2026-05-13 - Club Grubbery - Sanator Ron Johnson

Graham Hood: [00:00:00] Well, good morning everybody, and welcome to another episode of Club Grubbery, and we are graced by Senator Ron Johnson, Republican senator for Wisconsin in the USA. And, uh, great to have you with us. Thanks for joining us, Senator.

Senator Ron Johnson: Thanks for having me on again.

Graham Hood: It's great to have you on again, and we have been watching with interest, uh, a lot of YouTube clips with you in, uh, in the, um, in the committee hearings discussing the, uh, the warning data and the VAERS system, and it would appear that that system has been compromised.

Graham Hood: The information you presented was that there were clear signals, warning signals, at the very beginning of this whole drama that were ignored for some reason. What can you tell us?

Senator Ron Johnson: Sure. Th- th- this is a bombshell revelation. I mean, this [00:01:00] is a blockbuster that the mainstream media here in America, the legacy media, is radio silent on.

Senator Ron Johnson: They've, they've completely covered it up. I, I actually was scheduled to go on CNN last week, uh, in the afternoon, sent them my report, and they canceled the hit. So let me describe in, in, in reasonably good detail, but still summary fashion. Uh, th- this is all the result of, uh, Bobby Kennedy's commitment to radical transparency.

Senator Ron Johnson: Uh, he, he... We were not getting cooperation of people inside the agency, so he finally said, "No, just give him the information." So we got a 11 thou- 11 million page data dump, and I, I gotta give my staff all the credit in the world for picking these needles out of the haystack. But what they uncovered, and, and, and here's the story.

Senator Ron Johnson: On March 1st of 2021, this is less than three months after the Pfizer and Moderna had been given emergency use authorization, they were starting to be administered primarily el- elderly. March 1st, [00:02:00] Peter Marks, the head of the division, CBER, that approves vaccines and also

sur- does the safety surveillance to make sure that what they've given authorization for, that, you know, there, there's not, uh, uh, any safety signals appearing.

Senator Ron Johnson: Uh, he was briefed by the, you know, data specialist, the data mining specialist within FDA who was working with the inventor of the algorithm that analyzed VAER data. Now, the reason they need a sophisticated algorithm is because normally, you've, you've got on average about 280 deaths per year reported to VAERS associated with some kind of vaccines.

Senator Ron Johnson: That's kind of the, sort of the background rate. You know, people have anaphylactic shock. That's just, you know, that's part of the risk-benefit ratio, right? Mm. Well, in 2021, we all said over 21,000 reported worldwide. Yes. But when you look at a, a pr- pretty low background rate, you need a s- pretty sophisticated algorithm to, to pick up slight little safety signals, right?[00:03:00]

Senator Ron Johnson: So he was warned, he was briefed on March 1st that the, that current algorithm was going to hide or mask safety signals, you know, primarily because you had two different injections, Moderna and Pfizer. They're very similar, and when you compared Pfizer against Moderna or other vaccines, you're gonna mask the signals.

Senator Ron Johnson: When you've compared Moderna to Pfizer or other vaccines, it's, it's gonna mask it. It's kind of pretty obvious, okay? Uh, so he was warned that that current algorithm that they're using to analyze VAERS was going to hide safety signals. 26 days later, that same data mining specialist working with the inventor of the algorithm came up with a state-of-the-art algorithm and did a run that they presented to sen- senior FDA officials that showed 49 cases of extreme masking, extreme hiding in the old system, and this one revealed 25 adverse events, including sudden cardiac [00:04:00] death, pulmonary infarction, uh, Bell's palsy, different forms of stroke.

Senator Ron Johnson: Uh, for three months after that, they continued to do these runs. They kept providing more data of more safety signals of things like, uh, uh, different types of sudden death. And instead of pinning a medal on their chest going, "Thank you for bringing this to our attention so we could warn the American public, the global public," they shunted them off to the side.

Senator Ron Johnson: They, they told them, "We didn't ask for this data. We don't want this data. We're gonna use the, that, the old algorithm that I, I know

you told us it could mask safety signals," but in their mind they had to be saying, "Which is exactly what we want, because we've gotta hide these thousands and thousands of deaths that are appearing on VAERS."

Senator Ron Johnson: You know, back then in, in March, April, uh, there, there were a few thousand. By the way, back then I, I confronted Francis Collins, head of NIH. Yeah. Uh, this was end of April 2021, in person with [00:05:00] some other Republican senators, said, "Are, are you watching VAERS? There, there are about 2,900 deaths reported on VAERS right now."

Senator Ron Johnson: And at that time, 46%, 'cause we were doing this to elderly, you know, m- more feeble individuals, 46% of those deaths were occurring on the day of vaccination or within one or two days. And Francis Collins looked at me and said, "Well, Senator, we, we've attributed six deaths to the Johnson & Johnson vaccine, uh, with, you know, women of childbearing age.

Senator Ron Johnson: So six. In, in terms of the other deaths, Senator, you know, people die. People die." So anyway, they were warned that their, their algorithm's gonna mask safety signals. They chose to stick with that algorithm even though they were showing a new algorithm showing safety signals on sudden death, strokes, I mean, all kinds of serious stuff, and they hid it.

Senator Ron Johnson: Now, what makes this even sicker, in March of 2021, that same month where they were first warned about this- NIH was [00:06:00] already treating people that they were diagnosing having been injured by the vaccine. In the end, they treated about 23 individuals, somewhat successfully, no total cures, but re- relieving symptoms.

Senator Ron Johnson: They told those 23 injection-injured individuals, "Don't say anything to anybody. We, we, we wanna make sure we collect all the data. We don't wanna mislead anybody. We don't wanna give them, you know, the, the wrong type of treatment, so stay silent. When, when we got all our data in, we've finished our study here, we'll release this, the report.

Senator Ron Johnson: We'll acknowledge these injuries so that other doctors can acknowledge them, and we can treat all these people that are on your support groups." They never published the study. To this day, they've not acknowledged these serious adverse events. They continue to cling to the fact that the injections were, were safe and effective, and that what adverse events, which they don't deny, but what those adverse events are generally rare and mild.

Senator Ron Johnson: That's, that is their mantra to this day. [00:07:00] Now, Peter Marks, of course, has moved on to Eli Lilly, making, I'm sure, millions, uh, at that drug company. But l- let me underscore this, 'cause I want people really thinking about this. Now, the, the other thing we're looking right now f- for fe- for FDA to prev- prevent us or provide us is all the data on the 96 autopsies that FDA reviewed on children deaths, that they, on 10 of them, th- there's just no doubt that the injection caused those child deaths.

Senator Ron Johnson: Now, we're, we're, we're, we're starting to get information, but we're trying to get all the data on that. Think of being a parent of one of those children who... In the news, we already realize if you're a young child, you, you had virtually zero chance of having a serious problem getting COVID. But you've got the President of the United States saying that this is a pandemic of the, of the unvaccinated.

Senator Ron Johnson: You know, "Get vaccinated so you don't kill your grandma." So [00:08:00] these parents, m- maybe they're a little leery of an experimental injection or gene therapy. But they listen to Peter Marks saying, "No, th- this is safe and effective. Uh, what, what adverse events are rare. They're generally mild. And let's face it, guys, I mean, don't kill Grandma."

Senator Ron Johnson: Mm. And so they decided to get their child injected, and now we know 10 of them absolutely died from that injection. Now, that's just the tip of the iceberg. Uh, in total, worldwide, according to VAERS, 39,000 deaths are reported worldwide on VAERS associated with the COVID injection. 24% of those deaths occur on the day of vaccination or within one or two days.

Senator Ron Johnson: Almost a quarter. And we know from a CDC-commissioned study at Harvard, the Pilgrim Study, that in general, about one per- only 1% of adverse events are reported to VAERS. So VAERS dramatically understates, and, [00:09:00] and I realize VAERS doesn't prove causation, but dying within a day or two of your injection, I, I know how I would feel about a loved one who'd got an injection, you know, perfectly healthy, and died the next day.

Senator Ron Johnson: I know exactly what would cause that. Yeah. But if you, if you multiply that 39,000 by a factor of 100, it's only 1%, that, that's potentially 3.9 million people worldwide. Again, I'm not claiming that. I'm not saying that. I've already been, you know, false PolitiFact check that I said 3.9 million died. No, I'm just laying out the, the under-reporting factor here.

Senator Ron Johnson: Uh, 39,000 people dying of the COVID injection is probably a, a, a dramatic understatement. And again, this is all in light of the fact that so many of these people died taking the injection well after the time that Peter Marks, the head of the division that is approves vaccines and is supposed to surveil their safety, knew that their system was gonna mask safety signals.

