

But what you do, the whole, the whole idea of, of Communist and Marxist infiltration is first you demoralize the population, then you destabilize the population, then you normalize all that, and then you win. So part of the, part of the indoctrination process, first of all, it's get into entertainment like Hollywood infiltrate entertainment to make sure that they're, they're putting out the propaganda that you want to condition the people.

Demoralize, destabilize. Then you occupy the universities and you give yourself 15 to 30 years. Uh, to get the universities to start, uh, teaching students, uh, not to think critically anymore and, and follow these woke agendas. And, uh, and then the churches are the next part of the program because the churches involve a great many people, especially the Protestant groups in the USA, and you infiltrate the churches and you get the doctrine changed subtly within the churches, and it just suits the Marxist regime.

Well, the greatest enemy of communism and Marxism is Christianity. So you get into those organizations and that's why they founded the World Council of Churches. Uh, a lot more to be unpacked about this arid.

Yeah. I, I just want to mention, uh, as we are on, on the topic, uh, that I saw on this agenda of mapping all religions of the world at the UN Summit of Spiritual and Religious leaders, who was organized by Rufin.

Marketing agency, Jewish in New York, and they were collaborating and they were funded also by CNN Ted Turner. And there was also the Hinduja Bank and there was Ma Strong who is at the head of the Rio Agenda. And with the peace, uh, university of he, I mean, he's been all over the UN and he left to China.

So they were actually the, the, they were mapping at the UN Summit of Religious Leaders for three years to gather all the religious leaders of the world. And after that they were invited some selection at the, um, world Economic Forum where Klau Schwab was, uh, mapping all this. They had it all, it is the same network, you know, so it, what what is interesting, Klau Schwab also started to go to the World Economic Forum.

This, those last 20 years he, no, in China, um, sorry. He created forum in China. And there seemed to have been a movement there, uh, that could explain. I don't see any Russian in this, but China, I have seen definitely, uh, clearly, uh, in the agenda of the church. And you can see that when they rolled out the, the injection, I called the head of the World Religion, uh, association with who by Baja, which was at the head of this summit.

And I told him, please tell the leaders to not not vaccinate and tell the whole world. And, and I saw that they were completely trapped. No religious leader, even Satguru or, um, Dalai Lama or the Tibetans that I know who have head offices, uh, who are not the Dalai Lama group, the others, they all had the order to inject.

And I couldn't believe I said this is against anything. It's not an act of love like the, the Pope said. So I, that was for me, a turning point that they have mapped and taken years to map and bring together those big meetings that I had organized also to help them. Were just there to map every group in the world, which after that we're going to be infiltrated.

Mm-hmm.

I just want to share a screen for a moment. Uh, yeah. Because this is very much in line with what we're talking about. Um, so bear with me

and, and while you do that, I, I want to add, uh, something we discussed yesterday that the people listening should know that Gabby has signed illegally. I mean, we did not accept that in 2004, five, uh, after, uh, James Walson, which whom I had collaborated, uh, uh, he was, he was good.

Uh, they have signed with Ovitz World Bank, WHO, and Gabby. The I-F-F-I-M, the international financing facility for immunization or facility financing, uh, created by Goldman Sachs, and they are kind of using the bonds. I don't know how they do, if anybody who wants to kind go and have time to study an economist, what is happening in the I-F-F-I-M, it's still on and it's using your money.

So it, it started also in the two thousands.

And Ted Ross is on the board of Gavi, isn't he? Uh,

yeah, he was in 2000 just before he was elected. He was on the board with no signature. And Mary Robinson was, uh, 10 years before, after she left the office of High Commissioner. She was on the Gavi board. I, I couldn't believe it.

I collaborated with her. I was like, what? And she was also with the Vatican a lot. Yeah. So same group. And I can show you, you probably would, uh, recognize some names on the board if I sent you the, the 2006 one and the 2009 one. It's, uh, you can see it, it is transparent in Switzerland, so you can, uh, see who is on the board and who has signature with the time, the dates, everything.

Yeah.

Unbelievable. Um,

yes, so, so that issue with the tax into the bonds, um, that, that's obviously a, a, a way of them making money on the side. Is it what it,

uh, yeah, there is, you see, there are, people have an interest. Some people are trapped and cannot do any other way. Uh, some people are coerced or have been trapped in the sad, uh, pedal criminal thing.