Senator Ron Johnson: A new system, [00:10:00] unmasked, that showed safety signals on things like sudden death, stroke. I mean, this, this is, this is evil. What has happened is evil, and what's even compounding it now, it's being covered up in the mainstream media. I, I... You know, I'm going on shows like this. I'm going on, you know, cable news, that type of thing.

Senator Ron Johnson: You know, Fox, to its credit, has, has had me on for both, both Fox Business and, and main Fox, Maria Bartiromo. I was on WABC Radio, but not CBS, NBC, ABC. Again, I, I mentioned CNN invited me on. I told them what I wanted to talk about. They disinvited me. Um, th- this, this is a, this is a ma- I can't think of a more major scandal having to do with our federal health agencies than this one, and it's radio silence here in America.

Graham Hood: Senator, it's global. It's global. It's not just America, we're... what we're going through. John.

John Larter: Well, I think that's the point here, isn't it? Because the, you know, the Australians are obviously relying on data, uh, and signals from the US, so this is filtered here, uh, by [00:11:00] default. Uh, our, our TGA only recognizes, Senator, that I think, uh, about 15 people, uh, died from the COVID, uh, vaccinations, despite the fact that, uh, 1,000, uh, people were reported to have died from it, but they don't recognize those.

John Larter: Uh, Senator Malcolm Roberts here in Australia said that, uh, 30,000 people have likely died from these vaccines in the last 24 hours, but he was labeled grotesque. Uh, we happened to be, uh, interviewing Dr. Philip Altman, who, uh, is a highly regarded, uh, expert here in Australia, and he said, "Yeah. Well, Malcolm Roberts is probably wrong.

John Larter: It's probably in excess of 100,000." Uh, so I mean, the- these people are making Adolf Hitler look like a, a Boy Scout, aren't they?

Senator Ron Johnson: Well, you know, under- understand what we're up against. We're, we're, we're up against the entire medical establishment, virtually, that pushed this on their patients. We're up against the federal health

agencies that approved [00:12:00] conditionally and then full licensure these, these things.

Senator Ron Johnson: We're up against politicians who, who made videos- Mm ... you know, asking their constituents, you know, "Get jabbed," you know, "End the pandemic." We're, we're up against the, you know, the former president of the United States who threatened people. You know, "We're, we're losing our patience with you unvaccinated folks.

Senator Ron Johnson: You know, you're, you're driving this pandemic." You know, th- they, they wouldn't listen to some of the vaccinologists and epi- epi- epidemiologists who warned that the, the stupidest thing you can do in the midst of a pandemic is mass vaccination. You would drive mutations, you would drive variants. Yeah. Is that what happened?

Senator Ron Johnson: I mean, you... If, if you look at the... And I've, I've got a great chart that shows number of new cases daily. That tap- topped out in December of 2020 and January 2021. By, by March, April, that was way down. And so you... The, the, the pandemic was, was diminishing. It was, it was petering out. And then the, the vaccine came on stream, and as the uptake of the vaccine...

Senator Ron Johnson: And by the way, [00:13:00] it has such a low uptake that you can't credit the vaccine with, with bringing those n- number of new cases per day down. Mm. But as the vaccine uptake increased, all of a sudden, here comes Delta variant, and the next year, Omicron. And the, and the pandemic dragged on for a couple years. You know, probably if we never would've vaccinated...

Senator Ron Johnson: Well, I c- I can't say this. I mean, it's just a theory, but it sure looks from that, that chart of new cases that this, this pandemic was pretty well, like I say, petering out in, in 2021. In the end, it didn't, and the vaccine sure didn't prevent or f- or didn't, didn't cause it to end.

Graham Hood: Senator, are you getting much support from within your own party over there with this, this, with these revelations?

Graham Hood: Or are you finding reticence amongst your own group? I

Senator Ron Johnson: mean, nobody knows about it. You know, I, I held this hearing. Um, I, I'm talking to, to Republican senators at lunch. They hadn't, they hadn't heard about the hearing. They hadn't heard about my report. You know,

they're, they're shocked at the revelation, the, the [00:14:00] ones I'm talking about.

Senator Ron Johnson: Uh, you know, I, I probably need to do a, a conference-wide, uh, presentation on this if, uh, if they'll listen to me. But, you know, they're... Mo- mo- most, most senators on a bipartisan basis are, are like the rest of the American public. They're in a state of denial. You know, e- even people that got the injection that might have had a s- a serious...

Senator Ron Johnson: I, I know people who've... Seems to me that they were injection-injured. They call it long COVID. They, they don't want, they don't want to associate their vaccine injury with the vaccine 'cause it was a decision they made, so they don't want to admit they're wrong. They, they, they certainly don't wanna hear evidence of DNA contamination, about turbo cancers, you know, about, you know, m- myocarditis.

Senator Ron Johnson: I mean, th- th- that sticks with you. I mean, that's permanent damage to the heart. Okay? Um, it, it shortens lifespan. They don't, they don't wanna hear about that stuff. So we, we literally have probably a global state of denial right now. Most people wanna forget the pandemic [00:15:00] ever happened, they wanna forget they got the injection.

Senator Ron Johnson: They just wanna move on their lives, and I have a hard time blaming them, but we have to blame and we have to hold these people, these ev- and it's evil people- Yeah ... who had the information, had a duty and responsibility to tell the American people, the global population, what they knew. And not only did they not tell them, they lied bold-faced to the world.

John Larter: Senator, uh, I, I think, uh, Nicholas Hulse summed it up pretty, uh, well the other day. Uh, you know, he, he indicated about, uh, Fauci in relation to the gain of function stuff in Wuhan, uh, the, the subsequent global pandemic. Uh, uh, then we had the suppression of early, uh, treatment protocols such as ivermectin, hydroxychloroquine.

John Larter: Then we had the, uh, the hospital protocols such as remdesivir and, uh, uh, people being put on ventilators that were, that were killing them. Uh, and then we had the experimental mRNA vaccines, which are, uh, uh, are a complete, [00:16:00] uh, uh, humanitarian disaster, probably the worst in living history, uh, on the background of mandatory vaccines.

John Larter: Uh, yourself, uh, Senator Rand Paul, I mean, you're uncovering all these, uh, crooks, uh, i- in, in the Senate in, in America. I mean, what's next?

How, how do we, uh, how do we, uh, pursue these people for what they've done?

Senator Ron Johnson: So even though I've been doing this oversight, writing oversight letters for years ... Now, I'll use an example.

Senator Ron Johnson: The, you know, we have one indictment for Dr David Morens. The only reason we have that indictment was because my staff pulled a needle out of a haystack out of a 115,000-page production, not from HHS. We, we got nothing from the Biden HHS, even though I wrote them some, like, 60 letters, some associated with COVID in some way, shape, or form.

Senator Ron Johnson: But we also requested information from universities. So we got 115,000 pages of documents from a university in Texas, and my staff [00:17:00] pulled that one email where David Morens is talking about he has a FOIA lady, Freedom of Information Act lady, who has, has showed him how to make emails disappear. And if, and I'll

Senator Ron Johnson: And further, "If you've got something sensitive, send it to my Gmail." That's a clear violation of the, the, uh, uh, Federal Records Act, uh, destruction of federal records, which is charged with conspiracy. Uh, but, but that's, that's just one person. Now, we finally got these documents out of, out of Bobby Kennedy late last year.

Senator Ron Johnson: So now we have the people who wrote these things. Again, we see also evidence of, of them evading FOIA. you know, talking about it. Say, "Well, s- FDA stopped sending us these, uh, the data reports 'cause they know about the FOIA requests coming in here. Um, th- this is pretty sensitive, so, you know, let's talk offline.

Senator Ron Johnson: Probably shouldn't be including this in an email." So I mean, th- they're fully aware of this. So it's remarkable that we found as many incriminating emails as we found. [00:18:00] But now we know who wrote them. We know who was, who was, uh, CC'd on them. We know who attended these meetings, when they were briefed. We've got the briefing papers.

Senator Ron Johnson: So our next step now is to start interviewing people. And, you know, th- th- we interview them under oath, and they need to be very careful that they don't lie to us under oath. This, this will be a very serious investigation. Now, it's gonna take some time. I'm sure these people will lawyer up. I'll probably have to issue subpoenas.

Senator Ron Johnson: They, they'll probably plead the fifth. Uh, but, but a challenge is gonna be the, the... You know, federal government does a really good job of protecting itself against lawsuits. It does a really good job of protecting people that d- do its bidding, their, their, the federal employees, against lawsuits. But, um, I, when, when there's fraud involved and, and, and a fraud that is so massive that resulted in such death and destruction.

Senator Ron Johnson: Again, because this isn't being c- covered by [00:19:00] the mainstream media, th- there's not a level of outrage in America yet as there should be. I mean, th- there should be an upswell of outrage. You know, in America, a Rasmussen poll showed about 24% of Americans believe they know somebody who died from the COVID injection.

Senator Ron Johnson: Quarter of the American population. So they are gonna completely believe this story if it's ever told to them. And right now, it's not being told to them. Senator- I'm doing, I'm doing as many interviews as I possibly can to get the word out, but until, until the mainstream media picks this up and covers it as the major news story that it is, uh, the blockbuster revelation that it is, uh, we're, we're just not gonna get the appropriate level of, of outrage by the American public.

Graham Hood: Well, we'll be sending this interview to several Australian outlets to see what kind of response we get from there. But I had a phone call yesterday from somebody who lost a loved one on the day they got the booster, and I said to them, [00:20:00] "Were they vaccinated?" "Yeah, they got the... They, they had four or five shots.

Graham Hood: They had the booster the day they died." I said, "Do you think it might have been the vaccination?" "Oh, no, it's not the vaccination. The vaccination saved his life." I mean, this is what we're up against. It is- Mm ... absolutely bizarre. Um, but my biggest problem is while all this protectionism is going on around these authorities- that there is a community of authentic doctors and scientists who are ready to jump into the breach and start finding cures, mechanisms to save people's lives from this, and they're being held back because people are protecting their butts.

Graham Hood: Now, that's pretty hard to come to terms with. How do you sleep at night when you know that this is going on? You must be frustrated to hell.

Senator Ron Johnson: I mean, it, uh, you know, understand, I, I literally have reverence for doctors and nurses. My, my first child was born with a very serious congenital heart defect, the transposition of the great arteries.

Senator Ron Johnson: So at eight months o- first day of life she was saved with a balloon [00:21:00] septostomy, a ca- catheterization of her heart, by a skilled cardiologist. Eight months later, in a seven-hour surgery, they re-baffled the upper chamber of her heart. Yeah. Okay? So, I mean, they saved my daughter's life. She's 42 years old now.

Senator Ron Johnson: She's a nurse practitioner herself. She's, you know, writing music. She's just, you know, a beautiful woman, you know, two, two grandchildren through surrogacy, so. You know, so I, I love doctors and nurses. Yeah. I cannot tell you how profoundly disturbing I found COVID when I, when I saw so many doctors. And I, you know, I understand this, th- they've got...

Senator Ron Johnson: They went to medical school. They got hundreds of thousand dollars of, uh, you know, student loans outstanding. They wanna take care of their family. They wanna remain doctors. They saw what happened to people like Peter McCullough and Pierre Kory and, and other people whose careers were destroyed, whose licenses were, if not revoked, threatened to be revoked.

Senator Ron Johnson: It doesn't take very many people for a tyrant to hang in the public square before the less, rest of the population [00:22:00] falls into line. So I, I've had a lot of doctors come up to me and, you know, quietly say, "Hey, thanks for doing what you're doing." Yeah. "I j- I just, I, I, I, I, I, I need to keep, I n- I need to, you know, keep my head down."

Senator Ron Johnson: No, it's, it's very sad what happened. So they, so they wouldn't treat patients. They, they wouldn't prescribe ivermectin, um, and some of these other things. B- they just wouldn't do it. I mean, it... Remdesivir, pu- pump that into your, into, into our patients' veins. Hope it doesn't knock out the kidney. Or if it does, I guess the hospital's gonna make more, more money on dialysis.

Senator Ron Johnson: I mean, you know, it's a, it's a sick system.

John Larter: Senator, uh, one of the other great areas that you're, you're doing fantastic work in is the, uh, the removal of, uh, the liability, uh, shields for these

vaccine, uh, uh, makers. Can you, can you give the audience a bit of a, an update on what, where that's, uh, going?

John Larter: That's a tall order.

Senator Ron Johnson: I mean, we, we can propose legislation. You can co-sponsor it, but, you know, the COVID cartel, the vac- the, the pro-vaccine lobby is [00:23:00] unbelievably strong. And by the way, if, if you haven't heard of it, if you haven't read it, I'll, I'll... anybody listening to this thing, read Aaron's series Vaccines Amen.

Senator Ron Johnson: It's, it, it, it's sort of the seminal book. I mean, you can read Dissolving Illusions. You can read Turtles All The Way Down. You can read Peter McCullough's Vaccines: Mythology, Ideology- reality. Aaron Siri is an attorney, you know, who has to prove his case in court, so he needs facts. He can't rely on his reputation.

Senator Ron Johnson: Just has all the facts to open anybody's eyes in terms of h- how grossly under- underpowered these studies are on childhood vaccines, proves the case that not one vaccine on a childhood schedule in America has ever been tested against a true placebo. It, it shows how pitiful the number of days are that these vaccine, that they actually follow children in their safety studies.

Senator Ron Johnson: I mean, people will be shocked based on the lies that the pro-vaccine crowd, that the vaccine amen crowd is, has been preaching to them very effectively for decades. [00:24:00]

Graham Hood: Yeah, we've, we've had, um, Aaron Siri on the program. It was enlightening. I sat through, uh, nine hours of the deposition he did with, uh, Stanley Plotkin.

Graham Hood: Um, I thought I was watching a- That, that...

Senator Ron Johnson: So, so have I, by the way. That's brilliant.

Graham Hood: It is absolutely brilliant, and I love the way he leads him up to that last hour of the deposition where he exposed everything. I mean, that was like watching Nuremberg for me. That was just incredible. And yet this information is still not getting out there.

Graham Hood: We're struggling over here to break out of the bubble that we find ourselves in. We are having a little success here and there. We are seeing mainstream journalists starting to crack and starting to think that there's something wrong. But those that we talk to to try and promote the story are saying, "If we, if we run with this story, we're gonna get trodden on from above."

Graham Hood: Mm. And speaking of being trodden on from above, do you think in your heart of hearts if President Trump were to see what you've been talking to us about, that he would react, and how do you think he would? [00:25:00]

Senator Ron Johnson: Well, I, I've shown him my failures chart in person, and he looks at it, looks up to me, saying, "Oh, even, even Democrats say it saved 100 million lives."

Senator Ron Johnson: So, you know, he, he's pretty proud of Operation Warp Speed. He wants to believe that, uh, that... And by the way, the COVID injection might have saved some lives. I, I don't deny that. But we don't know. One, one thing I, I've, I've dispelled the myth, and w- we can send you these charts if, if you want me to after this.

Senator Ron Johnson: Uh- Please do ... but I just, th- there was, there was... In, in one of our hearings, my ranking member, Senator Blumenthal, trotted out this Commonwealth Fund study, this mathematical model, claiming that the injection saved 3.2 million lives in America in 2021 and 2022. Okay, th- so remember that. I'm, it's easy to do with charts, but I, it's easy to do with numbers.

Senator Ron Johnson: So remember that, 3.2 million lives. 2019, the, the year before the pandemic, in America we had 2.8 million deaths. Okay? The year of the [00:26:00] pandemic, we had 3.4 million deaths. So b- it was actually 2.85. So it was about a half a million additional deaths from what would be normally, right? You would think if the vaccine were effective, the next year we'd be less than 3.4 million, right?

Senator Ron Johnson: We'd return more to that norm of about 2.8, 2.9 million. No, we went to 3.5 million. The next year in 2022, we came down to 3.3, but it's still above what the normal rate, which would be slightly growing because we're aging and our population is growing. By about 2024, we'd be about 3 million deaths. So we went from 2.85 to 3.4, 3.5, and then 3.3.

Senator Ron Johnson: And again, the two relevant years according to the study was 2021, 2022. So those are the actual deaths. If you were going to make the claim that you saved 3.2 million deaths, you'd have to assume that the year of the vaccine, the first two years of the vaccine, we were going to have 5 million deaths. Go from 2.5 million [00:27:00] to 3.4 in the year of an unvaccinated pandemic, and then assume we're going to go to 5 million in 2021.

Senator Ron Johnson: It's total BS. It's so easy to disprove that. But again, you just have a group. You know, we got the study at 3.0. And, you know, the COVID cartel, as I call them, they glom onto that and they preach that and people believe it. Just like, you know, people claim that vaccines have saved 150 million lives worldwide.