Uh, but, uh, some people get money and their interest is just money. They don't look at any, so I think the way to pay them, because we have proof of contracts of European Union with Pfizer, it's probably with every country or it's maybe with the Commonwealth. They, they pay the, they, they arranged it so you don't see it.

Um, yeah, so they, they have to have a payment system. What, what better than have, uh, you know, bonds and things that nobody sees. If Goldman Sachs has created, it must be somewhere, don't you think? I, not an economist.

I just want to share screen very quickly and show you a photograph. Uh, can you see that okay?

Yes, yes, yes.

There we have a meeting of Pope Francis with all the world's religious leaders and who's in the background there, John?

Our very own mining magnate Twiggy Forest in his. Really? Yeah. Who

is it?

He's a mining magnate from Australia.

Oh,

uh, Twiggy Forest. Now what, what is Twiggy Forest doing in the middle of a group photo like that?

And who's the other one? That's not Greta there, is it?

No, no, I think that's, that might be Twiggy's wife.

I'm not sure.

What, what year is this? I have the, and I have the press releases with the wef after this religious summit. Uh, they created, they had the C hundred and the Archbishop of Canterbury was heading that. So they, they already had the gathering of religious leaders, but after this summit, they became C hundred is called like that.

And it was always the ship of Canterbury. So you probably linked to that too.

And, and look, the, the thing, uh, that people need to be mindful of here, uh, Astrid, is that the WHO never had, uh, any outside influencers did it. I mean, it, it didn't have any of these private partnerships. There wasn't the Bill Gates' of the world initially, uh, demanding a seat at the table as, uh, as, as like the fifth state.

Um,

exactly. It's illegal. It's a violation of the charter.

And so people are conflicted, aren't they? Every time they make a decision, I mean, they're looking after their own business interests, before the interests of the people.

Oh, today they definitely are giving orders to member states, and they're not entitled to do this.

This is a, a, what they're taking, uh, a place in the world with, uh, in the press. McKinsey actually is working for them. It's, it's this agency that never before it was like that. So the private sector has been paid. I have this from WHO Insider who are now retired or can speak and told me and gave me some data.

McKinsey since 2016 is paid millions to make all their agenda, their communicate in the press, et cetera, in multilanguage language, everywhere in the world. This was never. Like that. The coercion they are doing, attacking the misinformation is against the right of expression. The human rights of health, the human rights of mobility, everything is, everything that they have done is breaching and violating their own law and of hr, but also the UN charter, the Declaration of Human Rights and all the instruments within the un.

So, so this, it is shocking that they have taken stage like that in the press because they own it. The only explanation is there are a corporation and they own it. They own it all. They're not on our side. Member states are not member. They even call them parties sometimes. So they are the private sector today and they probably have signed to get those bonds, the corporation, the getting money paid by the higher, richer, and uh, they don't belong to us anymore.

Mm-hmm. And maybe would like to save the people, but they can't.

We're talking about fascism because the definition of fascism is government and corporations working for the common good. And that's, that's what fascism's all about. And that's what we're seeing at the moment. Uh, the world's changing. I mean, the ideologies of the thirties and forties and even going back to the turn of the century when Karl Marx first read his very ugly head has been global domination and we're seeing it played out right before our eyes.

Yeah. What's new is that it is global. This, this is, you know, one health, one government, one, one. Uh, and this is I, um, this is something that a lot of people don't understand. They think it is just them, or no, it is global. The orders come from a global entity. Uh, Rockefeller, by the way, changed medicine a hundred years ago, and he was standing in, in the aging group sometimes, and I said, what are you doing here?

And he was like, so he, they, they covering up always secret, non-transparency. But people have to understand it's global. What happens with education of children? You know, mistreatment, uh, behind the door without telling the parents is happening everywhere in the world. In Switzerland too,

we're looking at, we're looking at one world government, one world health, one world religion, one world currency.

Yeah,

nothing. One,

one Id one. Ai, I ai for all this is the slogan on the United Nation. ZA today, uh, they're, every year they have AI for all meeting. I went to one to see what it's like. I was not impressed, but, but what, because there were robots. There was Sofia and I was questioning them. I even have the video, but they're not showing really what their capacity.

And now it's, there is a meeting beginning of July, you can, uh, register online. It's, um, it's a digital for all for the World Summit of Information Society. Why is this? I was organizing that in 20 2002. So it's, it's much more technology than we think in transhumanist and ai and Well, that, that's also a very big danger that people should not be careful.

Yeah. With,

uh, Astrid, look, by any stretch of the imagination, you are a public health expert there. I mean that, that, that is not debatable. Um, what went on during COVID, um, the. The definition of a pandemic was obviously, uh, was obviously flouted by these grubs. Um, they've changed the rule book, the goalposts have moved.

Um, there's been no autopsies. Uh, you know, they haven't looked at other causes. I mean, the whole thing's just a complete mess, isn't it?

Yeah. Yeah. I made a, a graphic of coherence because I was thinking, you know, how can people make coherence of what happened? Um, and it's actually quite easy to make. It's, you have the first, uh, you know, if you make a timeline from 2020, even if apparently it's started before, of course, 2019, there were already, uh, groups who were, uh, had this, what they call COVID.

Uh, but, okay, so 2020, it was the creation of fear. This is for me clear, it's against I hr. I was in charge of the communication, uh, lectures, uh, with the anchor of CNN and, and, uh, we were doing, uh, simulations of, uh, in, in the workshops, uh, when we were residential. It was online and residential, and we were making, uh, exercises.

So people never, never make, don't create fear is the first thing. Second is transparency, then it is say, you don't know, and we are looking for things. And so it was so clear to me, and that's a IHR rule. You cannot communicate fear because you create panic and then it, it's exactly what they did. So for me, the first bubble was creating fear, creating lies, because there is nothing that corresponds to IHR, um, for, to declare a pandemic.

You need. It's impossible actually. They were discussing this, I think I already discussed that, but people know in 2013 when I was, uh, doing a workshop for the WHO Europe Eastern Block, they, they had to do exercises and

make posters of how they, they would, they would manage this. And beside me there was the, we were discussing with WHO people were there from the headquarters and they said, we cannot use pandemic.

Because up to now they had six pandemic level, I mean six steps until you could get a declaration of pandemic. So it is not just in one in two months. Um, and this woman said no, because Taja Istan has sued WHO over H one N one because they have bought millions of Tamiflu. On the budget of the country and WHO declared the, oh no, it's finished.

And they had all this stock of Tamiflu, so they sued WHO Tajikistan, and that's not known in the press. And uh, and it was a very good example to show that dictatorship is not working and is, is, uh, not working financially or with people. So they adjusted. Now you see, they adjusted and they, they corrupted the heads of states, so they would never say that and they would pay them in the back with bonds or like, like, like that.

Yeah. Um,

I'm, I'm wondering if it might be possible, because I know you've got a lot of really good graphics.

Yep.

I would really, we would really love to have you back on in a week or so to do a full presentation with all your graphics. Is that a possibility?

Yes. I think it would be easier also for people because, uh, they would understand systematically things and a graphic is always very useful.

So I, I can do just say it now, but uh, uh, I will show it to them. And it is, it corresponds really well. 2020, creation of a virus that was never identified. And the virus that is changing and mutating is a flu. And there was no flu in the s and there was only what they called COVID. Some, you know, it, they should have called it stress cough.

Two for the least. And I met, wrote an article on, that's Ru Cov two and First Cov one disappeared after eight months, 24 countries touched. And it's a, it's a just a flu. So creation of fear, creation of what they call COVID, uh, which is probably a code for something else, uh, to keep on the trigger word of fear with COVID, each time you say COVID, people jump, you know, so it, it was really a programmation of fear, constant fear of something deadly, which is not deadly.

Uh, professor Ez showed that there is no more deaths in many countries in 2020, so. Creation of fear of the words, of pandemic, of the whole, uh, theater of words to roll out the vaccine in January, 2021. So 2021. Second timeline, the program was to roll out the vaccine and vaccinate as many people, as many people.

It is an experimental vaccine. They never mentioned it afterwards. And not only one experiment, they, they, you know, made shots on and on up to four super dose on the experiment. I mean, you know, it's because of fear. I think that this programmation of the first year and of all the other subversive, um, uh, you know, uh, uh, programmation of other things, of vaccines in, in the faculties of medicine, of corruption, and we're preparing all this, so 2021, the rollout of, of this, uh, vaccine.