Senator Ron Johnson: If you read Aaron Siri's book on page 84, he's got a great chart. And on that chart, he goes through all the childhood illnesses that we vaccinate against. And he lists the number of deaths in America the year before the vaccine was available. You know, in America, they claim the vaccines have saved over a million lives.

Senator Ron Johnson: Okay? The total number of deaths per year of all those childhood vaccines the year before the vaccines is less than 5,000. So how can over, you know, even decades, how can you claim you're saving [00:28:00] a million lives when you only lost 5,000 lives total of those childhood? And by the way, this dates back to the 40s and 50s.

Senator Ron Johnson: We've gotten better at curing disease. We really have. You know, medical science has advanced. It's also done some really terrible things.

John Larter: Senator, there seems to be another looming crisis that the mainstream media are grabbing hold of. A cruise ship somewhere out in the ocean has had a couple of people die on there from hantavirus.

John Larter: They're really beating this up in Australia. You know, they're bringing out the people in the suits and washing everyone down and all the fear stuff. Ironically, this same hantavirus appears in the Pfizer secondary side effect causes as well.

Senator Ron Johnson: Yeah, well, so I- I- I would think that's probably unrelated to the vaccine.

Senator Ron Johnson: I mean, what, what we're now [00:29:00] hearing is we know who, you know, case zero was. There's a biologist who's roaming around a dump with all kinds of rat feces. Okay? We do know that, you know, that's how you, you know, generally tr- it's generally not human-to-human, unless you're very close to somebody who's really sick, then you can spread it human-to-human, and it's looking like that's exactly what happened.

Senator Ron Johnson: Again, you got a cruise ship, you got closed circulatory system. Um, you know, w- so, but, but we also know that that ha- that's not a new one. This, this isn't some new virus. This is the same virus that's been identified before. It's not some new species like the coronavirus that had the f- furin cleavage site that was inserted by, by somebody, probably the bat lady.

Senator Ron Johnson: If... You know? Okay? So no, th- this is, they're trying to use the same playbook, and quite honestly, and I got reamed, you know, big time during the coronavirus when I accused Fauci of over-hyping AIDS just like he ov- is over-hyping the coronavirus, and now they're trying to do the same thing here. By the way, he definitely over-hyped [00:30:00] AIDS.

Senator Ron Johnson: He's out there saying, you know, household transmission, and he wanted a vaccine for that. I mean, this is, this w- this is Anthony Fauci's playbook that still exists in global health.

Graham Hood: Wow. Uh, I, I've re-shared a, a video that I found, uh, from Dr. Zev, uh, Zelenko, uh, which I think dates back to 2021, where he talked about, uh, hantavirus amongst a, a bunch of other respiratory illnesses.

Graham Hood: And he said, "All we have to do is issue people with, uh, vitamin D3 and zinc, and we knock all this stuff on the head. Vitamin D3 and zinc. That's all we have to do." And that is a, an ageless video clip. I mean, it, it's just so profound in the way we look at things today. Um-

Senator Ron Johnson: Yeah, I read something about something that was pretty effective with, uh, hantavirus, but I mean, nasal sprays.

Senator Ron Johnson: I mean, I got reamed about talking about gar- gar- gargling. I mean, an- anything with a respiratory virus that you can reduce that viral load in your upper respiratory tract is gonna be good. You don't want it getting to your lungs.

John Larter: Mm. You

Senator Ron Johnson: know, [00:31:00] this is just common sense. I mean, it was common sense medicine before the coronavirus, and then they didn't wanna use common sense 'cause they didn't wanna use cheap generic drugs.

Senator Ron Johnson: They wanted a platform for this mRNA injection. And you just go back to a Milken Institute panel that Fauci and Rick Bright were on, where they both bemoaned the fact that we don't have a universal vaccination program in the US or globally. A flu just doesn't do it. As much as they try to push the unbelievably ineffective flu vaccine, I, I laid out the numbers.

Senator Ron Johnson: There, there was one year where the flu vaccine was supposedly 10% effective. Means it's completely ineffective, right? But they couldn't get a universal vaccine program with flu vaccination, so it was gonna take a pandemic. You know, three months later, they had their pandemic and they had their, their outlet for this mRNA platform that was never successful in what was targeted for- For initially cancer research, 'cause they c- they couldn't control it.

Senator Ron Johnson: And then they lied to us that it was gonna stay in our arm. Biodistributed all over the body. Yeah. [00:32:00] So no, I mean, lie, I mean, Peter, Peter, uh, M- Mike Geeden did a great job of laying out all the, the lies of COVID early on. Uh, th- those things still ring true today.

Graham Hood: Senator, in Australia at the moment, we're really championing a, a cause that's been around for nearly 40 years, and I wanna know what you know about it, uh, th- because we know that this has troubled countries all around the world, such as the USA, and it's the tainted blood product scandal.

Graham Hood: Uh, back in the 1980s, blood banks around the world were soliciting blood donations from, uh, gay men, and, uh, they knowingly distributed blood products to people around the world that were contaminated with HIV/AIDS, with hep C, and other diseases. They knew it was contaminated, yet they still put it out there.

Graham Hood: And at the moment, we're seeing tens of thousands of people affected in Australia. They have been for 40 years. There's been no compensation, and the way we're looking at it is we can't leave any wounded on the battlefield. If, if we can walk past [00:33:00] the, the, um, the, the morality of leaving those people in such a state, where you had pregnant mothers and their children dying of HIV/AIDS because of medical cover-ups, then the same thing is gonna happen with us with the mRNA shots.

Graham Hood: Um, so we have a cycle in Australia where we wait 50 years after a disaster, and then we apologize for it, that by then, all the people who suffered from it are dead, all the people who caused it are dead, and it falls hollow. Are you aware of situations like that in America? Have you guys been dealing with that in any way?

Senator Ron Johnson: So my own personal story, remember I told you my, my daughter, who was born in 1983, right, right at the beginning of the AIDS crisis, where we didn't know a whole lot.

Graham Hood: Yeah.

Senator Ron Johnson: Uh, so, so my mom, she has, uh, Rh negative blood, so she's a very wanted donor. Mm. So she was very well known in, in the blood donation, plus working at their church.

Senator Ron Johnson: So prior to my daughter's surgery, her open heart surgery, uh, we were concerned about, you know, the blood bank, uh, with, with AIDS spreading, you know. Didn't know much about it. So [00:34:00] my mom literally got, from her church group, 30 pints of blood donated for my daughter's surgery. Uh, ended up my, my daughter did need a pint of blood.

Senator Ron Johnson: They didn't use any of those 30 pints. They just pulled one off the shelf. Wow. That shows you how caval... I mean, as much as I love the doctors and nurses who saved my daugh- I mean, the medical establishment, the protocols are so cavalier. And we, we talk about hospital protocols. I, I'm, I'm gonna hold a hearing on those.

Senator Ron Johnson: Uh, hopefully it'll f- feature Attorney Ralph Larigo. I don't know if you've interviewed him or not, but this is an attorney who got called in by families whose p- whose loved ones were basically held captive in these hospitals, right? They were begging them. I mean, just please try ivermectin. Try some of these things, you know.

Senator Ron Johnson: Nope, won't do it. So they took, they had to sue these hospitals. These are rough figures of, you know, about 40 cases he won, 40 cases he lost. Of, of the 40 cases he won, s- one of those individuals was already too [00:35:00] far gone, and he- one person died. Of the 40 cases he lost, they all died under the hospital protocols.

Senator Ron Johnson: So the freedoms we lost, you know, inside the hospital, outside the hospital, were profound. And again, that's why we need to be...

That's why we need a co- COVID reckoning. That's, that's why I'm not giving up on this. This, this is why this information has to get through. People have to be aware of just the, the abuses, the corruption during COVID.

Senator Ron Johnson: The, the miserable, the miserably failed response to COVID. They need to understand it so we can't let it happen again, because that playbook's there, and they are just itching to use it. You can tell by this antivirus scare.

John Larter: 100%. Senator, uh, Hoodie just mentioned the infected, uh, blood scandal in Australia, and it, it's obviously a, a massive, uh, overlooked crisis here.

John Larter: But just looking forward, uh, w- what are your thoughts on, on [00:36:00] organizations like the Red Cross, uh, globally going forward with the, uh, with the contamination of blood in relation to mRNA? I mean, we know the spike protein, uh, is hanging around, uh, you know, for a lot longer than, uh, these experts told us. Uh, and, and there's likely other issues as well that we don't even know about yet.