And then I discovered, and I, that's what I put in the graphic that, uh, uh, WHO had the agenda of genome editing and of, uh, ID digital, uh, vaccine. And it was, that was in August 21. And I started to be alerted and I said, what the heck is that? And they had this genome editing, um, documents, and I have pictures in my slide, um, distributed to.

At all levels, at the level of the national, international, but national country, uh, to the head of the epidemiology, et cetera. So yeah, that was, yeah, very good. Yeah, it's exactly the same in 2020. Yeah. Except there, there is no flu. And the problem that we saw, and I cannot list how much corruption there was, is that we know that doctors

were paid to put the vaccine, the, the COVID, not only the vaccine, but the COVID, um, label would PCR tests, which is illegal.

It's a lab tool. You cannot, and I always mention, I, I'm expert on many tribunals, so I have a 10 page or five that demonstrate. That, uh, the CDC said, you cannot use this PCR for managing an epidemic or pandemic. Then you have WHO who says you need a doctor and the PCR. And there was another, uh, document and Carrie Mullis, the head of the Nobel Prize for PCR also said, you cannot use a PCR outside the lab.

You have to know what you're looking for. So the PCRI spoke on the Swiss radio and with the head of the lab, and it was impossible. We don't use tools like this in public health to make diagnostic in public health. It's, you don't prove that you don't. You have to prove that you're healthy. This was a whole thing.

Now, it's like if people are not healthy, if they're healthy, they have to prove they're healthy. That's what they wanted to. So 2021, they did that. They started to roll out genome editing, so everybody had to give the genome and the idpa and they wanted to go on and roll on their AI transhumanist agenda.

Then they started talking of smart city. So I put 23, 24. Smart city ID grid, uh, EMF, electromagnetic, um, disruption, uh, infrasound. Now we know there's even infrasound with, uh, the windmill thing. And so the rollout for them is very clear. And at the same time, there was censoring truth, censoring scientists, and I could see waves of crimes and waves of censorship from, uh, autumn 20 20 20.

It started the censorship even in our movement, actually sometime.

Yeah,

I was censored many times because I, I disclosed, uh. In public health, you disclose, you, you present the research of people that are, have the criteria. You, it's not you, you are helping the experts. You choose for public health. And there were so many reports from Quinta Kum, KRA, professor Arne Burkhart, uh, even Robert Young, uh, who showed there is nanotech, there is a, a chip in the vaccines, there are metals, there's chrome al, that's, and there are parasites.

But what is very interesting is that a Canadian, I have to mention that before I forget, a Canadian, a Dr. Nazi said suddenly I have tested phospho and nitrogen and there is to have life and call it biology. You need both. There is nothing in the vaccine that is biological. And for me, this is a turning point.

It means that what we are facing is Bill Gates technology nanotechnology expert. Uh, no, he's not an expert, but he pays, and it is not a biological virus. It is a nano tech virus. It's everything has to be looked at. If they inject a chip, if they inject oxide, graphene oxide, that is a emitter receptor, can stock information.

They can manipulate people from a distance. And DARPA knows that. And I found this video, please, people who don't believe this, look at YouTube, uh, the, um, uh, the war, the Neuropsychology of War by Charles Morgan. And he, he says, yes, we growth in oxide. You can, um, direct a monkey who is in Australia from Switzerland.

So, I mean, you see, we, we, I'm, I've gone, gone very far in my research and I have the, all the people I know in my network. There are very good people in Australia also, Dr. Nixon, for example. But there are many others, um, uh, that have in silence are keeping on studying what is going on, and we put everything together and their agenda is rolling out.

And that's why stopping this eye choice and talking about it is so important that people don't touch anymore their children with any injection if they can or otherwise detox.

We can't, we can't let you go this time. We will have you back next week, please, but we can't let you go this time without asking about Rhino Fick.

Oh, yeah.

What, what's happening with him now where, I mean, this is a, this is the most dreadful case of legal abuse you could ever wish to imagine, John. We thought Julian Assange was bad and it was. This is in that league. Tell us what you know about, uh, rhino Fick at the moment.

Well, I met him, uh, because somebody gave my name to his, uh, coroner Altus.

And I, I had, uh, I was called to talk about WHO and Bill Gates, and nobody knew that Bill Gates had total immunity and was wanted to be part of WHO. And he's still head of WHO. They, they elected, uh, Ted Ross, by the way, without consent of the country. So it shows you the private sector has taken over. Um, uh, yeah, so, so Reiner, uh, when I, I did that, he had his, uh, three, uh, colleagues and I spoke, uh, twice, uh, in the first years, uh, on WHO, but also on their system of how they wanted to log down and do, you know, with, in, in the country what was happening with Cepi and other mechanics, they always have grids of grids and they have, uh, Ponzi schemes, you know.