John Larter: Uh, h- how's that going to affect, uh, the, uh, the delivery of, of, of blood products into, into the future do you think?

Senator Ron Johnson: It, it's gonna be difficult. You know, blood products are, you know, not the easiest to obtain already, okay? It's not like we have a, a huge surplus of them. So you've got a very large percentage of the global population that got the mRNA injection, and, you know, so th- that's gonna be probably something we're gonna have to live with.

Senator Ron Johnson: Um, certainly if, if you weren't COVID in- in- injection, injected, uh, you, you know, you'd like to think there could be an alternate... You know, like my mom did.

John Larter: Yeah.

Senator Ron Johnson: You know, l- literally, you know, but in an emergency situation, you don't have [00:37:00] time to plan for that. You know, if you've got a planned surgery, you can potentially try and protect yourself, if the blood banks would even cooperate with you.

Senator Ron Johnson: Th- th- like I said, with, you know, back in AIDS, I mean, this is a serious issue. This, this was not something that we did that was,

you know, like we were freaking out and we're paranoid about. This was a r- you know, this is my little daughter, little eight-month-old daughter. I, I don't want her contaminated with AIDS-contaminated blood, and you just took one off the shelf.

Senator Ron Johnson: So it's, it's a problem, you know? I, I'm not hearing blood contamination in the US because they don't wanna talk about it. You know, just like FDA didn't wanna talk about safety signals. Is it happening? Probably. It's just out of no- nobody's radar screen.

Graham Hood: Wow. It's incredible. Um, yeah, what we're seeing out here in Australia, once again, is we, we had a, a pelvic mesh scandal, medical scandal, uh- It was publicized.

Graham Hood: It was the biggest payout, I think, in, in history in Australia in a class action. And it turns out by the time the lawyers and all the other, uh, people with their fingers in the pie got a hold of the money, the r- the, uh, [00:38:00] the, the survivors of the pelvic mesh scandal only got four grand each. Wow. I mean, we're just, we're just seeing this constant stream of medical malfeasance that...

Graham Hood: And, and our biggest problem is, once again, and I, I don't know whether people are scared that they're gonna be prosecuted or hung or whatever, um, that so many people are just not willing to say, "Hey, we screwed up. We've got to admit we screwed up, because what we've done is set in train a motion that's gonna be...

Graham Hood: We're gonna see the ripples of for eternity, basically. We're gonna see these people falling over." We interviewed a, um, a wonderful analyst from the Philippines. She's an Australian expat, um, Sally Clark, and she has gone through all the databases and all the bureaus of statistics around the world, and she's just analyzed their data and correlated that with vaccine rollout, and she has identified massive increases in, in, in death rates and a massive decrease in birth rates.

Graham Hood: She's identifying [00:39:00] shrinking populations around the world, and this data is incredible. She was asked to present that data at an inquiry for the Philippines government, and halfway through presenting it, they shut the whole inquiry down. So it, it almost seems to someone like me that we're doomed to have to live with this stuff.

Graham Hood: But we're getting told day after day after day, "Why are you guys still talking about the mRNA shots? Why don't you move on? It's over." Why do you think we need to keep on about it?

Senator Ron Johnson: Well, I mean, talk about the blood bank. So assume that you've got spike protein and possibly even the mRNA injection, you know, the, the, the lipid nanoparticle.

Senator Ron Johnson: That may be in, in donated blood, right? If, if somebody gets that, that, uh, donated blood and then suffers a heart attack, there's... I mean, they, they wouldn't, they wouldn't attribute a heart attack to somebody who just got the injection, the, the full bloat, you know, f- full boat, uh, uh, dose of it, right? They're certainly [00:40:00] not gonna correlate blood with the spike protein or the lipid nanoparticle with the mRNA in it.

Senator Ron Johnson: They're certainly not gonna attribute some adverse event to somebody who got a blood transfusion. Uh, and y- you know, there have people to come, have come forward, okay? People do come forward. They get destroyed. That's, that's the problem is, you know, y- the good people come forward, they tell the truth, and they get destroyed.

Senator Ron Johnson: They get vilified. They get ridiculed. They get mocked. Uh, the c- the COVID cartel, the medical establishment, the f- the, the federal and, and global health agencies, they know how to protect themselves, and they are powerful. I mean, they, they, they're the ones that have the money. They're the ones that have the, have all the people and the places.

Senator Ron Johnson: I mean, you got the Bill Gates of the world, you know, funding Gavi and all these, all these or, you know, World, World He- Health Organization. Again, we are up against powerful forces, and the, the on- the only weapon we have is the truth. But, but we [00:41:00] convey the truth, and we just get stomped on it, and th- they, they come up with a, a, a different explanation.

Senator Ron Johnson: Again, w- so what I, what do I think long COVID is generally? I think it's probably injection injuries. But they've come up with COVID, they've g- come up with long COVID. Now, do, does long COVID exist? Probably, because when you got infected, you also got the spike protein. That was the nasty part of the coronavirus, the spike protein.

Senator Ron Johnson: And they designed an injection, a, a, a quasi-vaccine that turned the body into a manufacturing site of something that it was toxic to,

like the spike protein. Th- that's why a guy like Dr. Michael Yeadon, worked for Pfizer for 30 years, was beside himself when he heard what his colleagues were doing. He couldn't belie- he could not believe they were designing an injection like that.

Senator Ron Johnson: Couldn't believe it.

Graham Hood: Well, we- we're, we're working with a former colleague of mine, um, an airline captain of many years, who has a massive vaccine injury as a result of the [00:42:00] mRNA shots, and he has had 19 declarations that he, um, that he has a vaccine injury by specialists. And one specialist said to him, "We can't believe it.

Graham Hood: Your body has become a spike protein factory. You are just churning this stuff out at a rate faster than we can protect you from it." Um, and this is, this is all being revealed. But what we're finding is a lot of these doctors, when we say to them, "Okay, are you prepared to come out and say that publicly?"

Graham Hood: "No, no, no." Nope. No. No. And some of them are using the mantra, and it's fair enough to say, that if we get deregistered, how are we gonna help people in the future? Well- We've gotta stay under the radar. There's a lot of truth in that.

Senator Ron Johnson: So- It's, it's massively true. It just is. And again, as I said, it doesn't take tyrants very, it doesn't, they don't have to hang very m- many people in the, in the public square, brutalize them, before people say, "Oh, I think I'll just keep my head down and keep me and my family safe."

Graham Hood: Well, you know, what you said about people being gaslit and made, made out that they're insane and everything, [00:43:00] we're seeing that with, with a fellow championing the, the blood, the tainted blood products here in Australia, Charles McKenzie. Uh, there are people threatening to out him as being insane. I mean, this, he's been fighting this battle for nearly 40 years.

Graham Hood: He's lost everything. He's still persevering with it, and people are still gaslighting him the whole time. It's just reprehensible. But somebody's gotta keep standing up, and that's what you're doing. So, John.

John Larter: Well, I suppose, uh, Senator, I, I mean, the, the main, uh, point of, um, i- injury here is these vaccines, these mRNA products.

John Larter: I mean, y- do, do you see a day, a, a, a reckoning where, uh, Secretary Kennedy a- and, uh, and the likes of yourself w- will have the ability to halt this? Well,

Senator Ron Johnson: again, that's, that's why I'm not... Yeah, I've, I've really just begun my investigation, 'cause we just now got documents. So now we'll start bringing people in for interviews.

Senator Ron Johnson: Those should be awful interesting, very revealing, and we'll find out exactly what these guys knew and when they knew it. Again, we have...

Speaker 4: Yeah,

Senator Ron Johnson: I- I'm gonna [00:44:00] count, okay? Um, I'm not, I'm not a trained investigator, but I've been investigating now for, for years. There's a process you go through, and what you first need is you need the documentary evidence.

Senator Ron Johnson: It, it... You know, I always get the, "Well, call this guy in for an interview or, you know, test- testify before your hearing." It doesn't do any good. They know what they did wrong. They know what they hid. They, they know what, what we don't have. They can run circles around you. It's only once you have documentary evidence that, you know, s- takes you into, in, into a certain direction where you can ask pretty, pretty pointed questions and, "Well, how do you explain that?

Senator Ron Johnson: What, what, what did you mean by... What did you wanna discuss that you couldn't discuss via email?"

Speaker 4: Hmm.