Ponzi schemes, but that work. Yeah. So, uh, um, and then, uh, I was part of the grand jury on day one and day two on day one with, um, uh, another person who has made her PhD on hr, uh, I can't remember all the names anymore. The, for, so the first day and the second day was on PCR tests. Uh, and then it was rolling out for a week and it was fantastic.

And they taped everything. They made it a little brochure. So I thought he was, and I was in his group and he said that we have to go to the International Court of Justice and blah, blah. And I started saying, it's not possible. We, you can try, but I don't think it's worth it because, uh, it's already occupied.

It's not possible that WHO can act like a bad kid. And nobody says anything from the International Court of Justice that manages disputes so, uh, against for countries. So he, he then started to go in other ways and. And then he was, I dunno if people know that, but he was one of the biggest incredible lawyer who, uh, won cases against Volkswagen de de, which is so difficult.

And there he was going against, um, uh, he was also talking of the, the PCR. He did very good points. That's how I, I met, I, I saw how, how good he is, uh, with Roston from the charity University who was a PCR, propagandist and, uh, Tedros. So he made I think about 400 auditions. Uh, you know, people who invited and then he got betrayed.

I had, was in court to talk with WHO Israel because WHO Europe had, we had a meeting in Israel, which is unprecedented, you know, and they call me and Rhino was not there. And I said, what's going on? And Vivian was there, in and out and I didn't know what was happening. And I saw three days later that Vivian Fisher and V Gong, uh, V Gong, uh, what's his name?

Uh, v who was in the H one N one in Europe scandal. He, they kicked the, they kicked Reiner out of his own tribunal, his own, um, uh, corona his, his, uh, his group of comedy. And I was so shocked. I thought, what's there is a betrayal. There was a clear betrayal. Then he created the International ICIC International Committee of Corona Alius because he started to disclose, uh, nanotech.

I said, you cannot not, uh, invite people who speak of, uh, much more than just a virus, because Vard was for the virus. So he was paid. And we know today in the tribunal where he is detained in prison, that that V Dart, Vivian Fisher and the two other lawyers have been set up by the German government already in 2020.

Can you imagine? He started in 2020. He was with betrayed treaters. There's, there have five steps in advance on us just to show you what's going on now. So he created the ICIC. He started inviting everybody, and he was, he's incredible. Uh, um, he, he, he manages to bring, you know, with a lot of coherence, all those topics together.

He also invited George Esco from United Nation, who, who, uh, tried to be president of Romania, who explained from, for a diplomat. He, he took risks because he explained much more than anybody there to do. So, and then what happened? Uh, he was probably going too far. He had to move to, uh, Mexico because they stopped his asset in California and in, uh, in Germany.

He had a house in Germany. He had a house in, in, in California. They, they stopped and took his, his belongings and they accused him of embezzlement. When he had, uh, we, they had made a, a common fund, uh, with all the donation and they had given it to. A lawyer called template who actually to this day keeps the money of Riner of, uh, the funding, but also the, he sold his house, uh, and he's holding his money.

So they arrested him illegally in October, now 18 months, 23. In October 23, he was in, uh, in, um, Mexico with his wife Inca, and he had lost his passport, so they probably stole it. He had to go to the embassy. They said, yeah, come back. Uh, it was in Mexico, uh, come back. And, um, he made the papers to get a passport and they said, come and get the passport at the airport because the embassy has, uh, of Germany has a problem, uh, uh, the of reconstruction or renovation of their offices.

So he went to the airport with Inca and they arrested him. And they detained him because they are on German soil. So they arrested him with the complicity of Mexico, which is illegal with no warrant. And they kept him. And then I think they kept him a few days, then flew him, only him, uh, to Texas and then to, um, Germany.

And he was detained with no warrant, uh, illegally, uh, um, he started to handcuffed and no lawyer. So it was in the prison of Ros Dorf, the highest security prison of Germany. And to this day, he has been preventively. Oh, he was detained preventively. You can only do that for six months and over six months he, they started even to start torture him and, and, uh, forbid him to go and see his, uh, his mother dying at the hospital.