Senator Ron Johnson: You know, "What, what did, what, what did you mean when, uh... Remember the boss wants to, uh, really push these boosters. Uh, we can't create vaccine hesitancy. I mean, is, is that why you, you chose an algorithm that you were warned was gonna hide these safety signals?[00:45:00]

Senator Ron Johnson: And then you went out and you told the American people you didn't see s- even though you were shown safety signals?"

Speaker 4: Hmm. Man.

Senator Ron Johnson: I mean, we, we, we got it right there. I mean, w- we, we got the emails. We have the dates. We s- we see the, uh... Are, are you gonna literally tell us that, "Oh, you didn't read that email even though we, you responded to it?"

Senator Ron Johnson: It's a dog show. So, I mean, you, you know, we, we've... Again, I, I don't wanna give, give everything away here, but these will be some very interesting interviews. So we'll do those, issue a report based on those interviews. They'll probably bring people in to testify, and they can take the fifth if that's the way they wanna take it.

Senator Ron Johnson: But that'll... You know, hope- hopefully by that point in time, we will shame some of these, you know, television networks, the main ones, to actually start covering this as the blockbuster story it is. Hmm. Hmm.

Graham Hood: Senator, you've been a, you've been a successful CEO in a, in a, in a very successful company, and, uh, you made a foray into politics.

Graham Hood: And since coming into politics, you have been delving. You've been working really hard. [00:46:00] We've got a lot of senators in Australia who don't even bother turning up at committee hearings, and we've got a handful that just turn up to every one, and they work hard, and that's what you're doing. In the process, we've seen the Australian senators working hard become very cynical about everything they used to once hold true.

Graham Hood: And I watched you on, uh, Tucker Carlson just recently, and it would appear that you too are now starting to become cynical, because you're there working in the engine room of all this, and you're seeing stuff that's having you scratch your head. Is that how you, you feel about, uh, about the world at the moment?

Graham Hood: Are you cynical?

Senator Ron Johnson: Uh, I'm, I'm not the world's greatest optimist I'm, I'm not the most, uh, uh, you know, uplifting person. Uh, I'm, I'm, I'm looking at reality right now, and reality is, is not pleasant. You know, politically we got the radical left destroying nations, uh, trying to do it to America here. Uh, in terms of our medical establishment, I mean, again, I, I find it [00:47:00] profoundly sad that, you know, the medical community that saved my daughter's life did this during COVID.

Senator Ron Johnson: Um, and, you know, I've never been a big fan of, of Congress. Um, you know, this, this place is just a charade. It's literally a charade. I mean, they call it the greatest deli- you know, Senate the greatest deliberative body, and, and we, we use things like a 60 vote threshold to av- avoid accountability. Uh, so no, I'm not a fan of this place.

Senator Ron Johnson: But, uh, it has given me a platform, you know, particularly as chairman, as this, uh, uh, you know, first the full committee, but even better is this, the subcommittee on... the permanent subcommittee investigation to pursue these truths, to expose them, to ha- to have the, the, you know, ad hoc subpoena power, to, to certainly threaten people with granting subpoenas if they don't voluntarily provide us documents and stuff.

Senator Ron Johnson: So it's given me a platform to be able to expose the truth and hopefully make an impact. Um, so again, you come from the private sector, you've seen... [00:48:00] you see excellence in the private sector, right? 'Cause you ha- you have to be excellent. To survive long-term, you have to, whether it's a rest- you know, the smallest little business, a, a restaurant, you have to be excellent if you're gonna survive.

Senator Ron Johnson: Yeah. But here, failure generally helps grow an organization. I mean, failure grows government. The, the more they fail, the, the more they demand more resources and more power to fail in a bigger way, I guess. And that, that's what we've seen in America, that's what we've seen across the world. I mean, gov- in America, our founders were geniuses.

Senator Ron Johnson: They, they understood that we're, we're not angels, we're men and women. If we don't wanna live in chaos and anarchy, you need some form of government. But boy, you gotta limit that government because government isn't your friend. Government is something to fear. You know, a one, one word definition of government is power.

Senator Ron Johnson: And as Lord Acton very appropriately pointed out, power corrupts. Mm. Absolute power corrupts absolutely. And that's what we see across government globally, is government is corrupt. Freedom [00:49:00] is the essential ingredient. Gov- in America, government was primarily designed to guarantee our freedom, not trample on it, not, not solve all our problems.

Senator Ron Johnson: And, and again, too many Americans, because we live in such an affluent society, and this is probably true in Australia and other places in the developed world, we've gotten so used to affluence, and we've

tolerated governments, governments and almost credited them with our success. It's, it's, it's a perversion of reality.

Senator Ron Johnson: You know, w- we succeed in spite of government. In spite of the taxation, in spite of the, the regulation and, and, and their freedom depriving actions. It's because, because the, the spirit of, of men and women is still strong. It's, it's hard to stamp us out. So ag- ag- that's where I, that's where I'm at. You know, you still have geniuses.

Senator Ron Johnson: You still have the Elon Musks of the world dreaming big dreams. You know, the Steve Jobs. You know, the pr- prior to that Edisons and, and Firestones and [00:50:00] Fords. I mean, you, you still have great men and women doing great things, and we just need to hope that, uh, truth, as Robert Malone has pointed out, is, is a lion.

Senator Ron Johnson: And it's, it's our only weapon and we have to believe it's gonna be a lion and, and will hopefully keep us free.

Graham Hood: Well, finally, John, I think we better let the senator go, but that's a perfect segue into the ASIO bill that we're facing. Mm.

John Larter: Yeah. There's a, uh, a bill in our, uh, Australian Parliament that's, uh, about, uh, essentially, uh, being able to take people, uh, in for investigation, interrogate them without, uh, even allowing them to have any, uh, defense.

John Larter: Uh, our government, uh, i- is just out of control. The, uh, the prime minister is, uh, is, uh, is playing it straight out of the communist handbook. Um, a bloke that's never had a job in his life and, uh, you, you, you wouldn't, uh, you wouldn't feed him. Uh, [00:51:00] and this is what they're doing. They're just absolutely, uh, tearing Australia apart with, with these sorts of bills.

Graham Hood: So they're, they're actually- Yeah, it's- ... they, they're going to... They, they, they're gonna pass a bill that will give our version of the CIA the power to come and, and apprehend you and arrest you. You're not allowed to have legal representation, and you won't be able to tell anybody that you've been apprehended by them.

Graham Hood: You've gotta keep that a secret. Now, I mean, is the hair standing up on the back of your neck or is it just me?

Senator Ron Johnson: Absolutely. And I'm, I'm, I'm keep thinking Magna Carta, Magna Carta. I mean, your- Yes ... your government was bequeathed, you know, just come down from the Magna Carta. A magnificent document. It's, it's really the basis of American freedoms.

Senator Ron Johnson: Okay? I mean, I mean, what, what a departure. You know, it's not... No, it's w- we the people have the power, not the king. Um, and, and to, to have, you know, parliamentarians that apparently have never read the Magna Carta. You know, politicians in [00:52:00] America that did you never not read the c- the Declaration of Independence and then follow up with the Constitution or the Federalist Papers?

Senator Ron Johnson: I mean, these are, these are revered documents written by learned geniuses. Okay? And, and w- w- again, we ignore them at our own peril, and unfortunately our education systems continue to degrade here in America for sure. My guess globally, it's, you know, not in China, though. Uh, th- their, their education system is Turning out really smart people, unfortunately, un- under a, a very awful governing system.

Speaker 4: Yeah. So

Senator Ron Johnson: again, no, n- you know, we, we free people have to stick together, and we, we've gotta cheerlead for, for each other. I, I was literally... It was depressing to see what was happening in Australia. As bad as it was in America, it was way worse in Australia and Canada. And listen, I worked for a British company for 10 years.

Senator Ron Johnson: I, I love the Brits, you know?

Graham Hood: Yeah. You

Senator Ron Johnson: know, I, I, I love, you know, the, the, the, the, uh, the empire and, and the children of the [00:53:00] empire.

Graham Hood: Yeah.

Senator Ron Johnson: Um, I hope you get your act together. Well, we- I don't think we get our

John Larter: act

Graham Hood: together. We're trying.

John Larter: They seem to be pushing back in the UK at the very least. Uh, it, it, you know, if, if word's correct that, that it appears as though, uh, S- Keir Starmer's days are numbered.

John Larter: Um, a, a terrible result for the, for, uh, Labour in the UK, which, uh, hopefully filters down here to Australia because, uh, our, our prime minister, Albanese, he, he is, he is the worst of the worst. Uh, absolute disgrace.

Graham Hood: Yeah, we've

Senator Ron Johnson: had a- I, I hope, I, I hope our publics are patient enough, and they won't be. But they have to be patient.

Senator Ron Johnson: I mean, whether it's the new British government, uh, or a new Australian government, or, you know, the Trump administration and beyond, you know, the, the leftists create such enormous messes.

Speaker 4: Mm. You

Senator Ron Johnson: know, spend what we don't, you know, m- more than we take in. You know, these enormous deficits, increase our debt, you know, open up our borders.

Senator Ron Johnson: I mean, these are enormous messes. You [00:54:00] don't snap your fingers and in one election turn it all around. So it's gonna require patience on the part of the public, but it's gonna require a moral and educated public too.

Graham Hood: Well, we're seeing a massive rise of, uh, of a fresh kind of politics in Australia, and the major parties are doing everything they can to destroy it, uh, both immorally and illegally, but it is rising nevertheless.

Graham Hood: So we're seeing this trend going through nations around the world, free lo- freedom-loving nations. Um, how do you see the primary... the, sorry, the, uh, the, uh, the upcoming, uh, Senate elections going? The midterms.

Senator Ron Johnson: It, it's gonna be tough. And by the way, I sprang out of the Tea Party, and I still view myself more Tea Party than Republican.

Senator Ron Johnson: But, uh, no, it's, it's, it's gonna be tough. I mean, I think President Trump had to do what he had to do with Iran. Y- y- he had to act before we could no longer act. I mean, they, they, they wanted nuclear weapon.

That's why they put up with sanctions for 47 years. Okay? They want a nuclear weapon, and that's an existential [00:55:00] threat to freedom-loving people.

Senator Ron Johnson: It just is. So he, he had to make the tough decision, uh, had to know it wasn't gonna be easy, and unfortunately, that decision... Th- the Iranian people don't have guns. So it's like Australians, okay? When, when, when the population's disarmed and the only people who have guns are the, are the brutal dictators, you got a problem.

Senator Ron Johnson: So Iran's got a problem. So as much as President Trump hoped, I'm sure, by dems- decimating their nuclear sites, their navy, their missiles, uh- The population can't rise up against those brutes that are armed. Yeah. So this is gonna take some time, and, you know, that's causing gas prices high, and Americans do not like high gas prices.

Senator Ron Johnson: Uh, that really impacts their, their pocketbook, and they're, they're pretty surly. And, you know, they're, they're blaming the President and the Republican Party for that. So I'm, I'm, I'm, I'm not an optimist about the midterms. That being said, if he could succeed, as he's succeeding in Venezuela, let's turn, totally turn [00:56:00] that narco-terrorist state into something we can do business with.

Senator Ron Johnson: You know, the, the positive impact it'll have on global world peace and security, on our geopolitics. You know, if we get rid of the ayatollahs, that would be... W- what an achievement. You know? And that, that might be what's required to, to save the midterms for Republicans.

Graham Hood: It's gonna be interesting times, but we're used to living in those.

Graham Hood: I think, um, uh, the work that you're doing, uh, you're championing the, the cause of so many people around the world who are struggling to come to terms with vaccine injuries and, uh, the deception that's gone on. Uh, we wanna champion you. So whatever we can do to spread your word, we will do that. We will make sure that this interview gets to s- our major politicians and media outlets, and we're gonna keep pushing the, the barrow as far as we can, and we're happy to have you on a- any time you need to push something.

Graham Hood: Let us know, please. Uh, Grace is in touch with us, and, uh, please thank her from us. Uh, [00:57:00] she's been amazing, and your staff are amazing. So we just wanna champion your cause. We think it's w- worth

championing. So we're here for you. And in that light, I wanna pray for you before we let you go. I'd

Senator Ron Johnson: appreciate that.

Graham Hood: Dear Lord Father in heaven, we thank you that you are revealing more and more light, but the people who are holding that lamp need to be supported and need to be protected and they need to be uplifted. So Lord, we pray that the work being done by Senator Johnson and his staff, and those people feeding him with that information, and the people like Aaron Siri and Bobby Kennedy, Lord, we just pray that that work will be protected, will be promoted by you, and that we will all in this world see the light of truth, because we ask this in Jesus' name.

Graham Hood: Amen.

Senator Ron Johnson: Amen. Well, again, I, I appreciate the opportunity. I appreciate what you guys do. Tell the story. T- tell the story. I mean, p- people need to understand what happened here so it n- can never happen again. But God bless all of you. Take care.

Graham Hood: [00:58:00] God bless you too, Senator, and we'll chat soon I'm sure. So, uh, John and I'll be right back after the break.

Graham Hood: Thanks for joining us. Well, there you have it, John. Um, that is a bombshell. Uh, we've done some great interviews. We have really done some top interviews, and we've interviewed some of the best in the world on this subject, but the information we've just heard, um- The fact that that's gonna struggle to get into mainstream is an indictment on who we are as a people in Australia.

John Larter: Yeah, and it's sad, Woody. Uh, you know, I, I reflect on all the interviews we've done, and I, I've gotta say, I, I, I, uh, I, I enjoyed my time, uh, with Senator Johnson. He's been an, a, a, a very special friend of, uh, of our program and, uh, and disseminating facts and information to, uh, Australians and, and, and the world.

John Larter: And, uh, he, he's so generous with his time. He's, uh, he's just a beautiful human being and, uh, y- you know that he's absolutely [00:59:00] sincere and, uh, and just oozes integrity. So, you know, I, uh, I, uh, I just hope that, uh, people, uh, that wouldn't normally get to see, uh, our interviews perhaps get to watch it, you know?

John Larter: Perhaps we need to, uh, introduce him to Carl. Um, you know, that might be a, a good way forward of, of, of getting, uh, getting that message into the mainstream if, if we can't reach it as, uh, easily as, uh, as others.

Graham Hood: Yeah, well, uh, I don't know how we get to Carl, but we'll, uh, we'll find a way. We will find a way.

Graham Hood: We know a couple of people who may have his ear. Uh, I think if he was to at least watch this and, uh, we could arrange an interview with, uh, with Senator Johnson on his program- Yeah ... that helps a little. Um, but, you know, this stuff has to get out of the bubble. This stuff has to get into the mainstream because this is affecting millions and millions of lives around the world.

Graham Hood: And as we, as we iterated in that interview, John, [01:00:00] there are people dying that need help. Yeah. And that help is being denied them because politicians, bureaucrats, and corporate CEOs are covering their asses-

John Larter: Yeah ...

Graham Hood: because they know they've done the wrong thing. They know they've been caught, uh, with their hand in the cookie jar, that he has just presented all the relevant information to prove that we were lied to.

Graham Hood: Yeah. Deliberately lied to. And, uh, they have to face the music. Now, I keep talking about forgiveness, and I stand by that, but forgiveness doesn't mean that you don't have to face the music. You know? You have to sta- you have to be accountable. If we don't hold people to account, we're enabling bad behavior to continue.

Graham Hood: Mm.

John Larter: Well, sadly, more people are dying, uh, a- and potentially, uh, put at risk, uh, by the failure to act on this now. I mean, how many people are still getting boosters? Uh, so it, it's, it's incumbent on these, uh, bureaucrats and [01:01:00] governments to actually pause and, uh, and, and look at the safety data, uh, look at what's going on in, in the Senate in the US, uh, uh, i- in, in relation to, uh, these investigations.

John Larter: I mean, it's, it's a clear and present danger. That, that, that's the only way you can describe what's going on here. And, uh, you know, I, I, I, I don't know, Woody. I mean, how many people have said that, uh, this is the

worst atrocity in, in human history? But, uh, it seems that unless you, uh, unless you see it through our lens, uh, you, you don't see it.

Graham Hood: You don't see it, and that's the thing. And, you know, as, as, uh, Ron Johnson said, he can't blame anybody for saying, "Can we just move on? And we don't want to hear about this," because- Yeah ... you know, when y- when you've been conned, you know, I think it was, um, um... Oh, a famous, Mark Twain said, "It's a lot easier to con somebody than to convince them that they've been conned."

Speaker 4: Mm.

Graham Hood: But we're not [01:02:00] doing this because we wanna be right. Let's be honest. We're doing this because we need to, we need to make sure we don't leave anyone on the battlefield. Now, as a result of all the things that have gone on, a lot of innocent people who did the right thing because they were told to do it, and a lot of people who were coerced into doing it, are now really struggling.

Graham Hood: Now, we can, we can make our life easy by forgetting all this ever happened and going fishing, but we can't. We can't leave anyone on the battlefield. We can't leave the survivors of infected blood on the battlefield. We can't leave the survivors of, of the pelvic mesh scandal on the battlefield, battlefield.