Uh. Unless he would take handcuffs and chains on his feet. And I mean, everything was wrong. And they, they also did not accept that his doctors see him and they put him insulation. And that was on the day after six months when he should have gone out on his birthday in 5th of May, I think it is. And there was one of the first round of, uh, of, uh, tribunal hearings.

Uh, they accused him of having, um, some devices that, uh, on him. So they strapped his clothes off, put him insulation, and they didn't let him have his birthday. And they made an operation of psychological terror on him, which is in the United Nation. And that's where I come today because after the trial has been finished, everything, we tried many ways to get him out, take him out of the system of the fraud of name.

Do Dore, Cal Hill. And, uh, it was too difficult. The wife said it is. She's worried that it would, um, harm him because if you get out, then no T tribunal can arrest you, but there are Nazis. So that was the first step. The second step was to say that this is illegal and to make big posters. And finally, I thought last year, no, we have to try the un.

Anyway, there is a committee on arbitrary detention. There are independent experts, uh, that we can, uh, ask. Uh, there are, we have to make a buzz. There is a unfair trial, uh, unfair arrest, uh, illegal arrest, kidnapping because it's called kidnapping with, uh, and here is torture. Torture and inhuman treatment.

And even Rhino himself has written what he is is living. So we are helping all we can that we don't forget him. That's the number one. Because I was last year, 1st of June in front of the UN against the HR and treaty, and I spoke about Reiner and said there, there, there was a bus food Assange 10 12 lawyers against WHO, not one mentioned RiNo.

And I know now that they are betrayers, even outside the prison of Reiner that don't want him to, to silence him. So we are against a war of, he's so, he has so much, uh, central, um, visibility for creating an international tribunal of the people that, uh, he's dangerous and the Nazi want to hold him and they don't want us to talk about him.

So we started with Virginie and Dexter from South Africa. Lawyer from the grand jury, the ones that, uh, have not betrayed him to, to create documents and to, uh, we send it to Reiner to sign for arbitrary detention. And his lawyer took our document and contacted somebody in the UN who is retired. And I had a talk with him and he, he is, he is a set up.

He, he was lying. He was lying. And he doesn't know what he said. No, we cannot file for torture. He doesn't know the definition of torture. Torture is only to put chains on the feet is torture. To put him in isolation when it's unfair is torture. The psychological terror is torture. So he is set up. He, you know how I know he was lying.

It's crazy. But if it happens to you, he, he, uh, changed a meeting at the last minute and said, oh, I forgot, I'm in south of France so I cannot be in Geneva. He had set a meeting with me. Geneva on a Friday at six o'clock. At quarter to six, he says, oh, I forgot I'm in France. So I was really suspicious. I thought Kaia Vermer has called him, but on his glasses.

I said, so is it sunny there? And I could see, uh, that there were clouds on his glasses. He had, uh, optic glasses and on his clouds there were not on his, on his, uh, glasses, there were clouds. And he said, yes, it's very sunny and there was no sun. And I mean, we are with a group of Nazi around Reer that is, is very dangerous.

And now they changed him prison. So he's going from R Dorf to Brem Ward, which is we near where his mother died. But I don't know if it's a worse prison or not. But they did something because probably they're threatened that we could find a legal way and. They're destabilizing him, but there is a group who is standing in front of his prison every day.

So now they all have to move to Bremen. Um, so today what we can do is pray, number one, because there are really bad people around him. Even I don't trust his lawyer anymore. And, and, uh, he, and also they set up some media like bam and essential news that are going with the narrative of what they don't want to say and what they say.

So I think we have to talk about it and see if we can, um, find a way. I ask a military, he said, we need to extract him. And I said, no, that's too dangerous. I mean, they're, they're, uh, they're mad. So I think we have to be patient. But, uh, keep on talking about him. And if you, you, every group in the world starts telling.

Uh, we also wrote to your, um, prime Minister who helped Aung out. You know, he was very, uh, important in the Ang Liberation. So you have also, you know, try to see who you can influence. And if you have any idea, I can give you all the documents. Have, don't

expect anything from Anthony Albanese.

Okay.

Afu concern because, uh, Albanese would've done that for pr, uh, for Assange, but he won't do anything.