Graham Hood: We can't leave the, those kids who are suffering from all these disorders as a result of the childhood vaccination scheme and policies. We can't leave the, the victims of the mRNA vaccine on the battlefield. We can't, because if we do that, how can we look at ourselves in the mirror? Mm-hmm. Remember, [01:03:00] Australia, we used to say, "We'll be right.

Graham Hood: We'll be right." Now it's, "I'll be right."

John Larter: And, and all these other victims of social policy, bad social policy, you know, uh, allowing children to think that they're a different sexual orientation and encouraging it, uh,

Graham Hood: this stuff. Encouraging

John Larter: it. Mad.

Graham Hood: Encouraging it. John, encouraging it. Yeah, that's the point.

Graham Hood: Getting, getting kids as young as five to think about their sexuality in school. Criminal. That shouldn't be happening. Mm. And there's a whole bunch of stuff that we haven't even looked at- Oh ... in any great depth yet because we, we haven't, we don't have the time to cover every issue. But you look at the, at the, uh, the child exploitation and, and child slavery, sexual slavery that's going on around the world.

Graham Hood: Clearly now as a result of the Epstein files, we can see that there is a network of child sexual abuse going on around the world. Mm-hmm. Where do you start with that stuff?

Speaker 5: Yeah.

Graham Hood: Where do you start? How do... Where do you [01:04:00] start? I mean, we would... You know, people say to us, "All you guys do is interview and talk.

Graham Hood: There's no solutions." Well, what can we do? All we can do is highlight it so hopefully someone who can implement a solution will see it and act on it. That's all we can do.

John Larter: Well, I, I think the solutions are probably already there, Hoody. I think the problem is is just a recognition that there's a problem to solve.

John Larter: I mean, these people aren't even, aren't even awake to it. Uh, very difficult. Well,

Graham Hood: we, we, we say in our recovery program that Michelle and I have been running for 20 years now, Recovery Road, we say this to everybody, "You cannot heal a wound by saying it's not there."

Speaker 4: Mm.

Graham Hood: You can't. Mm-hmm. And w- we're not out there to make people more anxious.

Graham Hood: We wanna give you, we wanna give you guys hope. There is hope if we, if we come together in truth.

John Larter: Yeah.

Graham Hood: We've gotta come together in truth, not because we wanna be right, because truth will allow censorship to be pulled [01:05:00] back, to allow those doctors and scientists who are all ready now, there are a lot of them have been suspended.

Graham Hood: They're all ready now to come back in and do the work needed to help those vaccine injured and the infected bloods people, all that stuff. It's all waiting to happen, and it's not happening because politicians are gutless. Yeah. And they've been under the thumb of bureaucrats and under the thumb of the big corporate CEOs, and we're seeing this played out.

Graham Hood: You know, John, I, I got a message the other day. There was a meeting in Canada about a week ago. Barack Obama, um, and the Canadian president, Canadian prime minister, and, uh, the son of George Soros. Wow. It was a private meeting. The Canadians are really upset about it. They're infuriated. And, uh, and their prime minister is taking them down a rabbit hole that they're [01:06:00] not gonna be able to climb out of.

Graham Hood: Mm. And they're awake to it. Mm. Another one- And we'll be sending this, we'll be sending this interview to Canada as well ... another comrade prime minister. Another comrade prime minister, who happened used to be, uh, the chair of the, um, Bank of England.

John Larter: There you go.

Graham Hood: I think he was 10 years the chair of the Bank of England.

Graham Hood: Now, how long does a conspiracy theory last these days? About three weeks- Mm ... before it becomes a fact. Now, George Soros is one of the most evil men on the planet, and his son makes him look like a kindergarten kid.

John Larter: Yeah.

Graham Hood: Believe me. And Obama- When do these guys ever just get out of the way?

John Larter: Well, how long until he's, uh, at Kirribilli House with Albo?

John Larter: Can't be far off the agenda. Uh, we've already had, uh, a few, uh, a few grubs turn up there, so...

Graham Hood: Now, [01:07:00] now Johnny, while we're on the subject, while we're on the subject of grubs. I, I was watching some stuff last night on the ABC's response to the One Nation win in, uh, Farrah.

Speaker 4: Yeah.

Graham Hood: Patricia Karvelas- Oh ... if she ever had any credibility prior to that broadcast, she blew it all.

Graham Hood: Mm. She blew it all. She's blaming the people who voted for One Nation for giving them credibility and validating them.

John Larter: Uh, Patricia, dear, oh dear. PK. I'll tell you, what do these people think? I mean, all they do is, is, uh, uh, they, they highlight the issues. Uh, people say, "Oh, well, you know, we're not gonna be told by, uh, Patricia Karvelas how to think." Um, you know, and, and other people will change their mind as well. So they're not doing [01:08:00] themselves any service.

John Larter: And a- and as we said numerous times, Woody, I mean, h- how anyone on the ABC, paid by the government, um, can be allowed to commentate in such a manner is beyond belief. That's- It is beyond belief ... I would leave that to the commercial, commercial entities. Uh, leave that to us. Um, if you wanna be on the public broadcast, I'm afraid you should be, uh, providing a balanced report card.

Graham Hood: And Patricia Karvelas, if you claim to be a journalist, I hope you watch this interview with Senator Ron Johnson and you act on it.

Speaker 4: Mm.

Graham Hood: Because any journalist who knows about this stuff, who doesn't act on it, I'm afraid is as guilty as doctors knowingly injecting people with material that they know is harmful to them without their informed consent.

Graham Hood: If you're not part of the solution, PK, you're part of the problem.

John Larter: Well, get Norman Swan on, interview him, and, uh, ask for his [01:09:00] thoughts on this interview. There's a good idea.

Graham Hood: All right, we better go, Johnny. Um, we're going to, uh, we're gonna... Please share this to... And if you know any politicians, please share it.

Graham Hood: Don't fall for the trap of thinking, "Oh, you know, they won't look at it." We've gotta, we've gotta put it out there anyway. At least we've gotta say that we've done it. Mm. We've gotta share it. Uh, I mean, we- Share it to Carl. Share it to Carl, get him to act on it. Um- Yep ... if he wants us to talk to him through that, if he wants us to arrange Senator Johnson, we will arrange it.

Graham Hood: We will. We don't want any kudos for it.

Speaker 4: Yep.

Graham Hood: Um, we just want this message out there. And, um- You know, the senator clearly needs our support. He's, he's doing what he's doing for America-

Speaker 4: Mm ...

Graham Hood: but in actual fact, he's doing what he's doing for the rest of the free world. Um-

John Larter: Let's set everyone a target, Hoodie.

John Larter: Let's, let's ask everyone out there to make this the most shared thing we've ever put out. Uh- Yeah ... so instead of just opening it up, [01:10:00] everyone that opens it up, share it, and, uh, and let's see where that takes us.

Graham Hood: Absolutely, John. Absolutely. So we're gonna get that out there. Now, uh, our schedule is gonna be a little disrupted over the next, uh, two to three weeks, uh, 'cause, uh, I'm heading overseas as of tomorrow.

Graham Hood: Uh, I'll try and do some things from where I'm at and what I'm doing, and, uh, I'm gonna end up in Florida. I'm hoping to talk to, uh, Dr. Kim Biss, who's on the, uh, the advisory committee for vaccines in America. She's been a guest on our program. I'm hoping to catch up with her in Tampa- Wonderful ... and, uh, get a, get a one-on-one interview with her.

Graham Hood: But we'll keep feeding stuff now. We- we'll probably arrange to have some of our older programs revisited and shared, and, um, and we need to keep this message going now more than ever because everything you've just heard from Senator Johnson is proof positive that we have to keep speaking up. So, uh, Johnny, [01:11:00] um, we'll get another Club Grubbery out as soon as

we can, but please, this is, there's enough in this program to keep it going for a month at least, if not more.

Speaker 5: Definitely. Share, share, share. Johnny, you've often been heard to say... You just couldn't make this stuff up.

Graham Hood: You couldn't make this stuff up. Stay out of the trees, everybody. Can't wait to get back to Australia and, and give you whatever updates I come back with, and thanks for those lovely comments about people watching the Under the Hood program on Reality Check Radio.

Graham Hood: Really appreciate your warmth and your comments. Uh, maybe we'll send this interview to them, too, and see if they can promote it. So we'll see you next time on Club Grubbery. Hang in there, stay out of the trees, and bye for now.