He won't do anything to unleash, uh, rhino Fick to bring out the truth that would unseat Anthony Albanese. So that's a, that's a faint hope, but, uh, you know, there's something. But

thank you for telling me that because you see, we don't know and. I'm, I'm working with some other people who said, yeah, yeah, it's good.

I said I may, may it's even worse because

they see he's, uh, he's part of the cabal. Uh, the first thing that Bill Gates did was meet with Anthony Albanese when he came here.

Oh my God. Yeah. Just then we went right

into the trap of the bad guys. Yeah. Shoot. Sorry.

Look, we've, we've gone way over time. Astrid.

We need to bring it to a halt, but we will convene next week. We'll, uh, we'll liaise with, with you on that. And if you could get a presentation for us, because we could unpack this for weeks. Yes. We have a wonderful guest. Um, so we might, we might close with a prayer if that's okay.

Yes. Uh, please. I'll put Rhino foolish in the prayer.

Yeah. Dear Lord, father in heaven, we have been talking about a wonderful man who's stood firmly for truth in spite of incredible threats and great odds who is now detained uncharged and, uh, untried father God in the most terrible circumstances. So as he is in solitary confinement, wherever he is, we pray that your Holy Spirit will be with him.

We pray that he will know that there are people out there who love him and want him free, and that we will all do the best we can to re to have him released and restored in humanity. Father God, we pray for this dreadful world that we're in. We pray for governments to have courage to actually say no.

And we pray for governments to be, have elected representatives who will also turn down bureaucrats, who will also come out and say, we need to act in accordance with the people. So Father, it's a mess. We can't do it without you. We thank you for our guest, father God, and for her honesty, and we ask you to protect her as well.

In the special name of Jesus we pray, amen. Right, uh, Astrid,

just finally, Astrid, can I just finally ask one, one quick question. Just make it very brief, but, uh, I mean, you speak four languages. You're across lots of cultures. You're very well educated on history, obviously. Uh, do you think this current day, uh, scenario that we we've been involved in the last five years is the worst atrocity in modern history?

Does, does it, is it worse than Nazi Germany?

I think Nazi Germany won the war and has infiltrated all the governments. Now, for me, it's clear that they have always been there and just preparing their third world war if they can, to eliminate us. But, uh, I, I have a very strong feeling that it had to happen.

Uh, when it happened, I was like, thank God, finally. I know why I am here. You know why you are here. This is, uh, it is apocalyptic. It is, uh, enormous. It is, uh, beyond what we know. We think the more I get into it, the more I see how cra it's, it's much bigger, it's spiritual. The CERN is, is, you know, asking entities to come in.

I have proofs from the research director. Um, so I think that this, the fact that there are so many who are spiritually, uh, strong and protected like that, but that this is going in the right direction. Even if it looks like it's not, I, I feel it and I see that this is necessary, that we are pushed and those who choose not to, it's their right.

But we have to just inform them and try to be with them. Yeah, the biggest humanity we can, they're not human. There's something completely off with them. But yeah, so, no, I have, uh, I have hope. Uh, I am. I think this year is probably the la the worst, but I hope that's true and, uh, we, we have to keep in the long run.

Yeah, that's, we lost.

Yep. And we, we, uh, RH Ick is a friend of this program. We interviewed him three times and we interviewed him sadly one week before he was arrested. And he was talking about the issues he was going through in Mexico and having to have his dogs brought down by a friend who, who met him at the border.

And, um, we just can't believe what's happened to him. So it's something, John, we need to keep following up now. We need to ramp this up. Yeah, I think, yeah,

and you can send, uh, we, we will give the address so people can send him, you know, nice letters and I know he, he appreciates our actions. He, he, he is in a way or another, he knows he can see things.

So I'm sure he will really appreciate, you know, your prayers and Yeah. And I will talk about it.

If you could, uh, please let us know that address. We'll make sure that he gets some, some messages from Australia. Uh, Johnny la you've often been heard to say you just couldn't make this stuff up. No, you couldn't.

Stay outta the trees. Everyone. Don't forget, uh, if you love your country, stand for it. Whether it's Germany, Switzerland, Australia, America, China, whatever. If you love it, stand up for it. And if you love peace, live with compassion. Get behind those people who are doing the best they can to bring truth to light.

God bless you all and we'll see you next time on Club Grubby and Astrid. Once again, Astrid St. Stackelberg, you've been absolutely incredible and we'll have you on next week. We thank you for joining us. Thank you.
